References to illustrations, either photographs or drawings, are in italics. References to tables are followed by t.

Significant initial numbers followed by letters are alphabetized under their spellings.

Less important initial numbers are ignored in alphabetizing, e.g.,

3C 273 appears at the beginning of the Cs and M13 appears at the beginning of the Ms.

- Active Galactic Nucleus (AGN), 89
- Advanced X-ray Astrophysics Facility (AXAF), 22
- Alpher, Ralph, 15
- Angel, Roger, 19
- Antlia Cluster of Galaxies, 14
- Arp, Halton, 58
- α Centauri, 1
- AXAF, 22
- A754, 79
- background radiation, 15
- Bahcall, John, 58
- balloons, 49–51
- Bechtold, J., 74
- Big Bang, 55
- Binocular Telescope, 19
- black holes, 13–14
- 3C 55, 82
- radio galaxy, 83
- 3C 256, 83, 94
- UV spectrum, 84
- 3C 267, 81
- radio galaxy, 82
- 3C 273, 58, 65
- 3C 294, 87, 88–9, 92
- 3C 295, 80, 87
- 3C 326.1, 87, 88, 92
- 3C 368, 85
- Cambridge–Cambridge 4-m telescope, 17
- CCDs, 15–16, 23, 81
- Centaurus Cluster of Galaxies, 14
- Cepheids, 5, 5, 6
- charge-coupled device, *see* CCDs
- Cheng, Ed, 25–56
- CMBR, *see* Cosmic Microwave Background Radiation
- Columbus telescope, 19
- cosmic ‘soup,’ 38
- cosmic ‘textures,’ 53
- Cosmic Background Explorer (COBE), cover, 15, 40–9, 50, 54
- cosmic background radiation, 25–56
- Cosmic Microwave Background Radiation (CMBR), cover, 40–52, 54
- brightness spectrum, 42
- temperatures, 41
- cosmic strings, 53
- cosmological constant, 11

INDEX

- dark matter, 53
- Dicke, Robert, 14-15
- Differential Microwave Radiometer (DMR), 40-1
autocorrelation function, 47
far-IR survey map, 48
maps, 45, 46
- Diffuse Infrared Background Experiment (DIRBE), 40-1
- DIRBE, 40-41
- distances
and age, 33
measuring, 1-8, 28-32
relative, 27t
- DMR, *see* Differential Microwave Radiometer
- Doppler shift, 29, 30
- δ Cephei, 5
- dust clouds, intervening, 93
- Einstein, Albert, 11, 31, 53
- European Southern Observatory, 19-20
- event horizon, 33, 38
- extrinsic intervening matter, 93
- Fall, M., 74-5
- Far-Infrared Absolute Spectrophotometer (FIRAS), 40
energy deviation, 44
- fiber optics, 16
- Field, George, 58
- FIRAS, *see* Far-Infrared Absolute Spectrophotometer
- Freedman, Wendy, 7
- galaxies
cluster of, 79
formation, 77-96
most distant, 84-91
photometric evolutionary models, 91-3
radio, 85, 86, 87, 88, 94-96, 94
methods for observations, 80-84
radio emission from, 80
spiral, 3, 4, 5, 7, 7, 23
- Gamow, George, 15
- Geller, Margaret, 12, 13
- Gemini project, 19, 20
- globular clusters, 11, 12
- Great Attractor, 14
- Great Galaxy in Andromeda, 3, 4, 5, 6, 10, 61, 61t
- Gunn, J., 62, 68
- Guth, Alan, 61
- Hazard, C., 74
- Heisler, J., 74
- Hercules (constellation), 12
- Hertzsprung, Ejnar, 11
- Hertzsprung-Russell diagrams, 11
- Hewett, P., 66-7
- High Precision Parallax Collecting Spacecraft (Hipparcos), 2
- Hipparcos spacecraft, 2
- Hot Big Bang, 34
- Hubble, Edwin, 3, 8-9, 29
- Hubble constant, 9
- Hubble diagram, 94-6, 96
radio galaxies, 94
- Hubble Space Telescope, 5, 6, 6, 21, 22, 22, 23
- Hubble's law, 8, 9, 11-12, 31
- Huchra, John, 12, 13
- Humason, Milton, 9
- Hydra Cluster of Galaxies, 14
- inflationary cosmology, 61
- interstellar dust, 61
- Irwin, M., 66, 74
- jansky (unit), 80
- Japanese National Astronomical Observatory, 19
- Keck telescope, 17-18, 18, 20
- Keck II telescope, 17-18, 20
- Keck Northeast Astronomy Consortium, 17
- Keck, W. M., Foundation, 17
- Kibblewhite, E., 66
- Koo, D., 78
- Large Magellanic Cloud, 3, 6, 6
- Leavitt, Henrietta, 5
- Leiden-Berkeley Deep Survey (LBDS), 84
- Local Group, 12
- Lyman continuum, 91t
