

Index

- American option, 6, 7, 151, 173–182, 196
 optimal exercise boundary, 177–179
- American Stock Exchange, 50
- antithetic variates, *see* variance reduction
- arbitrage, 13, 17–19, 106, 116, 120, 132, 174, 175
- ARCH, *see* autoregressive conditional heteroscedasticity
- Asian option, 192–194, 196
- ask price, 4
- asset model
 continuous, 56, 59, 60
 discrete, 54, 55, 60, 151
 incremental, 56
 mean, 56, 60, 64
 second moment, 56, 60
 timescale invariance, 66–69
 variance, 56, 60
- asset-or-nothing option, 169
- at-the-money, 88, 89, 108, 110, 164, 166, 167
- autoregressive conditional heteroscedasticity, 209
- average price Asian call, 192, 231–232
- average price Asian put, 192, 194
- average strike Asian call, 192
- average strike Asian put, 193
- backward difference, 243, 262
- barrier option, 187–191, 196, 197
- Bermudan option, 193–194, 196
- Bernoulli random variable, 22, 24, 153
- bid price, 4
- bid–ask spread, 5, 6, 10, 49, 205
- binary option, *see also* cash-or-nothing option 164
- binomial method, 118, 151–156
 as a finite difference method, 157, 261–263
 convergence, 156
 for American put, 176–177
 for exotics, 194–196
 for Greeks, 157, 159
 oscillation, 156, 157, 262
- bisection method, 123–125, 127, 131, 132
 for implied volatility, 133
- Black–Scholes formula, 80–82, 105, 131
 cash-or-nothing, 164–166
 down-and-out call, 189
 European call, 81, 83, 89
 European put, 81, 83, 92
 geometric average price Asian call, 198
 up-and-out call, 190
- Black–Scholes formulas, 82, 83
- Black–Scholes PDE, 73, 78, 80, 81, 83, 99, 101–103, 165, 166, 239, 251, 257–262
- American put, 174–176
 barrier option, 190
 down-and-out call, 188, 189
 exotic option, 196
 bottom straddle, 4, 8
- Brownian motion, 61, 70
 geometric, 57, 61
- bull spread, 4, 8
- butterfly spread, 8, 17, 83
- cash-or-nothing call option, 163–168
- CBOE, *see* Chicago Board Options Exchange
- central difference, 262
- Central Limit Theorem, 27–28, 38, 54, 55, 68, 74, 75, 142, 144, 154
- Chicago Board Options Exchange, 4, 50
- confidence interval, 57, 58, 60
 historical volatility, 204, 205, 210
 Monte Carlo method, 142–143, 145, 146, 181, 194, 195, 215, 218, 219, 221, 224, 225, 230, 231, 233
- continuous random variable, 22
- continuous time asset model, 56, 59, 60, 154
- continuously compounded rate of return, 70
- control variates, 229 *see also* variance reduction
- convergence in distribution, 27
- correlated random variables, 146
- covariance, 217, 225, 230
- daily returns, 46
- delta, 99–102, 108
 of a European call, 87
 of a European put, 87
- delta hedging, 87, 99, 106, 167
- derivatives, financial, 7
- digital option, 164 *see also* cash-or-nothing option
- discounting for interest, 12, 153
- discrete asset path, 63, 64
- discrete hedging, 88
- discrete random variable, 21
- discrete time asset model, 54, 55, 60, 158
- discrete time asset path, 63–66
- distribution function, 26

dividends, 49, 182
 double barrier option, 191
 down-and-in call, 188, 189
 down-and-in put, 190
 down-and-out call, 187–189, 260–261, 265
 down-and-out put, 190
 drift, 54, 105, 198

efficient market hypothesis, 45–46, 49, 51, 52, 54, 61, 70, 72
 error bar, 143
 error function, 41
 inverse, 41
 European call option, 163
 definition, 1
 delta, 87
 European put option
 definition, 2
 delta, 87
 European-style option, 115, 144, 146, 152
 EWMA, *see* exponentially weighted moving average
 exercise price, 1
 exercise strategy, 180, 181, 183
 exotic option, 7, 187–196, 222
 expected payoff, 115–116, 118–120
 expected value, 21, 22
 expiry date, 1
 exponential distribution, 29, 41
 exponentially weighted moving average, 208

fat tails, 70
 financial derivatives, 7
Financial Times, 5, 135
 finite difference approximation, 146
 finite difference method, 237–251
 available software, 263
 BTCS, 240–247, 249, 252, 257–261, 265
 convergence, 247–249, 260
 Crank–Nicolson, 249–252, 257–261, 265
 for American option, 263
 for Black–Scholes PDE, 257–260
 FTCS, 240–249, 252, 257–260, 265
 instability, 243
 local accuracy, 246–247, 249, 251, 252
 penalty method, 263
 stencil, 242, 244, 249
 upwind, 262
 von Neumann stability, 247–249, 251, 252, 260, 265

finite difference operator, 237–238, 240, 251
 finite element method, 251
 fixed strike lookback call, 192
 fixed strike lookback put, 192
 floating strike lookback call, 192
 floating strike lookback put, 192, 199
 forward contract, 17, 83
 forward difference, 238, 241, 243
 free boundary problem, 182
 FTSE 100 index, 135
 futures contract, 17

gamma, 99, 100
 GARCH, generalized autoregressive conditional heteroscedasticity, 209
 geometric average price Asian call, 197, 198
 geometric Brownian motion, 57, 61
 geometrically declining weights, 208, 210
 Greeks, 99–102
 grid, 239

heat equation, 238–239, 262, 265
 hedging, 74, 76–78, 82, 87–93, 106, 116, 145, 164, 188
 historical volatility, 203–209
 IBM daily data, 208
 IBM weekly data, 208
 maximum likelihood, 206–207, 210
 Monte Carlo, 203–206
 hockey stick, 3, 106, 111, 177, 179

i.i.d., 23, 28, 48, 54, 58, 59, 215, 220
 illiquidity, 94
 implied volatility, 99, 123, 131–137, 203
 in-the-money, 88–91, 108, 110, 163, 164, 167, 174
 independence, 23–24, 216
 independent and identically distributed, *see* i.i.d.
 interest rate, 11–12, 16, 53

kernel density estimation, 36, 38, 40, 48, 66

Law of the Iterated Logarithm, 59
 Lax Equivalence Theorem, 248, 251
 LIFFE, *see* London International Financial Futures & Options Exchange
 linear complementarity problem, 175, 182
 liquidity, 94
 log ratio, 48, 203, 210
 lognormal distribution, 56, 57, 59, 60, 66, 70, 118
 London International Financial Futures and Options Exchange, 5, 135
 London Stock Exchange, 50
 Long-Term Capital Management, 93–94
 lookback option, 191–192, 196
 low discrepancy sequences, 233

market makers, 4
 martingale, 118
