<i>Foreword</i>	xxiii
<i>Preface</i>	xxv
<b>Chapter 1: Atoms, nuclides and radionuclides</b>	<b>1</b>
<b>1.1 Introduction</b>	<b>1</b>
1.1.1 Radioactivity, from the 1890s to the 1990s	1
1.1.2 On the scope and content of this text	3
1.1.3 Joining a large scale enterprise	4
<i>Nuclear power and nuclear radiation applications</i>	4
<i>Figures from Japan</i>	4
<i>The role of research reactors</i>	5
<b>1.2 An historic interlude: from atoms to nuclei</b>	<b>5</b>
1.2.1 When atoms ceased to be atoms	5
1.2.2 The atomic nucleus	7
<b>1.3 Nuclei, nuclear stability and nuclear radiations</b>	<b>8</b>
1.3.1 The birth of isotopes	8
1.3.2 Mass–energy conversions and the half life	9
1.3.3 From natural to man-made radioisotopes	11
1.3.4 The role of the neutron-to-proton ratio	13
1.3.5 An introduction to properties of radiations emitted during radioactive decays	15
1.3.6 Another nuclear radiation: the neutron	17

vi	<i>Contents</i>	
<b>1.4</b>	<b>Activation processes</b>	<b>19</b>
1.4.1	Nuclear fission reactors	19
1.4.2	Thermal neutron activations	21
1.4.3	Activation and decay	22
1.4.4	Other activation processes	22
	<i>The production of neutron-poor radionuclides</i>	22
	<i>Positron emitters for nuclear medicine</i>	23
<b>1.5</b>	<b>Short and long half lines and their uses</b>	<b>24</b>
1.5.1	Generators for short half life radionuclides	24
1.5.2	Isomeric decays with applications to nuclear medicine	25
1.5.3	Radionuclides with very long half lives	26
1.5.4	The energetics of decays by alpha and beta particle emissions	27
<b>1.6</b>	<b>Parent half lives and daughter half lives</b>	<b>29</b>
1.6.1	Three cases	29
1.6.2	Decay chain calculations	29
1.6.3	Transient and secular equilibrium	30
	<b>Chapter 2: Units and standards for radioactivity and radiation dosimetry and rules for radiation protection</b>	<b>32</b>
<b>2.1</b>	<b>Introduction</b>	<b>32</b>
<b>2.2</b>	<b>Units and standards of radioactivity</b>	<b>32</b>
2.2.1	A summary of their characteristics	32
2.2.2	The curie and the becquerel	34
2.2.3	Secondary standards and secondary standard instruments	35
2.2.4	In-house standards	36
<b>2.3</b>	<b>Radioactivity standards</b>	<b>37</b>
2.3.1	Comments on their production and their purpose	37
2.3.2	The international dimension of radioactivity standards	37
<b>2.4</b>	<b>Radiation dosimetry for radiation protection</b>	<b>38</b>
2.4.1	Absorbed dose limitations	38
2.4.2	Units for exposure, absorbed and equivalent dose	39
2.4.3	Weighting factors, $w_R$ and $w_T$	40

	<i>Contents</i>	vii
<b>2.5</b>	<b>Dose limits</b>	<b>43</b>
2.5.1	The linear hypothesis and the ALARA principle	43
2.5.2	Deterministic and stochastic effects	44
2.5.3	Background doses and their relevance for radiation protection	46
<b>2.6</b>	<b>Radiation protection in the laboratory</b>	<b>49</b>
2.6.1	Classifications of sources and of laboratories	49
2.6.2	Time, distance and shielding	50
2.6.3	Coping with radioactive waste	51
2.6.4	The radiation advisory officer	51
2.6.5	Radiation monitors	52
2.6.6	Guarding against radioactive contamination	54
<b>2.7</b>	<b>Dose rates from alpha, beta and gamma ray emitting radionuclides</b>	<b>54</b>
2.7.1	Rules-of-thumb for work with alpha and beta particles	54
2.7.2	Dose rates from X and gamma radiations	55
	<i>The dose equivalent rate constant, <math>D_{eq}</math></i>	55
	<i>Dose calculations</i>	56
	<b>Chapter 3: Properties of radiations emitted from radionuclides</b>	<b>59</b>
<b>3.1</b>	<b>Tools for applications</b>	<b>59</b>
<b>3.2</b>	<b>Properties of alpha particles</b>	<b>59</b>
3.2.1	The nature and origin of alpha particles	59
3.2.2	Alpha particle interactions with matter	61
3.2.3	Ionisation intensities of alpha particles	62
<b>3.3</b>	<b>Properties of beta particles</b>	<b>63</b>
3.3.1	Beta particles and electrons	63
3.3.2	Beta particle applications	65
3.3.3	The scattering and backscattering of beta particles	65
3.3.4	An introduction to beta particle spectra	66
3.3.5	Surface density	67
<b>3.4</b>	<b>Properties of gamma rays and X rays</b>	<b>68</b>
3.4.1	Gamma rays and their decay data	68
3.4.2	X rays	69
3.4.3	Three types of gamma ray interactions	70

