<i>Preface</i>	xv	Molecular genetics	16
<i>Acknowledgements</i>	xvii	Cytogenetics	18
Part I: General methodological concerns		Application of molecular biology in child neuropsychiatry	18
1 Introduction to clinical child neuropsychiatry	3	Reduced optimality in the pre-, peri-, neo- and post-natal periods	18
2 Epidemiological overview	4	General overview	18
Autism	6	The effect of alcohol, toxins and other drugs on the developing brain	20
Asperger syndrome and other autistic-like conditions	6	<i>Alcohol</i>	20
Mental retardation with marked psychiatric problems	7	<i>Lead</i>	20
Behavioural phenotype syndromes	7	<i>Cadmium</i>	20
DAMP (deficits in attention, motor control and perception)	7	<i>Anti-epileptic drugs</i>	20
Dyslexia/dysgraphia/dyscalculia	7	<i>Neuroleptics</i>	21
Tourette syndrome	8	<i>Antidepressants</i>	21
Anorexia nervosa	8	<i>Cocaine and other central stimulants</i>	21
Adolescent onset psychosis	8	<i>Lithium</i>	21
Major neurological disorders with major psychiatric problems	8	<i>Benzodiazepines</i>	21
Summary and conclusion	9	<i>Thalidomide</i>	21
3 Background factors	12	<i>Other drugs</i>	22
Genetic factors	12	Brain damage	22
The longitudinal study of temperament	12	Sociocultural influences	23
Twin studies	13	Familial factors	25
Adoption studies	15	Parental death	25
<i>Adoptees' study</i>	15	Adoption	25
<i>Adoptees' family design</i>	15	Fostering	26
<i>Cross-fostering design</i>	15	Divorce	26
<i>Adopted sibling design</i>	16	One-parent families	27
<i>Parent-offspring adoption design</i>	16	Homosexual parents	27
Family genetic studies	16	Family discord	27
		Deviant family interaction and sexual abuse	28
		Sibling relationships	29
		Other relatives	29
		Psychological factors	29
		4 A brief review of normal development	35
		Developmental milestones	35
		Normal variability	35

Sex differences	35	<i>Early onset</i>	59
Shared attention and social referencing	37	<i>Abnormality of social relatedness</i>	61
More complex forms of social interaction and empathy: the emergence of 'theory of mind'	37	<i>Abnormalities of communication development (including language)</i>	63
Social dysfunction syndromes seen in the light of recent developments in normal social/cognitive psychology	38	<i>Restricted repetitive and stereotyped behaviours, activities and interests</i>	65
Intellectual development	39	<i>Problems which are almost universal but not among the diagnostic criteria</i>	66
Development of handedness	40	<i>Other common problems</i>	67
Some notes on differential diagnostic aspects in relation to motor skills development	40	<i>Cognitive profile</i>	67
		<i>Summary of diagnostic criteria</i>	68
Part II: Clinical disorders		Prevalence	69
5 Mental retardation and other severe learning disorders: an overview	45	Sex ratios	69
Prevalence	45	Associated handicaps	69
Background factors	46	Associated specific medical conditions	70
Background factors in moderate, severe and profound mental retardation (IQ < 50)	46	The pathogenetic chain of events in autism	70
Background factors in mild mental retardation (IQ 50–70)	47	Medical work-up in autism	72
Background factors in borderline intellectual functioning (IQ 71–84)	47	Neuropsychological work-up	73
Summary of background factors in mental retardation	48	<i>Cognition and cognitive strategies in autism</i>	75
The clinical picture in the mental retardation syndromes	49	<i>Recent developments in the field of cognitive neuropsychology and autism</i>	76
Associated handicaps in mental retardation	50	<i>Is psychological testing in autism useful?</i>	79
Psychiatric/behavioural problems in mental retardation	50	Management, treatment and education	80
Medical work-up	51	Specific treatments (including prevention)	80
The neuropsychological work-up	52	Pharmacotherapy	81
Management, treatment and education	52	Non-drug medical/biological treatments	83
Outcome	52	Psychotherapy	83
		Early diagnosis	83
6 Disorders of empathy: autism and autism spectrum disorders (including childhood onset schizophrenia)	54	Home-based approaches	83
General review	54	Education	85
Autism	54	Special education and treatment facilities for people with autism	86
Previous definitions and concepts	54	Outcome in autism	86
Current definitions of autism	54	Atypical autism/autistic-like conditions	88
The clinical picture in autism	59	Childhood disintegrative disorder (Heller dementia infantilis)	88
		Asperger syndrome	90
		Diagnosis and behavioural and physical phenotype	90
		Epidemiology	95
		Background factors	95
		Differential diagnosis	95
		Medical and psychological work-up	96
		Treatment	96
		Outcome	97
		Girls with social deficits and learning problems	97
		Elective mutism	98
		Childhood onset schizophrenia	99
		Paranoid disorder	102

