**Preface** xix  
**List of tables** xxiii  
**Notation** xxvii  

#### 1 Introduction 1  
1.1 What are exact solutions, and why study them? 1  
1.2 The development of the subject 3  
1.3 The contents and arrangement of this book 4  
1.4 Using this book as a catalogue 7  

#### Part I: General methods 9  

#### 2 Differential geometry without a metric 9  
2.1 Introduction 9  
2.2 Differentiable manifolds 10  
2.3 Tangent vectors 12  
2.4 One-forms 13  
2.5 Tensors 15  
2.6 Exterior products and p-forms 17  
2.7 The exterior derivative 18  
2.8 The Lie derivative 21  
2.9 The covariant derivative 23  
2.10 The curvature tensor 25  
2.11 Fibre bundles 27

8 Continuous groups of transformations; isometry and homothety groups 91
8.1 Lie groups and Lie algebras 91
8.2 Enumeration of distinct group structures 95
8.3 Transformation groups 97
8.4 Groups of motions 98
8.5 Spaces of constant curvature 101
8.6 Orbits of isometry groups 104
8.6.1 Simply-transitive groups 105
8.6.2 Multiply-transitive groups 106
8.7 Homothety groups 110
9 Invariants and the characterization of geometries 112
9.1 Scalar invariants and covariants 113
9.2 The Cartan equivalence method for space-times 116
9.3 Calculating the Cartan scalars 120
9.3.1 Determination of the Petrov and Segre types 120
9.3.2 The remaining steps 124
9.4 Extensions and applications of the Cartan method 125
9.5 Limits of families of space-times 126
10 Generation techniques 129
10.1 Introduction 129
10.2 Lie symmetries of Einstein’s equations 129
10.2.1 Point transformations and their generators 129
10.2.2 How to find the Lie point symmetries of a given differential equation 131
10.2.3 How to use Lie point symmetries: similarity reduction 132
10.3 Symmetries more general than Lie symmetries 134
10.3.1 Contact and Lie–Bäcklund symmetries 134
10.3.2 Generalized and potential symmetries 134
10.4 Prolongation 137
10.4.1 Integral manifolds of differential forms 137
10.4.2 Isovectors, similarity solutions and conservation laws 140
10.4.3 Prolongation structures 141
10.5 Solutions of the linearized equations 145
10.6 Bäcklund transformations 146
10.7 Riemann–Hilbert problems 148
10.8 Harmonic maps 148
10.9 Variational Bäcklund transformations 151
10.10 Hirota’s method 152
# Contents

10.11 Generation methods including perfect fluids 152
   10.11.1 Methods using the existence of Killing vectors 152
   10.11.2 Conformal transformations 155

Part II: Solutions with groups of motions 157

11 Classification of solutions with isometries or homotheties 157
   11.1 The possible space-times with isometries 157
   11.2 Isotropy and the curvature tensor 159
   11.3 The possible space-times with proper homothetic motions 162
   11.4 Summary of solutions with homotheties 167

12 Homogeneous space-times 171
   12.1 The possible metrics 171
   12.2 Homogeneous vacuum and null Einstein-Maxwell space-times 174
   12.3 Homogeneous non-null electromagnetic fields 175
   12.4 Homogeneous perfect fluid solutions 177
   12.5 Other homogeneous solutions 180
   12.6 Summary 181

13 Hypersurface-homogeneous space-times 183
   13.1 The possible metrics 183
      13.1.1 Metrics with a $G_6$ on $V_3$ 183
      13.1.2 Metrics with a $G_4$ on $V_3$ 183
      13.1.3 Metrics with a $G_3$ on $V_3$ 187
   13.2 Formulations of the field equations 188
   13.3 Vacuum, $\Lambda$-term and Einstein–Maxwell solutions 194
      13.3.1 Solutions with multiply-transitive groups 194
      13.3.2 Vacuum spaces with a $G_3$ on $V_3$ 196
      13.3.3 Einstein spaces with a $G_3$ on $V_3$ 199
      13.3.4 Einstein–Maxwell solutions with a $G_3$ on $V_3$ 201
   13.4 Perfect fluid solutions homogeneous on $T_3$ 204
   13.5 Summary of all metrics with $G_r$ on $V_3$ 207

