

Contents of volume 2

	<i>Preface</i>	xv
	<i>Acknowledgments</i>	xvii
<b>Part I</b>	<b>Interpreting community patterns: process hypotheses</b>	1
1	<i>Competition</i>	3
	What is competition?	4
	The question of resource limitation	8
	Criteria for establishing the operation of competition	16
	Circumstantial evidence of competition	18
	Experimental evidence of competition	41
	Competition among distantly related taxa	56
	Where should we expect competition to occur?	59
	Conclusions	61
2	<i>A case study: interactions among nectarivores</i>	64
	Interactions among hummingbirds	65
	Interactions among other nectarivores	74
	Interactions with distantly related taxa	83
	Conclusions	87
3	<i>Beyond competition: other factors influencing community structure</i>	89
	Individualistic responses of species	91
	Predation	95
	Parasitism	104
	Commensal and mutualistic interactions	111
	Disturbance and chance	112
	The role of history	118
	Multiple pathways to community patterns	122
	Criteria and conditions for alternative processes	137
	Conclusions	139
<b>Part II</b>	<b>Community variation in time and space</b>	141
4	<i>Temporal variation of communities</i>	143
	Views of community equilibrium	144
	General patterns of variation	146
	Responses to environmental variations	153
	Spatial aspects of temporal variation	169
	Long-term changes in populations and communities	174
	Conclusions	196
		ix

x	<i>Contents</i>	
5	<i>Spatial patchiness and scale</i>	200
	Changes in habitat patchiness	201
	Habitat fragmentation	203
	The landscape context of habitat fragments	217
	Fragmentation and the design of natural reserves	223
	The importance of scale	227
	Is there a right scale for studying bird communities?	235
	Conclusions	244
Part III	<b>Prospects</b>	249
6	<i>Concluding comments: future directions in avian community ecology</i>	251
	The role of theory	251
	Future directions for avian community ecology	256
	<i>References</i>	265
	<i>Author index</i>	304
	<i>Subject index</i>	310

Contents of volume 1

	<i>Preface</i>	xv
	<i>Acknowledgments</i>	xvii
Part I	<b>The foundation of avian community ecology</b>	1
1	<b><i>The development of avian community ecology</i></b>	3
	What is community ecology about?	3
	The historical roots of contemporary avian community ecology	5
	The emergence of controversy	12
	General themes of this book	14
2	<b><i>Determining pattern and process: the logical structure of community ecology</i></b>	18
	Pattern and process	18
	The philosophical foundation: hypothesis testing	20
	Hypothesis testing and normal science	30
	Testing hypotheses: an example	31
	Pattern hypotheses and process hypotheses	34
	Conclusions	36
3	<b><i>The importance of methodology</i></b>	37
	Measurement of variables	38
	Comparisons and experiments	54
	Analysis of results	64
	Conclusions	68
Part II	<b>The patterns of avian communities</b>	71
4	<b><i>The assembly of communities</i></b>	73
	Factors influencing community assembly	73
	Assembly rules for communities	78
	Criticism, controversy, and null hypotheses	86
	Other studies of community assembly	94
	Extensions of community assembly	98
	Conclusions	101
5	<b><i>Numbers of species and their abundances</i></b>	102
	Species–area relationships	102
	Patterns of species abundances	118
	Species diversity	122
	Are bird communities saturated?	138
	Conclusions	143
6	<b><i>Niche theory and guilds</i></b>	145
	Niche theory	146
	Guilds and their definition	156
		xi

xii      *Contents*

	Guild classification	159
	Some guild patterns	166
	Conclusions: the utility of niche theory and the guild concept	176
7	<b><i>Ecomorphological patterns of communities</i></b>	180
	Evaluating the premise: does morphology reflect ecology?	181
	Morphology and species-abundance patterns	198
	Niche variation and morphology	201
	Character ratios	202
	Character displacement	218
	Character convergence	224
	Multivariate approaches	226
	A case study: The ecomorphology of Galápagos Ground Finches	229
	Conclusions	238
8	<b><i>Distributional patterns of species</i></b>	241
	Range boundaries and relationships	242
	Distributional patchiness	258
	Distributions on elevational gradients	262
	Distribution-abundance patterns	273
	Conclusions	280
9	<b><i>Habitat distributions of species</i></b>	282
	The basis of habitat distributions: habitat selection	283
	Multivariate analysis of habitat distributions	284
	Temporal and spatial variations in habitat occupancy	296
	The effects of density	299
	Some methodological comments	307
	Conclusions	316
10	<b><i>Resources and their use</i></b>	318
	Resources	319
	Diet-niche relationships	327
	Foraging behaviour and microhabitat use	333
	Individual spatial relationships and interspecific territoriality	348
	Use of nest sites	357
	A case study of resource use: grassland and shrubsteppe birds	360
	Conclusions	370
11	<b><i>Density compensation and niche shifts</i></b>	373
	Community-wide patterns	374
	Density compensation in species populations	380
	Niche shifts and expansion	384
	Morphological character release	395
	A case study: <i>Parus</i> in Europe	398
	Conclusions	404
12	<b><i>Convergence of species and communities</i></b>	407
	The premise of community convergence	409
	Evidence of convergence among species	411
	Guild and community convergence	417
	Conclusions	427
13	<b><i>Bioenergetic approaches to communities</i></b>	430
	The use of biomass measures	432
	Approaches based on energetics	435
	Some patterns of energetics in bird communities	440
	Conclusions	455

<i>Contents</i>	xiii
<b>14</b> <i>A re-examination of the recent history of avian community ecology</i>	458
Trends in the development of avian community ecology 1950–84	458
Concluding comments	464
References	469
Author index	521
Subject index	529
