1 Introduction – From individuals to aggregations: Unifying properties, global framework, and the holy grails of congregation <i>Julia K. Parrish, William M. Hamner, and Charles T. Prewitt</i>	1
1.1 Seeing is believing	1
1.2 Defining a framework	2
1.3 Properties of animal congregations	5
1.4 On adopting new perspectives	6
1.5 Central themes and “big picture” questions	8
1.6 Organization – from measurement to models	9
1.7 What’s next?	13
<b>Part one: Imaging and measurement</b>	15
2 Methods for three-dimensional sensing of animals <i>Jules S. Jaffe</i>	17
2.1 Introduction	17
2.2 Existing methods	19
2.3 Application of three-dimensional measurement techniques to in situ sensing of animal aggregates	25
2.4 Conclusions	35
Acknowledgments	35
3 Analytical and digital photogrammetry <i>Jon Osborn</i>	36
3.1 Introduction	36
3.2 The geometry and process of image capture	37
3.3 Stereoscopy	42
3.4 Tracking	50

viii	<i>Contents</i>	
	3.5 Discussion	51
	3.6 Examples	52
	3.7 Summary	59
4	Acoustic visualization of three-dimensional animal aggregations in the ocean <i>Charles H. Greene and Peter H. Wiebe</i>	61
	4.1 Introduction	61
	4.2 Acoustic visualization	62
	4.3 Field studies: Hypotheses, methods, and results	62
	4.4 Discussion	65
	Acknowledgments	66
5	Three-dimensional structure and dynamics of bird flocks <i>Frank Heppner</i>	68
	5.1 Introduction	68
	5.2 Line formations	70
	5.3 Cluster formations	76
	5.4 Future directions and problems	85
	Acknowledgments	87
	Appendix	87
6	Three-dimensional measurements of swarming mosquitoes: A probabilistic model, measuring system, and example results <i>Terumi Ikawa and Hidehiko Okabe</i>	90
	6.1 Introduction	90
	6.2 Probabilistic model for stereoscopy	91
	6.3 Measuring system for mosquito swarming	96
	6.4 Spatiotemporal features of swarming and the adaptive significance	97
	6.5 Viewing extension of the method	103
	Acknowledgments	104
	<b>Part two: Analysis</b>	105
7	Quantitative analysis of animal movements in congregations <i>Peter Turchin</i>	107
	7.1 Introduction	107
	7.2 Analysis of static spatial patterns	108
	7.3 Group dynamics	110
	7.4 Spatiotemporal analysis	110
	7.5 Conclusion	112
8	Movements of animals in congregations: An Eulerian analysis of bark beetle swarming <i>Peter Turchin and Gregory Simmons</i>	113
	8.1 Introduction	113

<i>Contents</i>		ix
8.2	Congregation and mass attack in the southern pine beetle	114
8.3	An approximate relationship between attractive bias and flux	115
8.4	Field procedure	118
8.5	Results	119
8.6	Conclusion	124
9	Individual decisions, traffic rules, and emergent pattern in schooling fish <i>Julia K. Parrish and Peter Turchin</i>	126
9.1	Introduction	126
9.2	Experimental setup: Data collection	129
9.3	Group-level patterns	132
9.4	Attraction/repulsion structuring	135
9.5	Discussion	138
10	Aggregate behavior in zooplankton: Phototactic swarming in four developmental stages of <i>Coullana canadensis</i> (Copepoda, Harpacticoida) <i>Jeannette Yen and Elizabeth A. Bundoek</i>	143
10.1	Introduction	143
10.2	Methods	145
10.3	Results	151
10.4	Discussion	155
10.5	Conclusions	161
	Acknowledgments	162
	<b>Part three: Behavioral ecology and evolution</b>	<b>163</b>
11	Is the sum of the parts equal to the whole: The conflict between individuality and group membership <i>William M. Hamner and Julia K. Parrish</i>	165
11.1	Introduction	165
11.2	Membership and position	166
11.3	Costs and benefits to the individual	167
11.4	Group persistence	168
11.5	Individuality versus “group” behavior	170
11.6	Cooperation or veiled conflict	171
11.7	Concluding remarks	172
12	Inside or outside? Testing evolutionary predictions of positional effects <i>William L. Romey</i>	174
12.1	Introduction	174
12.2	Where should a flocker be in a group?	176
12.3	Individual differences in location	182
12.4	Differences in selection	183
12.5	Differences in motivation	183

