

● *Index*

- Acrolein, 3
 Additive fixatives, 1
 Alcohol, dehydration, 17–19
 Alignment
 cultured cells, 94
 electron microscope, 123, 124, 135
 resin block for cutting, 54
 Aluminum oxide, rotary pump desiccant, 110
 Anode, definition, 158
 Antigenicity, 76, 77, 80, 90
 Antigens, 71, 76, 80, 89, 90
 Aperture
 condenser lens, 117
 definition, 158
 objective lens, 119, 120
 role in optimizing image, 126
 Astigmatism
 correcting, 124, 132
 definition, 158
 objective lens, 126, 127, 128
 Atomic weights
 definition, 157
 list of, 158
- Backstreaming, 111
 Buffers
 chemical composition, 1, 4
 preparation, 12, 13
 types of, 7
 Buffer tank, 111
 Butvar, 52, 69, 136
- Calibration grids, 151
 Cell suspensions, processing for EM, 96
 Chrome gelatin, 39
 Coagulant fixatives, 1
 Coating grids, 52, 69
- Coating slides, 39
 Cold trap, 130, 132
 Colloidal gold, preparation, 72–4
 Contamination
 in the electron beam, 129, 130
 of protein A-gold, 75
 of resin, 18, 23, 45
 of thin sections, 51, 54, 59, 60, 69, 130, 136
 Contrast
 electron microscope, 119, 120, 122, 126, 135, 136
 fixatives rendering, 1, 3, 4
 photography, 138, 139, 145, 148–50
 thin sections, 51, 58
 Conversion factors, 159, 160
 Copying micrographs, 154
 Cross-over, 115
 Cryofixation, 76
 Cryoultramicrotomy, 76, 80
 Cultured cells, preparation for EM, 93
 Cutting
 semithin sections
 cutting method, 40–4
 glass knives, 34–38
 notes, 45–8
 silver staining, 48–50
 speed, 44, 47
 toluidine blue staining, 45
 use of mesa, 42, 48
 thin sections
 cutting method, 54–9
 notes, 59–62
 pyramid-trimming, 52–4
 ribbons, failure to produce, 59
 speed, 60
 staining, 68
 notes, 68
- Definitions, 157, 158

- Dehydration and embedding
 en bloc staining, 21, 23
 method, 23–5
 notes, 25–7
 rapid schedule, 28
 resins, 19, 20, 22, 23
 summarized schedule, 26–8
- Density, photographic film, 138, 139
- Diamond knives, care of, 58–60
- Dilutions, 161, 162
- DQE, 138
- Electron beam
 coherence, 122
 specimen damage due to, 130, 135, 136
 wavelength, 107, 126
- Electron microscope
 column
 condenser lenses, 115–19
 electron gun, 114, 115
 magnifying lenses, 119
 maintenance and trouble shooting,
 130–33
 objective lens, 119–22
 cross-over, 115
 image optimization, 120, 123–130
 pumps, 107–13
 vacuum measurement, 113
- Electrons
 elastic collisions, definition, 158
 inelastic collisions, contribution to
 electron image, 119, 122
 peripheral, 120–2
- Embedding media, 22, 23
- Empty magnification, 145
- En bloc staining, 21, 23
- Enlargers
 condenser, 146
 diffusion, 146
 point source condenser, 146
- Epon, 22
- Epon/Araldite, 22
- Equivalent and conversion factors, 160
- Exposing negatives 146–8
- Filament
 in electron gun, 114, 115
 life, 115, 122
- Film
 formats for EM, 138
 moisture contamination, 131, 140
 photographic, 136
- processing, 139–43
- Fine needle biopsies, preparation for
 EM 95, 96
- Fixation
 criteria for good ultrastructural
 preservation, 8
 factors affecting, 4–8
 for IEM, 76, 80
 method, 14, 15
 nasal brushings, 97
 rapid schedule, 28
 summarized schedule, 26, 28
 types of fixatives, 1, 3, 4
- Formaldehyde, 3, 4, 13
- Formvar, 60, 69
- Fresnel, 122, 126, 158
- Glass knives, 34–8
- Glutaraldehyde, 3, 12–15
- Grids, coating, 60, 69
- High tension, effects on resolution, 126, 135
- Hydrated chemicals, 161
- Illumination, electron microscope, 103–7
 condenser control, 115–119
 effects on image, 117, 119, 120, 122, 126
- Image
 brightness control, 114
 optimization, 115–22, 123–30, 126, 136
- Immunocytochemistry
 fixatives and resins, 76
 labeling
 control of specificity, 80, 85
 method, 76–9
 problems, 85, 86, 88, 89
 protein A, protein G, protein A/G, 90
 results, 80
 preparation
 colloidal gold, 72–4
 protein A-gold, 74–5
- International system of units (MSKA), 158
- Knife angle, 42, 58, 60
- Lead acetate, 21, 23
- Lead citrate, 62, 64, 68
- Measuring structures on micrographs, 150
- Mesa, 42, 48

- Nasal brushings, preparation for EM, 97–9
- Negatives, exposure of, 143–8
- Noise (electron), 122, 138, 139
- Noncoagulant fixatives, 1
- Normal solutions, 162
- Osmium tetroxide, 1, 3, 13–15
- Paraffin block, preparation for EM, 99, 100
- Paraffin section, preparation for EM, 100, 101
- Paraformaldehyde, 4, 76
- Paraformaldehyde-lysine-periodate, 76
- Peripheral blood (buffy coat), preparation for EM, 94
- Photography
- enlargers, 146
 - factors affecting, 135–8
 - film processing, 139–43
 - films for EM, 138, 139
 - measurements and scale bars, 150–2
 - photographic papers, 150
 - printing, 143–9
 - print processors, 149, 150
 - teaching slides (transparencies), 153, 154
- pH values, 164
- Potassium permanganate, 3
- Record keeping, 163, 164
- Resins
- epoxy, 19, 20, 22, 76
 - lowicryl, 76
 - LR resins, 76
 - methacrylate (glycol methacrylate), 76
- Resolving power, 104–7, 120, 126, 138, 158
- Ruthenium tetroxide, 3
- Scale bars on micrographs, 152
- Size relationships, 152
- Spherical aberration, 120, 122, 158
- Spurr's resin, 22
- Staining
- en bloc
 - lead acetate, 21, 23, 28
 - uranyl nitrate, 21, 23, 28
 - semithin sections
 - silver nitrate, 48–50
 - toluidine blue, 39, 45, 47
 - thin sections
 - lead citrate, 62, 64, 68
 - uranyl acetate, 62–4, 68
- Static eliminator, 53, 54
- Stigmators, 124, 126, 132
- Suppliers, 164–70
- Teaching slides, 153, 154
- Test strip, 143
- Toluidine blue, 39, 40, 45, 47, 100
- Ultrastructural preservation, criteria, 8
- immunoelectron microscopy, 80, 89, 90
- Uranyl acetate, 62–4, 79
- Uranyl nitrate, 23, 28
- Vacuum measurement, 107–9, 111–13, 160
- Voltage
- contrast affected by, 126, 135, 138
 - electron microscope, 107, 114, 115
- Wavelength
- electrons, 107, 126, 152
 - light, 105, 152
