<i>Preface</i>	<i>page xi</i>
<i>Acronyms and abbreviations</i>	xiii
<i>Principal symbols</i>	xviii
<b>1 Introduction</b>	<b>1</b>
<b>2 The governing systems of equations</b>	<b>6</b>
2.1 The basic equations	6
2.2 Reynolds' equations: separating unresolved turbulence effects	7
2.3 Approximations to the equations	10
<b>3 Numerical solutions to the equations</b>	<b>17</b>
3.1 Overview of basic concepts	17
3.2 Numerical frameworks	23
3.3 Finite-difference methods	51
3.4 Effects of the numerical approximations	58
3.5 Lateral-boundary conditions	96
3.6 Upper-boundary conditions	114
3.7 Conservation issues	116
3.8 Practical summary of the process for setting up a model	116
<b>4 Physical-process parameterizations</b>	<b>119</b>
4.1 Background	119
4.2 Cloud microphysics parameterizations	121
4.3 Convective parameterizations	129
4.4 Turbulence, or boundary-layer, parameterizations	140
4.5 Radiation parameterizations	155
4.6 Stochastic parameterizations	166
4.7 Cloud-cover, or cloudiness, parameterizations	166
<b>5 Modeling surface processes</b>	<b>171</b>
5.1 Background	171
5.2 Land-surface processes that must be modeled	172
5.3 Ocean or lake processes that must be modeled	185
5.4 Modeling surface and subsurface processes over land	187

5.5	Modeling surface and subsurface processes over water	192
5.6	Orographic forcing	192
5.7	Urban-canopy modeling	194
5.8	Data sets for the specification of surface properties	196
<b>6</b>	<b>Model initialization</b>	<b>198</b>
6.1	Background	198
6.2	Observations used for model initialization	199
6.3	Continuous versus intermittent data-assimilation methods	210
6.4	Model spinup	215
6.5	The statistical framework for data assimilation	216
6.6	Successive-correction methods	227
6.7	Statistical interpolation (optimal interpolation)	230
6.8	Three-dimensional variational analysis	231
6.9	Diabatic-initialization methods	233
6.10	Dynamical balance in the initial conditions	236
6.11	Advanced data-assimilation methods	242
6.12	Hybrid data-assimilation methods	248
6.13	Initialization with idealized conditions	249
<b>7</b>	<b>Ensemble methods</b>	<b>252</b>
7.1	Background	252
7.2	The ensemble mean and ensemble dispersion	254
7.3	Sources of uncertainty, and the definition of ensemble members	257
7.4	Interpretation and verification of ensemble forecasts	261
7.5	Calibration of ensembles	269
7.6	Time-lagged ensembles	271
7.7	Limited-area, short-range ensemble forecasting	272
7.8	Graphically displaying ensemble-model products	273
7.9	Economic benefits of ensemble predictions	280
<b>8</b>	<b>Predictability</b>	<b>284</b>
8.1	Background	284
8.2	Model error and initial-condition error	284
8.3	Land-surface forcing's impact on predictability	287
8.4	Causes of predictability variations	288
8.5	Special predictability considerations for limited-area and mesoscale models	290
8.6	Predictability and model improvements	292
8.7	The impact of post processing on predictability	293
<b>9</b>	<b>Verification methods</b>	<b>294</b>
9.1	Background	294
9.2	Some standard metrics used for model verification	295
9.3	More about reference forecasts and their use	299

9.4	Truth data sets: observations versus analyses of observations	300
9.5	Special considerations	301
9.6	Verification in terms of probability distribution functions	306
9.7	Verification stratified by weather regime, time of day, and season	307
9.8	Feature-based, event-based, or object-based verification	309
9.9	Verification in terms of the scales of atmospheric features	312
9.10	The use of reforecasts for model verification	317
9.11	Forecast-value-based verification	317
9.12	Choosing appropriate verification metrics	317
9.13	Model-verification toolkits	318
9.14	Observations for model verification	318
<b>10</b>	<b>Experimental design in model-based research</b>	<b>321</b>
10.1	Case studies for physical-process analysis	321
10.2	Observing-system simulation experiments	323
10.3	Observing-system experiments	328
10.4	Big-Brother–Little-Brother experiments	329
10.5	Reforecasts	330
10.6	Sensitivity studies	331
10.7	Predictive-skill studies	338
10.8	Simulations with synthetic initial conditions	339
10.9	The use of reduced-dimension and reduced-physics models	339
10.10	Sources of meteorological observational data	340
<b>11</b>	<b>Techniques for analyzing model output</b>	<b>343</b>
11.1	Background	343
11.2	Graphical methods for displaying and interpreting model output and observations	343
11.3	Mathematical methods for analysis of the structure of model variable fields	352
11.4	Calculation of derived variables	356
11.5	Analysis of energetics	356
<b>12</b>	<b>Operational numerical weather prediction</b>	<b>358</b>
12.1	Background	358
12.2	Model reliability	360
12.3	Considerations for operational limited-area models	361
12.4	Computational speed	361
12.5	Post processing	362
12.6	Real-time verification	363
12.7	Managing model upgrades and developments	363
12.8	The relative role of models and forecasters in the forecasting process	364

<b>13 Statistical post processing of model output</b>	366
13.1 Background	366
13.2 Systematic-error removal	367
13.3 Weather generators	375
13.4 Downscaling methods	376
<b>14 Coupled special-applications models</b>	378
14.1 Background	378
14.2 Wave height	381
14.3 Infectious diseases	382
14.4 River discharge, and floods	386
14.5 Transport, diffusion, and chemical transformations of gases and particles	389
14.6 Transportation safety and efficiency	393
14.7 Electromagnetic-wave and sound-wave propagation	394
14.8 Wildland-fire probability and behavior	396
14.9 The energy industry	396
14.10 Agriculture	399
14.11 Military applications	399
<b>15 Computational fluid-dynamics models</b>	401
15.1 Background	401
15.2 Types of CFD models	401
15.3 Scale distinctions between mesoscale models and LES models	402
15.4 Coupling CFD models and mesoscale models	403
15.5 Examples of CFD-model applications	405
15.6 Algorithmic approximations to CFD models	405
<b>16 Climate modeling and downscaling</b>	407
16.1 Global climate prediction	408
16.2 Reanalyses of the current global climate	431
16.3 Climate downscaling	432
16.4 Modeling the climate impacts of anthropogenic landscape changes	451
<i>Appendix Suggested code structure and experiments for a simple     shallow-fluid model</i>	456
<i>References</i>	461
<i>Index</i>	523