12.6	Balancing motivations	189
12.7	Conclusion	193
	Acknowledgments	193
13	Costs and benefits as a function of group size: Experiments on a swarming mysid <i>Paramesopodopsis rufa</i> Fenton <i>David A. Ritz</i>	194
13.1	Introduction	194
13.2	Study animal	197
13.3	Laboratory conditions	198
13.4	Food capture success versus group size	198
13.5	Swarm volume in different feeding conditions	201
13.6	Food capture versus swarm size in the presence of a threat	202
13.7	Discussion	204
13.8	Conclusions	206
	Acknowledgments	206
14	Predicting the three-dimensional structure of animal aggregations from functional considerations: The role of information <i>Lawrence M. Dill, C. S. Holling, and Leigh H. Palmer</i>	207
14.1	Introduction	207
14.2	Predicting position	208
14.3	Testing the predictions	214
14.4	Null models	215
	Acknowledgments	219
	Appendix	219
15	Perspectives on sensory integration systems: Problems, opportunities, and predictions <i>Carl R. Schilt and Kenneth S. Norris</i>	225
15.1	Introduction	225
15.2	Sensory integration systems	226
15.3	Problems and opportunities	234
15.4	Predictions	238
15.5	Conclusions	243
	Acknowledgments	244
	<b>Part four: Models</b>	245
16	Conceptual and methodological issues in the modeling of biological aggregations <i>Simon A. Levin</i>	247
16.1	Introduction	247
16.2	The problem of relevant detail	249

<i>Contents</i>		xi
16.3	Interacting individuals: From Lagrange to Euler	250
16.4	Cells to landscapes: From discrete to continuous	251
16.5	Evolutionary aspects of grouping	253
16.6	Conclusions	255
	Acknowledgments	256
17	Schooling as a strategy for taxis in a noisy environment	
	<i>Daniel Grünbaum</i>	257
17.1	Introduction	257
17.2	Asocial searching: Taxis from directionally varying turning rates	261
17.3	Simulations of searching with schooling behavior	265
17.4	A nonspatial deterministic approximation to social taxis	273
17.5	Discussion	276
18	Trail following as an adaptable mechanism for popular behavior	
	<i>Leah Edelstein-Keshet</i>	282
18.1	Introduction	282
18.2	Trail following in social and cellular systems	285
18.3	Phenomena stemming from trail following	286
18.4	Minimal models for trail-following behavior	290
18.5	Discussion	297
	Acknowledgments	300
19	Metabolic models of fish school behavior – the need for quantitative observations <i>William McFarland and Akira Okubo</i>	301
19.1	Introduction	301
19.2	Density in mullet schools	304
19.3	Mullet school velocity	304
19.4	Oxygen consumption of swimming mullet	305
19.5	Modeling oxygen consumption within a mullet school	306
19.6	Discussion	310
	Acknowledgments	311
	Symbols	311
20	Social forces in animal congregations: Interactive, motivational, and sensory aspects <i>Kevin Warburton</i>	313
20.1	Introduction	313
20.2	Models of attraction and repulsion	314
20.3	Sensory modalities mediating the attraction–repulsion system	323
20.4	Real-life factors mediating attraction and repulsion, and their effects on group cohesion	327

20.5 Models of attraction and repulsion which describe the effects of motivational change	330
20.6 Conclusion	332
