Preface ix

Acknowledgements xiii

1 The developed coastal landscape: temporal and spatial characteristics 1

Introduction 1

The impact of humans through time 3

Stages of landscape conversion through tourism 10

Stages of shore protection 13

Case study: development of an intensively developed coast 16

Recent growth trends 22

2 Altering landforms to suit human needs 27

Introduction 27

Eliminating landforms 29

Altering landforms through use 34

Reshaping landforms 46

Altering landform mobility 56

Actions outside the boundaries of coastal landforms 64

Summary conclusions 65

3 Replenishing landforms 67

Introduction 67

Nourishing beaches 68

Nourishing dunes 93

Nourishing uplands 96

Summary conclusions and new themes for study 97

4 Effects of structures on landforms and sediment availability 98

Introduction 98

Protection structures 98

vi Contents

- Inlet stabilization measures 115
- Marinas and harbors 118
- Pilings and elevated piers 120
- Promenades and boardwalks 122
- Minor beach structures 124
- Sand fences 126
- Buildings 129
- Swimming pools 134
- Roads and parking lots 135
- Artificial islands and environments 136
- Summary conclusions 139

- 5 Characteristics of human-altered coastal landforms 140**
 - Introduction 140
 - Locations of landforms 140
 - Height 145
 - Width 147
 - Orientation 148
 - Topographic variability 148
 - Sediment characteristics 152
 - Mobility 155
 - Distinguishing natural from human-created landforms 156
 - The historical dimension 159
 - The political dimension 162
 - Summary conclusions 163

- 6 Temporal scales of landscape change 165**
 - Introduction 165
 - Effects of storms on evolution of developed coasts 165
 - Effects of climate change 174
 - Cycles of landform change 181
 - Relationship between landform size and longevity 185
 - Conceptual scenarios of evolution of developed coasts 187
 - Summary conclusions 191

- 7 Management programs 192**
 - Introduction 192
 - National programs and incentives 192
 - State/provincial programs 199
 - Regional commissions and plans 205
 - Local programs 206
 - Intergovernmental programs 208
 - Trusts and non-profit organizations 209
 - Problems of establishing programs favorable to beaches and dunes 209
 - Summary conclusions 224

8 Maintaining and enhancing natural features in developed landscapes 225

Introduction 225

Values vs. degree of naturalness 225

Intrinsic values 226

Ecological values 226

Recreation values 233

Flood protection 241

Erosion control 242

Strategies for maintaining and enhancing natural landforms 244

Establishing an appreciation for naturally functioning landscapes 256

Summary conclusions 259

9 Directions for geomorphological research 261

Overview 261

Scales of investigation 262

The need for a new research paradigm 264

Classifying and modeling human altered landforms 266

Assessing temporal scales of investigation 268

Providing bases for policy decisions 270

Developing environmentally compatible alternatives 271

Investigating “traditional” problems 273

Related studies 284

Concluding statement 286

References 287
