- ab initio* GW approach 149
ab initio ionic pseudopotentials 151
ab initio molecular dynamics 156
ab initio pseudopotential 58, 151
 Abrikosov lattice 324
 absorption coefficient η 188
 accidental degeneracy 34
 acoustic phonon 66
 adiabatic theorem of quantum mechanics 114
 Aharonov–Bohm phase 116
 Aharonov–Bohm effect 118, 118
 Allen–Dynes Equation 370
 Anderson criterion 390
 Anderson Hamiltonian 390
 Anderson impurity model 390
 anharmonicity 18
 anomalous Hall effect 118, 118
 anticommutation relations 290
 antiferromagnetism 377
 atomic force constant 64
 atomically thin quasi-2D materials 393, 421
 atoms as probes 9
- ballistic transport 399
 band index 33
 band overlap 56
 band structure 32
 band structure of GaAs 61
 band structure of Ge 60
 band structure of ZnSe 62
 band theory for materials 57
 band velocity 48, 49, 52
 bandgap problem in DFT 149
 Bardeen–Pines interaction 330
 basis 24
 BCS (Bardeen–Cooper–Schrieffer) gap equation 337
 BCS (Bardeen–Cooper–Schrieffer) model 337, 360, 366
 BCS (Bardeen–Cooper–Schrieffer) reduced Hamiltonian 331
- BCS (Bardeen–Cooper–Schrieffer) theory 311, 330
 Berry curvature and crystal symmetry 118
 Berry curvature in equation of motion 118
 Berry phase and Berry curvature 114
 Berry phase or geometric phase 114, 116
 Berry vector potential or Berry connection 116
 Bethe–Goldstone equation 327
 Bloch functions 28, 33
 Bloch oscillations 111
 Bloch’s theorem 27
 Bogoliubov–Valatin transformation 340
 Boltzmann equation formalism 264, 267
 Born–Oppenheimer approximation 21, 119
 Bravais lattice 23
 Brillouin zone 26
 bubble diagram 301
 Büttiker–Landauer formalism 405
- carbon nanotube junctions 417
 carbon nanotubes 393, 417
 carbon nanotubes, excitons and optical response 419
 carrier mobility 250
 chiral character, graphene wavefunction 414
 classes of solids 4
 classification of critical points 85
 closed orbit in \mathbf{P} space 239
 coherence length 315, 320
 cohesive energy, alkali metals 138, 139
 collective excitation interactions 18
 collective excitations 6
 collision term in Boltzmann equation 267
 commutation relations 288, 289
 commutation relations, \mathbf{R} and \mathbf{k} operators 105
 complex order parameter 316
 complex refractive index 187
 compound semiconductors 58
 concept of a solid 3
 conductivity σ 185
 conductivity tensor in B field 250
 conservation of crystal momentum 196
 Cooper pair 324, 325
 core electrons 5
 cores 20
 correlation energy 128
 correlation energy, interacting electron gas 128

- Coulomb blockade 406
 Coulomb gauge 194
 Coulomb integral 380
 Coulomb interaction pairing 328
 counting states 53
 creation and destruction operators 288
 critical field H_{c2} 310
 critical field H_{c1} 310
 critical magnetic field 305
 critical points 83, 197
 critical structural transition pressure 153
 crystal electrons in magnetic field 235
 crystal electrons in magnetic field, semiclassical analysis 238
 crystalline solid 3
 Curie temperature 378
 Curie's constant 375
 Curie's law 375
 Curie–Weiss law 378
 current density \mathbf{j} 185, 267
 current–current response function 192
 cyclotron frequency 236
- dc conductivity 192
 de Haas–van Alphen effect 242
 Debye approximation 80
 Debye spectrum 88
 Debye T^3 law 83
 decay of time of an excitation 76
 deformation potential 227
 deformation potential coupling, electron–phonon matrix element in covalent solids 226, 229
 degeneracy 34
 degenerate semiconductors 58
 density functional theory (DFT) 141
 density functional theory, spin-dependent 388
 density of states 79
 density of states of 2DEG in a uniform perpendicular \mathbf{B} field 246
 density of states of impurity 390
 diagrammatic representation 13
 diamagnetism 372
 dielectric constant of an insulator 176
 dielectric function 158, 185, 302
 dielectric matrix 159, 160
 dilation 227
 dipole-allowed optical transitions 198
 dipole-forbidden optical transitions 198
 Dirac equation 5
 Dirac point 413
 direct attractive interaction term, exciton 207
 direct gap materials 197
 direct optical transitions 197
 dispersion curves 9
 dispersion curves for collective excitations 12
 dispersion curves for probes 10
 dispersion curves for quasiparticles 11
 dispersion relation of EM wave in solid 187
 displacement field \mathbf{D} 185
 displacements 63
 drift term in Boltzmann equation 266
 drift velocity in crossed electric and magnetic fields 249
 Drude model 189
 Dulong–Petit law 83
 dynamical matrix 65
 dynamical phase 115
 Dyson's equation 300
- edge states in IQHE 263
 effective charge 20
 effective Hamiltonian theory or approximation 101, 114
 effective Hamiltonian, Bloch or \mathbf{k} -representation 106
 effective Hamiltonian, Wannier or \mathbf{R} -representation 106
 effective mass 7, 50, 52, 304
 effective mass equation, exciton 202, 209, 211
 effective mass tensor 113
 effective mass, electron in \mathbf{B} field 240
 effective mass, geometric expression for electron in \mathbf{B} field 240
 effective single-particle potential in DFT 147
 effects of random impurities and defects in IQHE 261
 Einstein spectrum 83
 electrical resistivity from DFT 157
 electron density operators 130
 electron density waves 126
 electron distribution function $f(\mathbf{k}, \mathbf{r}, t)$ 264
 electron dynamics 101
 electron gas function $F(x)$ 124
 electron gas parameter r_s 122
 electron gas RPA dielectric function 166
 electron pair correlation function $g(\mathbf{r}, \mathbf{r}')$ 130
 electron plasmon dispersion relation 167
 electron probes 8
 electron supercollimation 415
 electron–electron interaction via exchange of phonon 222
 electron–hole interaction 142, 201
 electron–hole pair generation by phonon 221
 electronic density of states, reduced dimensional systems 393
 electronic structure of aluminum 4
 electron–phonon coupling constant from DFT 157
 electron–phonon coupling parameter 304
 electron–phonon interaction 220
 electron–phonon interaction, applications of DFT 156
 electron–phonon matrix element in metals 224
 electron–phonon matrix element in rigid ion model 224
 electron–phonon matrix element M 223