14 Spatially-homogeneous perfect fluid cosmologies 210
   14.1 Introduction 210
   14.2 Robertson–Walker cosmologies 211
   14.3 Cosmologies with a $G_4$ on $S_3$ 214
   14.4 Cosmologies with a $G_3$ on $S_3$ 218

18.2 The Ricci tensor on $\Sigma_3$ 277  
18.3 Conformal transformation of $\Sigma_3$ and the field equations 278  
18.4 Vacuum and Einstein–Maxwell equations for stationary fields 279  
18.5 Geodesic eigenrays 281  
18.6 Static fields 283  
\hspace{1cm}18.6.1 Definitions 283  
\hspace{1cm}18.6.2 Vacuum solutions 284  
\hspace{1cm}18.6.3 Electrostatic and magnetostatic Einstein–Maxwell fields 284  
\hspace{1cm}18.6.4 Perfect fluid solutions 286  
18.7 The conformastationary solutions 287  
\hspace{1cm}18.7.1 Conformastationary vacuum solutions 287  
\hspace{1cm}18.7.2 Conformastationary Einstein–Maxwell fields 288  
18.8 Multipole moments 289  

19 Stationary axisymmetric fields: basic concepts and field equations 292  
19.1 The Killing vectors 292  
19.2 Orthogonal surfaces 293  
19.3 The metric and the projection formalism 296  
19.4 The field equations for stationary axisymmetric Einstein–Maxwell fields 298  
19.5 Various forms of the field equations for stationary axisymmetric vacuum fields 299  
19.6 Field equations for rotating fluids 302  

20 Stationary axisymmetric vacuum solutions 304  
20.1 Introduction 304  
20.2 Static axisymmetric vacuum solutions (Weyl’s class) 304  
\hspace{1cm}20.3 The class of solutions $U = U(\omega)$ (Papapetrou’s class) 309  
\hspace{1cm}20.4 The class of solutions $S = S(A)$ 310  
20.5 The Kerr solution and the Tomimatsu–Sato class 311  
20.6 Other solutions 313  
20.7 Solutions with factor structure 316  

21 Non-empty stationary axisymmetric solutions 319  
21.1 Einstein–Maxwell fields 319  
\hspace{1cm}21.1.1 Electrostatic and magnetostatic solutions 319  
\hspace{1cm}21.1.2 Type $D$ solutions: A general metric and its limits 322  
\hspace{1cm}21.1.3 The Kerr–Newman solution 325
## Contents

21.1.4 Complexification and the Newman–Janis ‘complex trick’ 328
21.1.5 Other solutions 329
21.2 Perfect fluid solutions
   21.2.1 Line element and general properties 330
   21.2.2 The general dust solution 331
   21.2.3 Rigidly rotating perfect fluid solutions 333
   21.2.4 Perfect fluid solutions with differential rotation 337

22 Groups $G_2I$ on spacelike orbits: cylindrical symmetry 341
   22.1 General remarks 341
   22.2 Stationary cylindrically-symmetric fields 342
   22.3 Vacuum fields 350
   22.4 Einstein–Maxwell and pure radiation fields 354

23 Inhomogeneous perfect fluid solutions with symmetry 358
   23.1 Solutions with a maximal $H_3$ on $S_3$ 359
   23.2 Solutions with a maximal $H_3$ on $T_3$ 361
   23.3 Solutions with a $G_2$ on $S_2$
      23.3.1 Diagonal metrics 362
      23.3.2 Non-diagonal solutions with orthogonal transitivity 372
      23.3.3 Solutions without orthogonal transitivity 373
   23.4 Solutions with a $G_1$ or a $H_2$ 374

24 Groups on null orbits. Plane waves 375
   24.1 Introduction 375
   24.2 Groups $G_3$ on $N_3$ 376
   24.3 Groups $G_2$ on $N_2$ 377
   24.4 Null Killing vectors ($G_1$ on $N_1$)
      24.4.1 Non-twisting null Killing vector 379
      24.4.2 Twisting null Killing vector 382
   24.5 The plane-fronted gravitational waves with parallel rays
      ($pp$-waves) 383

