CONTENTS	v
PREFACE	vii
1 LOGIC: PROOFS AND MODELS	1
1.1 Representation plus entailment	1
1.2 Alternative views	4
2 PROPOSITIONAL CALCULUS	6
2.1 Propositional calculus (Hilbert system)	7
2.2 Propositional calculus (Gentzen system)	24
2.3 Propositional calculus (tableau system)	28
3 PREDICATE CALCULUS	35
3.1 Predicate calculus	35
3.2 Problems with classical logic	59
4 THEOREM PROVING	62
4.1 Unification	65
4.2 Theorem proving by backward chaining	74
4.3 Theorem proving by resolution	78
4.4 Connection method theorem proving	103
4.5 Prospects for automatic theorem proving	115

5 MODAL LOGIC	118
5.1 Formal details of possible worlds semantics	121
5.2 Axioms for modal logic	122
5.3 Theorem proving techniques for modal logic	131
5.4 Reasoning about knowledge	151
5.5 Combining knowledge and action	156
5.6 Belief structures	161
6 TEMPORAL REASONING	165
6.1 Modal logics of time	166
6.2 Reification of temporal logic	171
6.3 The situation calculus	176
6.4 Points or intervals?	184
6.5 Review of temporal logics	188
7 NON-MONOTONIC REASONING	189
7.1 Monotonic and non-monotonic inference	189
7.2 Uses of non-monotonic rules	190
7.3 Formal properties of assumption based reasoning	193
7.4 Truth maintenance	212
7.5 Non-monotonic reasoning: theory and implementation	230
8 PROPERTIES	232
8.1 λ -calculus	234
8.2 Montague Semantics	244
8.3 Theorem proving in λ -calculus	251
9 ALTERNATIVE VIEWS	253
9.1 Constructive logic	254
9.2 Fuzzy Logic	265
REFLECTIONS	270
BIBLIOGRAPHY	273
INDEX	276
