<i>The Independent University of Moscow and Student Sessions at the IUM</i>	page vii
<b>Mysterious mathematical trinities</b> <i>V. I. Arnold</i>	1
<b>The principle of topological economy in algebraic geometry</b> <i>V. I. Arnold</i>	13
<b>Rational curves, elliptic curves, and the Painlevé equation</b> <i>Yu. I. Manin</i>	24
<b>The orbit method and finite groups</b> <i>A. A. Kirillov</i>	34
<b>On the development of the theory of dynamical systems during the past quarter century</b> <i>D. V. Anosov</i>	70
1 New or “renewed” directions	74
2 “Named” problems	126
3 Some other achievements	146
<b>Foundations of computational complexity theory</b> <i>A. A. Razborov</i>	186
<b>The Schrödinger equation and symplectic geometry</b> <i>S. P. Novikov</i>	203
<b>Rings and algebraic varieties</b> <i>M. Reid</i>	211
<b>Billiard table as a playground for a mathematician</b> <i>A. B. Katok</i>	216

<b>The Fibonacci numbers and simplicity of <math>2^{127} - 1</math></b>	243
<i>A. N. Rudakov</i>	
<b>On problems of computational complexity</b>	255
<i>S. Smale</i>	
<b>Values of the <math>\zeta</math>-function</b>	260
<i>P. Cartier</i>	
<b>Combinatorics of trees</b>	274
<i>P. Cartier</i>	
<b>What is an operad?</b>	283
<i>P. Cartier</i>	
<b>The orbit method beyond Lie groups. Infinite-dimensional groups</b>	292
<i>A. A. Kirillov</i>	
<b>The orbit method beyond Lie groups. Quantum groups</b>	305
<i>A. A. Kirillov</i>	
<b>Conformal mappings and the Whitham equations</b>	316
<i>I. M. Krichever</i>	
<b>Projective differential geometry: old and new</b>	328
<i>V. Yu. Ovsienko</i>	
<b>Haken's method of normal surfaces and its applications to classification problem for 3-dimensional manifolds – the life story of one theorem</b>	338
<i>S. V. Matveev</i>
