1 The fearful spheres of Pascal and Parmenides	1
2 Everything an economist needs to know about physics but was probably afraid to ask: The history of the energy concept	11
<i>Energy before “energy”</i> 12 <i>Live force and dead force</i> 16 <i>The motive force of fire</i> 23 <i>The Lapla- cian Dream</i> 26 <i>Some mathematics of conservation principles</i> 30 <i>The “discovery” of the conservation of energy</i> 35 <i>What was discovered?</i> 50 <i>The energetics movement</i> 53 <i>Entropy: More heat than light</i> 59 <i>The awakening from the Laplacian Dream</i> 66 <i>The theory of relativity</i> 77 <i>Quantum mechanics</i> 82 <i>Who’s afraid of the nonconservation of energy?</i> 90	
3 Body, motion, and value	99
<i>The discovery of energy conservation réchauffé</i> 101 <i>Measurement, mammon, momentum, and man</i> 108 <i>Darwinian evolution as metaphor</i> 117 <i>Lineamentrics from Stevin to Whewell</i> 119 <i>Energy as metaphoric syn- thesis</i> 127 <i>Physics off the gold standard</i> 132	
4 Science and substance theories of value in political economy to 1870	139
<i>The metaphor of value</i> 140 <i>Aristotle discovers the economy</i> 144 <i>Two kinds of mercantilism</i> 147

Table of Contents

[More information](#)

viii Contents

- Physiocracy: More wheat than Zeit* 154 *Smith and Say: Cartesian crossroads* 163 *Ricardian vices* 171
Karl Marx and the swan song of substance theories of value 174 *The watershed* 185 *Entr'acte* 191
- 5 Neoclassical economic theory: An irresistible field of force meets an immovable object 193
Classical political economy: Paradoxes of motion 197
Precursors without energy: Canard, Bentham, Cournot 202 *Hermann Gossen and the transition to neoclassical economics* 210 *The marginalist revolution of the 1870s* 217 *The canonical neoclassical model* 222 *Some consequences of a field theory of value* 231 *The sciences were never at war?* 241
Walras, Jevons, Menger 254 *Marshall: More discreet than right* 262 *Neoclassical economics as a species of energetics* 265 *The syndetic stage?* 270 *The imperatives of proto-energetics* 271
- 6 The corruption of the field metaphor, and the retrogression to substance theories of value: Neoclassical production theory 276
A dyybuk named production 280 *Putting square pegs in round holes: Flirting with the conservation of matter* 286
Getting more and more out of less and less: The neoclassical production metaphors 293 *The spurious symmetry of neoclassical theories of production and consumption* 310
The myth of the engineering production function 327
Abandoning the field 332 *Every man his own capital theorist* 334 *Has there been any progress in the theory of value in the 20th century?* 350
- 7 The ironies of physics envy 354
Is economics a science? 356 *Rediscovering the field: Integrability and revealed preference* 358 *The integrability problem and the misunderstood conservation principles* 369 *The age of technique* 372 *Paul Samuelson, scientist* 378 *Why did neoclassical economics cease to seriously emulate modern physical theory?* 386 *Reprise: The underworld of social physics* 394
- 8 Universal history is the story of different intonations given to a handful of metaphors 396