	Contents	ix
7 Disorders involving obsessions and compulsions (including Tourette syndrome and eating disorders)		
Obsessive-compulsive personality disorder	112	DAMP (deficits in attention, motor control and perception) 146
Obsessive-compulsive disorder with and without tics	112	Definition of DAMP 146
Prevalence	113	Epidemiology 148
Diagnosis	114	Sex ratios 149
Clinical picture	114	Background factors 149
Background factors	117	Clinical course and outcome 151
Treatment	118	<i>The infant period</i> 151
Outcome	118	<i>The pre-school years</i> 152
Tourette syndrome	118	<i>The early school years</i> 152
<i>Prevalence</i>	119	<i>Pre-adolescence and adolescence</i> 152
<i>Diagnosis</i>	119	Psychiatric problems in DAMP 153
<i>Behavioural and physical phenotype</i>	120	Intervention and treatment 154
<i>Pathogenesis</i>	120	Long-term follow-up 155
<i>Differential diagnosis</i>	121	The hyperkinetic syndrome 155
<i>Work-up</i>	121	Dyslexia, dysgraphia and dyscalculia 156
<i>Treatment</i>	121	Prevalence 156
<i>Outcome</i>	121	Definitions and overlap with other neuropsychiatric problems 156
Anorexia nervosa	121	Pathogenetic factors 157
Definition	122	Dyscalculia 158
Prevalence	123	Management 159
Sex ratios	124	Outcome 160
Clinical picture	124	Hyperlexia 161
Background factors	126	Speech and language disorders 161
Work-up in anorexia nervosa	128	Prevalence 161
Treatment	129	Sex ratios 161
Outcome	131	Pathogenetic mechanisms 161
Concluding remarks	131	Developmental language delay 163
Bulimia nervosa and other eating disorders	132	Stuttering 163
		Abnormalities of pitch and volume 163
		Semantic-pragmatic disorders 164
		Acquired aphasia with EEG abnormalities 165
8 Deficits in attention, motor control and perception, and other syndromes attributed to minimal brain dysfunction		Landau-Kleffner syndrome 165
Synonyms	138	Prevalence 165
Attention deficits	138	Sex ratios 165
Attention deficit hyperactivity disorder	140	Behavioural and physical phenotype 165
Hyperkinetic syndrome/disorder	143	Diagnosis 165
The distinction of attention deficits from conduct disorder	143	Pathogenesis 166
Specific developmental disorders	145	Work-up 166
Communications disorders	145	Treatment 166
Motor skills disorder/motor perception dysfunction ('clumsy child syndrome')/developmental coordination disorder	145	Outcome 166
Academic skills disorder/learning disorders without mental retardation	146	
		9 Sleep and elimination disorders 173
		Jactatio capitis (nocturna) 173
		Prevalence 173
		Sex ratios 173
		Behavioural and physical phenotype 173
		Pathogenesis 174
		Treatment 174
		Outcome 174

Part IV: Intervention

18 The impact of childhood neuropsychiatric disorders on the family

The effect of neuropsychiatric disorders on the children	323
Sibling reactions	323
Parental reactions	323
Transactional effects	324

19 Interventions and treatments

The impact of diagnosis and information; the psychoeducational approach	326
Parent associations	327
Support groups of other kinds	327
Changing societal attitudes	327
Diets	327
Psychopharmacology	327
Neuroleptics and other so-called antipsychotic drugs	328