25 Collision of plane waves 387
   25.1 General features of the collision problem 387
   25.2 The vacuum field equations 389
   25.3 Vacuum solutions with collinear polarization 392
   25.4 Vacuum solutions with non-collinear polarization 394
   25.5 Einstein–Maxwell fields 397
### Table of Contents

#### 25.6 Stiff perfect fluids and pure radiation
- 25.6.1 Stiff perfect fluids 403
- 25.6.2 Pure radiation (null dust) 405

#### Part III: Algebraically special solutions

#### 26 The various classes of algebraically special solutions. Some algebraically general solutions
- 26.1 Solutions of Petrov type II, D, III or N 407
- 26.2 Petrov type D solutions 412
- 26.3 Conformally flat solutions 413
- 26.4 Algebraically general vacuum solutions with geodesic and non-twisting rays 413

#### 27 The line element for metrics with $\kappa = \sigma = 0 = R_{11} = R_{14} = R_{44}$, $\Theta + i \omega \neq 0$
- 27.1 The line element in the case with twisting rays ($\omega \neq 0$) 416
- 27.1.1 The choice of the null tetrad 416
- 27.1.2 The coordinate frame 418
- 27.1.3 Admissible tetrad and coordinate transformations 420
- 27.2 The line element in the case with non-twisting rays ($\omega = 0$) 420

#### 28 Robinson–Trautman solutions
- 28.1 Robinson–Trautman vacuum solutions 422
- 28.1.1 The field equations and their solutions 422
- 28.1.2 Special cases and explicit solutions 424
- 28.2 Robinson–Trautman Einstein–Maxwell fields
- 28.2.1 Line element and field equations 427
- 28.2.2 Solutions of type III, N and O 429
- 28.2.3 Solutions of type D 429
- 28.2.4 Type II solutions 431
- 28.3 Robinson–Trautman pure radiation fields 435
- 28.4 Robinson–Trautman solutions with a cosmological constant $\Lambda$ 436

#### 29 Twisting vacuum solutions
- 29.1 Twisting vacuum solutions – the field equations 437
- 29.1.1 The structure of the field equations 437
- 29.1.2 The integration of the main equations 438
- 29.1.3 The remaining field equations 440
- 29.1.4 Coordinate freedom and transformation properties 441
## Contents

29.2 Some general classes of solutions 442
  29.2.1 Characterization of the known classes of solutions 442
  29.2.2 The case $\partial_\zeta I = \partial_\zeta (G - \partial_\zeta G) \neq 0$ 445
  29.2.3 The case $\partial_\zeta I = \partial_\zeta (G^2 - \partial_\zeta G) \neq 0$, $L_u = 0$ 446
  29.2.4 The case $I = 0$ 447
  29.2.5 The case $I = 0 = L_u$ 449
  29.2.6 Solutions independent of $\zeta$ and $\overline{\zeta}$ 450
  29.3 Solutions of type $N$ ($\Psi_2 = 0 = \Psi_3$) 451
  29.4 Solutions of type $III$ ($\Psi_2 = 0, \Psi_3 \neq 0$) 452
  29.5 Solutions of type $D$ ($3\Psi_2 \Psi_4 = 2\Psi_2^2, \Psi_2 \neq 0$) 452
  29.6 Solutions of type $II$ 454

30 Twisting Einstein–Maxwell and pure radiation fields 455
  30.1 The structure of the Einstein–Maxwell field equations 455
  30.2 Determination of the radial dependence of the metric and the Maxwell field 456
  30.3 The remaining field equations 458
  30.4 Charged vacuum metrics 459
  30.5 A class of radiative Einstein–Maxwell fields ($\Phi_0^0 \neq 0$) 460
  30.6 Remarks concerning solutions of the different Petrov types 461
  30.7 Pure radiation fields 463
    30.7.1 The field equations 463
      30.7.2 Generating pure radiation fields from vacuum by changing $P$ 464
      30.7.3 Generating pure radiation fields from vacuum by changing $m$ 466
      30.7.4 Some special classes of pure radiation fields 467

