A companion to *The Archaeology of Rock-Art* (Cambridge, 1998), this new collection edited by Christopher Chippindale and George Nash addresses the most important component around the rock-art panel – its landscape. *Pictures in Place* draws together the work of many well-known scholars from key regions of the world for rock-art and for rock-art research. It provides a unique, broad and varied insight into the arrangement, location and structure of rock-art and its place within the landscapes of ancient worlds as ancient people experienced them. Packed with illustrations as befits a book about images, *Pictures in Place* offers a visual as well as a literary key to the understanding of this most lovely and alluring of archaeological traces.

**CHRISTOPHER CHIPPINDALE** is a curator for archaeology collections and Reader in Archaeology at the Cambridge University Museum of Archaeology and Anthropology. He is also affiliated to the School of Archaeology and Anthropology, Australian National University, Canberra, and the Rock Art Research Institute, University of the Witwatersrand, Johannesburg, South Africa. He is the author of the prize-winning *Stonehenge Complete* (1st edition 1983; now in its 3rd edition) and the editor of *The Archaeology of Rock-Art* (with Paul S. C. Taçon, Cambridge 2001) and *European Landscapes of Rock-Art* (with George Nash, 2001).

**GEORGE NASH** is a part-time lecturer at the Centre for the Historic Environment, Department of Archaeology, University of Bristol. He is also the technical director of a commercial consultancy, Border Archaeology. Previous publications include *Semiotics of Landscape: Archaeology of Mind* (edited, 1997), *Status, Exchange and Mobility: Mesolithic Portable Art of Southern Scandinavia* (1998) and *Signifying Place and Space: World Perspectives of Rock-Art and Landscape* (edited, 2000).
‘The grave-digger’: sixteenth or seventeenth century AD, engraved image carved into clunch chalk wall, Harlton Church, Cambridgeshire.

Although rock-art, as images made on exposed bed-rock, is rare in the western cultural context, there is much in the way of imagery that is ‘rock-art’ more broadly defined. This figure was carved into the clunch wall of a Cambridgeshire parish church, an artificial open rock surface.

Appearing to show a man in Tudor dress holding a spade, it depicts a human being and the physical means by which he shaped and modified his landscape – but it is not an image of a landscape as such.

Editors’ acknowledgements

The editors thank the contributors for the speedy, good-humoured and efficient way in which they have worked with us. We thank also Mary Baxter, Frances Brown, Jessica Kuper, Neil de Cort and Eva Walderhaug Sætersdal for their assistance in several ways.
Note on radiocarbon dating

Dates given as BC, AD, BP (‘Before Present’) are in calendar years, however they have been arrived at. Dates given as ‘bp’ are uncalibrated radiocarbon determinations, and are measures of ‘radiocarbon years’ that do not equate exactly with calendar years.
