	List of contributors	X111
	Preface	XV
I	EVOLUTIONARY THINKING	1
1	Evolutionary models for technological change JOHN ZIMAN	3
	 1.1 The biological analogies 1.2 The technological 'disanalogies' 1.3 Is 'evolution' compatible with 'design'? 1.4 Artefacts as cultural constructs 1.5 Institutions, roles and behaviour 1.6 Selectionism versus instructionism 1.7 Understanding innovation 	3 5 6 7 8 10
2	Biological evolution: processes and phenomena EVA JABLONKA AND JOHN ZIMAN	13
	 2.1 Darwin's theory today 2.2 Heritable variation 2.3 Multiplication and heredity 2.4 The objects of selection 2.5 Adaptation 2.6 Speciation and macroevolution 2.7 Progress and its ambivalences 	13 15 18 18 21 23 25
3	Lamarckian inheritance systems in biology: a source of metaphors and models in technological evolution EVA JABLONKA	27
	3.1 The genic model3.2 Dysfunctions of the genic model in cultural evolution3.3 Epigenetic inheritance systems (EISs)	27 29 31

vii

viii Contents

	3.4 Induction and selection of epigenetic variations3.5 The 'unit' problem	37 39
4	Selectionism and complexity JOHN ZIMAN	41
	 4.1 Adaptation by selection 4.2 Other selective systems in biology 4.3 Selectionist methodology 4.4 Emergent properties of computer models 	41 44 46 47
	4.5 Complexity theory	49
5	Evolutionary phenomena in technological change JOEL MOKYR	52
	 5.1 Introduction 5.2 Techniques and evolution 5.3 Selection units and replicators 5.4 Vehicles and interactors 5.5 Selection and teleology 5.6 Innovation and adaptation 5.7 Summary: information and selection 	52 53 58 60 61 63 64
6	Selection criteria and selection processes in cultural evolution theories RICHARD NELSON	66
	 6.1 Different perspectives on technological evolution 6.2 Technological change as one aspect of cultural evolution 6.3 Differing views on selection criteria and mechanisms 6.4 Technology as both practice and understanding 	66 66 69 72
II	INNOVATION AS A CULTURAL PRACTICE	75
7	Technological evolution and involution; a preliminary comparison of Europe and Japan ALAN MACFARLANE AND SARAH HARRISON	77
	 7.1 The industrious revolution 7.2 The West-European trajectory 7.3 The decline in the use of domesticated animals in Japan 7.4 The declining use of the wheel in Japan 7.5 The outcome: intensive rice agriculture in Japan 7.6 The puzzle of the different trajectory of Europe and Japan 7.7 Possible reasons for the absence of domesticated animals in Japan 7.8 Theories to explain the declining use of the wheel 	77 77 79 80 81 84 85
8	Stasis in complex artefacts GERRY MARTIN	90
	 8.1 A skilled craft in a sophisticated civilization 8.2 The Japanese sword 8.3 Iron + 0.7% carbon = steel 	90 91 92