31 Non-diverging solutions (Kundt’s class) 470
  31.1 Introduction 470
  31.2 The line element for metrics with $\Theta + i\omega = 0$ 470
  31.3 The Ricci tensor components 472
  31.4 The structure of the vacuum and Einstein–Maxwell equation 473
  31.5 Vacuum solutions 476
    31.5.1 Solutions of types $III$ and $N$ 476
    31.5.2 Solutions of types $D$ and $II$ 478
  31.6 Einstein–Maxwell null fields and pure radiation fields 480
  31.7 Einstein–Maxwell non-null fields 481
  31.8 Solutions including a cosmological constant $\Lambda$ 483
### 32 Kerr–Schild metrics

32.1 General properties of Kerr–Schild metrics 485
   32.1.1 The origin of the Kerr–Schild–Trautman ansatz 485
   32.1.2 The Ricci tensor, Riemann tensor and Petrov type 485
   32.1.3 Field equations and the energy-momentum tensor 487
   32.1.4 A geometrical interpretation of the Kerr–Schild ansatz 487
   32.1.5 The Newman–Penrose formalism for shearfree and geodesic Kerr–Schild metrics 489

32.2 Kerr–Schild vacuum fields 492
   32.2.1 The case $\rho = - (\Theta + i \omega) \neq 0$ 492
   32.2.2 The case $\rho = - (\Theta + i \omega) = 0$ 493

32.3 Kerr–Schild Einstein–Maxwell fields 493
   32.3.1 The case $\rho = - (\Theta + i \omega) \neq 0$ 493
   32.3.2 The case $\rho = - (\Theta + i \omega) = 0$ 495

32.4 Kerr–Schild pure radiation fields 497
   32.4.1 The case $\rho \neq 0$, $\sigma = 0$ 497
   32.4.2 The case $\sigma \neq 0$ 499
   32.4.3 The case $\rho = \sigma = 0$ 499

32.5 Generalizations of the Kerr–Schild ansatz 499
   32.5.1 General properties and results 499
   32.5.2 Non-flat vacuum to vacuum 501
   32.5.3 Vacuum to electrovac 502
   32.5.4 Perfect fluid to perfect fluid 503

### 33 Algebraically special perfect fluid solutions 506

33.1 Generalized Robinson–Trautman solutions 506
33.2 Solutions with a geodesic, shearfree, non-expanding multiple null eigenvector 510

### 34 Application of generation techniques to general relativity 518

34.1 Methods using harmonic maps (potential space symmetries) 518
   34.1.1 Electrovacuum fields with one Killing vector 518
   34.1.2 The group $SU(2,1)$ 521
Contents

34.1.3 Complex invariance transformations 525
34.1.4 Stationary axisymmetric vacuum fields 526
34.2 Prolongation structure for the Ernst equation 529
34.3 The linearized equations, the Kinnersley–Chitre B group and the Hoenselaers–Kinnersley–Xanthopoulos transformations 532
34.3.1 The field equations 532
34.3.2 Infinitesimal transformations and transformations preserving Minkowski space 534
34.3.3 The Hoenselaers–Kinnersley–Xanthopoulos transformation 535
34.4 Bäcklund transformations 538
34.5 The Belinski–Zakharov technique 543
34.6 The Riemann–Hilbert problem 547
34.6.1 Some general remarks 547
34.6.2 The Neugebauer–Meinel rotating disc solution 548
34.7 Other approaches 549
34.8 Einstein–Maxwell fields 550
34.9 The case of two space-like Killing vectors 550

35 Special vector and tensor fields 553
35.1 Space-times that admit constant vector and tensor fields 553
35.1.1 Constant vector fields 553
35.1.2 Constant tensor fields 554
35.2 Complex recurrent, conformally recurrent, recurrent and symmetric spaces
35.2.1 The definitions 556
35.2.2 Space-times of Petrov type $D$ 557
35.2.3 Space-times of type $N$ 557
35.2.4 Space-times of type $O$ 558
35.3 Killing tensors of order two and Killing–Yano tensors 559
35.3.1 The basic definitions 559
35.3.2 First integrals, separability and Killing or Killing–Yano tensors 560
35.3.3 Theorems on Killing and Killing–Yano tensors in four-dimensional space-times 561
35.4 Collineations and conformal motions 564
35.4.1 The basic definitions 564
35.4.2 Proper curvature collineations 565
35.4.3 General theorems on conformal motions 565
35.4.4 Non-conformally flat solutions admitting proper conformal motions 567
