Entries and page numbers in **bold type** refer to where terms defined in the Glossary are printed in **bold** in the text. Page numbers referring only to figures and tables are printed in *italics*.

A

ablation 236
acritarchs 171
adiabatic changes **26**
advection 26
aerosols 29,108–112
Alaska, Cretaceous case study 250–252
albedo 5
  effects of mountains 139
alluvial fans 141
angiosperms 225
anoxic conditions **168**
Antarctic Bottom Water *42*, 43–44, *87*
anthropogenic effects on climate **19**
anticyclonic gyres 39
aphelion 9
Archaea 2, *202*
Archaeopteris 226
Asia
  evidence for climate change 148–153
  present-day climate 143–146
atmosphere
  as a protective filter 13–20
  constituent gases 15, *16*
  controls on carbon dioxide levels 91–93
  energy budget 17–18
  temperature structure *29*
  transport of heat and water 25–38
atmospheric CO_2
  and global climate 234–235
  and vegetation 234–235
atmospheric fronts 33
atmospheric window 17
autotrophic plants **173**

B

back-scattered radiation **109**
bacteria 53, *202*
base pairs in DNA **178**
bicarbonate ion 73
bilaterian life **195**
  radiation of 203
binary fission 176
biogenic silica **140**
biogeochemical cycles 47, 52–52
biolimiting constituents **53**
biological pump 81
biomarkers 168
biomes 67
  geographical distribution of *68*
biota 64
bioturbation 215
boundary layer 218
brine-rejection 43

C

C3 plants 152
C4 plants 152
calcareous sediments 90
Cambrian Explosion 195
  causes of 205–206
  origins of 203–205
  timing of 203
carbohydrates 62
carbon
  and climate 63–64
  in the oceans 78–89
  role in living world 61
carbon compounds (Box 2.1) 62
carbon cycle 61–102
  anthropogenic effects 97–100
  effects of mountain building 139–142
  effects of sediment burial *92*
  fluxes *98*
  geological 89–93
  in balance? 93–94
  marine 71–89
  terrestrial 65–71
  terrestrial and marine residence times 89–93
  timescale 64–93
carbon dioxide
  fluxes 84–89
  in water (Box 2.2) 72–74
  monitoring (Box 2.3) 95–96
  seasonal variations 96
  volcanic emissions 107
carbon fixing 4
  in the ocean 81
carbon isotopes (Box 4.1) 151
  variation in marine carbonates *158*
carbon sinks in Cretaceous 264–265
carbonaceous sediments 90
carbonate compensation depth 84
carbonate ion 73
carbonate platforms 260
  growth of 263–264
carbonate system (Box 2.2) **72**–74
carbonate weathering 77
Carboniferous swamp forests 240–242
cell division (Box 5.3) 179–181
chalk 264

Index
More information

chemical equilibrium 72
chemical weathering 47, 142
of carbonates 77
chemofossils 175–176
chemosynthetic bacteria 56
chlorophyll, concentration variations *79*
chloroplasts 176
chromosomes 172
diploid 178
classification hierarchy (Box 6.1) 207
climate, importance of water's properties (Box 1.4) 23
climate change
Alaskan case study 246–247
effect of aerosols 108–112
effects on ocean currents 121–123
extraterrestrial causes 238
feedback mechanisms 135–136
global change during Tertiary 153–164
climatic forcings, effect of volcanic eruptions *111*
climate models
GEOCARB 156–160, *235*
mountain-forcing model 156–160
steady-state 163
testing the models 160–164
climate reconstructions, using plants 256–258
clock analogy for history of life 196
clouds (Box 1.5) 28–29
coccolithophores *83*
in chalk 264
colonisation of the land 217–227
conduction 14
continental drift 117–130
continental shelves 132
convection 25
in the oceans 45–46
Coriolis effect (Box 1.6) **30**, 31–32
crown groups 203
cycads 225
Cretaceous examples in Alaska 248–249
cyclonic gyres 39

D

$\delta^{13}C$ (Box 4.1) **150**, 151
$\delta^{13}C$ values in chalk 265
Daisyworld 190
decarbonation recations 140
Deccan Traps 112–114
density-driven currents in the deep ocean 25
diamictites 232
diatoms 83
Dickinsonia 185, 201
diploid chromosomes **178**
dissolved inorganic carbon (DIC) 67
dissolved organic carbon (DOC) 67
downwelling 45–46, *47*