8.4 Quench hardening 8.5 Keeping to what has been found, from long experience, to work 98 9 Gothic tales of spandrels, hooks and monsters: complexity, multiplicity and association in the explanation of technological change DAVID TURNBULL 9.1 Explaining technological change 9.2 Two contrasting stories 9.3 The social construction of science and technology 9.4 Thinking with cathedrals 9.5 The power of the template 9.7 Theory and practice 9.8 Analysing artefacts in use 116 10 Path dependence and varieties of learning in the evolution of technological practice 117 9.8 Analysing artefacts in use 118 119 10.1 Introduction: varieties of learning in the evolution of technological practice 110.2 A concrete historical application 110.3 Inquiry by means of computer simulation: the 'Bayesian adaptive rhythm' (BAR) model 110.4 The historical frame and the computational bounds upon inferential learning 110.5 Simulation results 110.6 Some extrapolations 110.7 Instructionist versus selectionist mechanisms in evolution 111 INVENTION AS A PROCESS 113 111 INVENTION AS A PROCESS 115 112 Demystifying the process of invention 111.1 The evolutionary role of the inventor 112.2 Demystifying the process of invention 113 114 Edison's transformative sketches of the Reis telephone 115 Anistorical interlude: Edison, acoustic telegraphy, and the Reis telephone 116 Setches as fossils: taking a palaeontological approach 117 Making maps to find patterns in the fossil record 118 Anarrative overview of Edison's work on the telephone 119 So what do these maps tell us about invention and evolution? 110 Edison as breeder 1110 Edison as breeder 1111 The evolution of adaptive form 1110 DAVID PERKINS		Con	tents	ix
multiplicity and association in the explanation of technological change 101 DAVID TURNBULL 9.1 Explaining technological change 101 9.2 Two contrasting stories 102 9.3 The social construction of science and technology 106 9.4 Thinking with cathedrals 107 9.5 The power of the template 112 9.6 The power of talk 113 9.7 Theory and practice 115 9.8 Analysing artefacts in use 116 10 Path dependence and varieties of learning in the evolution of technological practice 118 PAUL A. DAVID 101 Introduction: varieties of learning in the economics of technology 118 10.2 A concrete historical application 121 10.3 Inquiry by means of computer simulation: the 'Bayesian adaptive rhythm' (BAR) model 122 10.4 The historical frame and the computational bounds upon inferential learning 124 10.5 Simulation results 127 10.6 Some extrapolations 129 10.7 Instructionist versus selectionist mechanisms in evolution 131 III INVENTION AS A PROCESS 135 III INVENTION AS A PROCESS 135 III Invention and evolution: the case of Edison's sketches of the telephone 137 W. BERNARD CARLSON 11.1 The evolutionary role of the inventor 137 11.2 Demystifying the process of invention 138 11.3 A historical interlude: Edison, acoustic telegraphy, and the Reis telephone 139 11.4 Edison's transformative sketches of the Reis telephone 149 11.5 Another historical interlude: Bell, Western Union and Edison's contract 148 11.6 Sketches as fossils: taking a palaeontological approach 149 11.7 Making maps to find patterns in the fossil record 150 11.8 A narrative overview of Edison's work on the telephone 151 11.9 So what do these maps tell us about invention and evolution? 155 11.10 Edison as breeder 157		•		
change DAVID TURNBULL 9.1 Explaining technological change 101 9.2 Two contrasting stories 102 9.3 The social construction of science and technology 106 9.4 Thinking with cathedrals 107 9.5 The power of the template 112 9.6 The power of talk 113 9.7 Theory and practice 115 9.8 Analysing artefacts in use 116 10 Path dependence and varieties of learning in the evolution of technological practice 116 10 Path dependence and varieties of learning in the evolution of technological practice 118 10.1 Introduction: varieties of learning in the economics of technology 118 10.2 A concrete historical application 121 10.3 Inquiry by means of computer simulation: the 'Bayesian adaptive rhythm' (BAR) model 122 10.4 The historical frame and the computational bounds upon inferential learning 124 10.5 Simulation results 127 10.6 Some extrapolations 129 10.7 Instructionist versus selectionist mechanisms in evolution 131 III INVENTION AS A PROCESS 135 11 Invention and evolution: the case of Edison's sketches of the telephone W. BERNARD CARLSON 11.1 The evolutionary role of the inventor 137 11.2 Demystifying the process of invention 138 11.3 A historical interlude: Edison, acoustic telegraphy, and the Reis telephone 139 11.4 Edison's transformative sketches of the Reis telephone 143 11.5 Another historical interlude: Bell, Western Union and Edison's contract 148 11.6 Sketches as fossils: taking a palaeontological approach 149 11.7 Making maps to find patterns in the fossil record 150 11.8 Anarrative overview of Edison's work on the telephone 151 11.9 So what do these maps tell us about invention and evolution? 155 11.10 Edison as breeder 157	9	Gothic tales of spandrels, hooks and monsters: complexity,
