Contents

<i>List of figures</i>	vii
<i>List of tables</i>	viii
<i>Contributors</i>	ix
<i>Units and conversions</i>	x
<i>Preface</i>	xi
Part 1 Introduction and background	
1 Introduction: the issue of energy <i>Stephen Dovers</i>	2
2 Historical and current patterns of energy use <i>Stephen Dovers</i>	13
Part 2 Efficiency and conservation	
3 Using energy efficiently in buildings and industry <i>Hugh Saddler</i>	50
4 Energy conservation in transport and urban settlements <i>Peter Newman</i>	76
Part 3 Renewable energy	
5 The nature of renewable energy <i>David Mills and Mark Diesendorf</i>	112
6 Solar thermal energy <i>David Mills</i>	129
7 Wind, biomass and other renewables <i>Mark Diesendorf</i>	150

Part 4 Towards sustainable energy systems

8 Economic policies for sustainable energy use <i>Michael Common</i>	171
9 Towards sustainable energy systems <i>Ian Lowe</i>	194
<i>Index</i>	217

Edited by Stephen Dovers

Table of Contents

[More information](#)*Figures*

2.1 World primary energy use, 1990	17
2.2 Energy use and human well-being	23
2.3 Energy requirements for deliveries to final demand, Australia, 1986–87	33
4.1 Gasoline versus relative transit provision in global cities, 1980	87
4.2 Gasoline use per capita and density in global cities, 1980	90
4.3 Public transport use for journey to work and density by local government area in Melbourne, 1986	91
4.4 Gasoline price and new vehicle efficiency by nation	94
5.1 Total primary energy consumption by fuel, ABARE greenhouse constrained case	122
5.2 Total primary energy consumption by fuel, ABARE unconstrained base case	122
5.3 Total primary energy consumption by fuel, ABARE greenhouse constrained case including solar thermal electricity with storage	123
6.1 Global solar radiation and prime areas of wind energy potential in Australia	130
6.2 Daily thermal output of three solar collector systems, Longreach, Queensland	136
6.3 Daily thermal performance of three solar collector systems, Wagga Wagga, New South Wales	137
6.4 PG&E utility load pattern as a function of time of day and season	141
6.5 Polar collector output pattern as a function of time of day and season	142
8.1 Model of economy–environment linkages	173

Edited by Stephen Dovers

Table of Contents

[More information](#)*Tables*

1.1	Net plant production across selected ecosystems	7
2.1	Estimated human energy use, 10,000 BC to 1990 AD	14
2.2	World primary energy use, 1990	18
2.3	Summary of energy in Australia, 1950–90	27
2.4	Australian energy balance 1990–91	30
3.1	Approximate proportionate end use of energy by sectors and activities	59
4.1	Per capita transport energy use in global cities, 1980	78
4.2	Adjusted average gasoline use per capita in cities by region to account for vehicle efficiency, 1980	80
4.3	Average value for per capita gasoline use in cities by region, 1980	82
4.4	Car ownership and usage and their relation to transit in global cities, 1980	83
4.5	Relative performance and provision of transport modes in global cities, 1980	84
4.6	Intensity of land use in global cities, 1980	88
4.7	Physical planning profile of Australian cities	98
4.8	Physical planning for Australian cities: housing and urban form targets	99
4.9	Physical planning for Australian cities: transport targets	100
4.10	Potential reductions in greenhouse gas emissions from Australian passenger transport, 1990–2005	101
5.1	Summary of renewable energy technologies	113
5.2	Million tonnes carbon emitted by sectors in ABARE greenhouse constrained case	121
7.1	Wind generators of capacity greater than 30 kW operating in Australia in late 1993	152
8.1	Industry Commission carbon tax results for Australia	181
8.2	CPI increases by decile for tax of \$20 per tonne CO ₂	183
8.3	Global carbon taxation: percentage GDP changes	186
9.1	Present costs and future estimates for various technologies	205