E

earlywood 233
Earth
air conditioning system 24–46
comparisons with other planets 1
early life 167–194
eccentricity of orbit 9
extremes 229–270
heating system 24–46
microbial life 2
past environments 167, *171*
Earth's surface temperature pattern 20–23
eccentricity of Earth's orbit 9
Ediacaran faunas 185–187, 195, 200–202
interpretation of 185–186
Ediacaran Period 185
electromagnetic spectrum (Box 1.3) **13**–14
of the Sun and Earth *15*
emergence of life 167–194
enations 224
endosymbiotic hypothesis 176
endothermic reactions **61**
epiorogenic sea-level changes **131**
eukaryotes 167, *202*
architecture and evolution 177–183
beginnings of 174–177
cell division (Box 5.3) 179–181
cell structure 172, *173*
diversification of 183–184
divisions of *174*
eustatic sea-level changes **131**, 133–135
evapotranspiration 27
evolution
altruism in 188–189
rules for 187–191
evolution of life
divergence of major animal groups *199*
plants 217–227
evolution of the leaf (Box 6.4) 223–225
evolutionary faunas 213
evolutionary radiations 195, 212–215
evolutionary record, turnover of life 206–209
exothermic reactions **61**
extremophiles 2

F

false rings 252
feedback mechanisms, *see* positive *and* negative feedbacks
between life and Earth 271–274
in ecosystems 191
fitness 188

More information

fixing of carbon **4**
flood basalts 112–117
and mass extinctions 115–117
foraminiferans *83*
oxygen isotope record *127*, 128, *153*
forcing function 19
forests
Arctic 247
Carboniferous swamp forests 240–242
early evolution 225
legacy of 242–244
forward-scattered radiation **109**
fossil record 195
plants *221*
frontal currents 41

G

Gaia hypothesis (Box 5.4) 190, 271–274
gametes 179
gene duplication 205
general circulation model (GCM) for climate **144**
GEOCARB model 156–164, *235*
glacio-eustasy 262
Global Stratotype Section and Point (GSSP) 195
global surface current system *40*
global warming in Cretaceous 134
Globigerina bulloides 150
glossopterids 243
greenhouse atmosphere 266–267
greenhouse effect 17
greenhouse world
Cretaceous 245–246
Cretaceous volcanism 265–266
gross primary production (GPP) 62
gymnosperms 225
gyres 39

H

Hadley circulation 33
halite (salt) pseudomorphs 253
haploid cells **175**
haploid gametes 179
Hawaiian volcanism 105–107
heat transport by the upper ocean 39–41
herbaceous plants **226**
heterochrony 201
heterotrophs 171
hierarchy of classification (Box 6.1) 207
Himalaya, effect on atmospheric CO_2 154–160
homeostasis 189
Hox genes 205
hydrological cycle 47
hyperthermophiles 2

I

icehouse world 229–233
geological evidence for 232–233
role of plants 244
intermediate geological timescales 64
Intertropical Convergence Zone (ITCZ) 24, 33, *36, 37*
IRONEX II experiment 55
isostasy (Box 3.3) **131**–132
isostatic sea-level changes **131**
isotherms *22*–**23**

K

K/T boundary 169
K/T boundary extinction 212
kerogen 90
kin selection 189
kingdoms of organisms (Box 5.2) 173

L

large igneous provinces, global distribution of *114*
latewood 233
Le Chatelier's principle 74
leaf-area indices 257
leaf evolution (Box 6.4) 223–225
leaf margin analysis 148, 257
leaf physiognomy 147
Lepidodendron 240–242
life on Earth, early fossil evidence 169
lignin 66, 226
long geological timescales 64

M

macrophagy 205
mantle plumes 105
mantle superplume 265
marine snow 81
mass extinction 115–116, 195, 209–212
consequences for ecological relationships 215–216
the 'big five' (Box 6.2) 211–212
Mat world 170–172
meiosis 175, 179
in eukaryotes (Box 5.3) 179–181
mesoscale eddies 40
methane, as a greenhouse gas 99
methane hydrates 99
microbial life, diversity of (Box 1.1) 2
microfossils 170
midvein 223
Milankovich cycles *9*, **10**–12
as forcing function 20
mitochondria 176
mitosis 179
in eukaryotes (Box 5.3) 179–181
model worlds and their climates (Box 3.1) 119–121
molecular clock theory 183, 197