viii	<i>Contents</i>	
3.4.4	Photon attenuation, an overview	72
3.4.5	Attenuation equations for narrow beam geometry	73
3.4.6	Photon attenuation measurements using $\mu_m$	74
<b>3.5</b>	<b>Pulse height spectra due to alpha particles and gamma rays</b>	<b>75</b>
3.5.1	The response of detectors	75
3.5.2	Alpha particle spectra	77
3.5.3	Gamma ray spectra	78
<b>3.6</b>	<b>Electron capture (EC), gamma rays and conversion electrons</b>	<b>79</b>
3.6.1	EC decays and their use as quasi-pure gamma ray emitters	79
3.6.2	The internal conversion process	81
<b>3.7</b>	<b>The role of mass energy in determining nuclear decays</b>	<b>82</b>
3.7.1	Neutron-poor radionuclides	82
3.7.2	Positron decay and positron tomography	82
3.7.3	Multi gamma ray emitters	84
3.7.4	Three-pronged decays	87
<b>3.8</b>	<b>Bremsstrahlung</b>	<b>88</b>
3.8.1	Its origin	88
3.8.2	Bremsstrahlung intensities	88
<b>3.9</b>	<b>Fluorescent radiations</b>	<b>89</b>
3.9.1	Fluorescent X rays	89
3.9.2	Inner shell transitions	91
3.9.3	Auger electrons and fluorescent yields	94
	<b>Chapter 4: Nuclear radiations from a user's perspective</b>	<b>95</b>
<b>4.1</b>	<b>The penetrating power of nuclear radiations</b>	<b>95</b>
<b>4.2</b>	<b>Radioactive sources</b>	<b>96</b>
4.2.1	Radionuclides and their decay schemes	96
4.2.2	Source making and counting procedures	97
	<i>Laboratory equipment</i>	97
	<i>Procedures for making thin sources</i>	98
4.2.3	Sealed sources	99
4.2.4	Liquid scintillation counting to minimise source self-absorption	100

	<i>Contents</i>	ix
<b>4.3</b>	<b>Gamma ray applications</b>	<b>101</b>
4.3.1	The role of electronic instruments	101
4.3.2	NIM bin and portable equipment	103
4.3.3	Comments on instrumentation and its supply	104
<b>4.4</b>	<b>Gamma ray counting with NaI(Tl) detectors</b>	<b>106</b>
4.4.1	Further comments on NaI(Tl) detectors	106
	<i>NaI(Tl), an inorganic scintillation detector</i>	106
	<i>Selected characteristics of integral assemblies</i>	106
	<i>Total efficiencies and peak-to-total ratios</i>	107
4.4.2	Integral counting	108
4.4.3	Peak counting	110
4.4.4	Precautions to avoid errors due to Compton scatter	110
<b>4.5</b>	<b>Corrections and precautions, part 1</b>	<b>113</b>
4.5.1	A summary	113
4.5.2	Dead time corrections	113
4.5.3	Pulse pile-up, random and coincidence summing	114
	<i>Randomly occurring effects</i>	114
	<i>Coincidence summing</i>	116
4.5.4	Decay corrections	117
<b>4.6</b>	<b>Corrections and precautions, part 2</b>	<b>117</b>
4.6.1	Unwanted radiations, a summary	117
4.6.2	Radioactive parents and daughters	117
4.6.3	Radionuclidic impurities	118
4.6.4	The gamma ray background	119
4.6.5	The alpha and beta particle background	121
	<b>Chapter 5: Ionising radiation detectors</b>	<b>123</b>
<b>5.1</b>	<b>Radiation detectors, a summary</b>	<b>123</b>
<b>5.2</b>	<b>Characteristics of ionisation detectors</b>	<b>123</b>
5.2.1	Saturation currents and gas multiplication	123
5.2.2	Three saturation chambers	124
5.2.3	Parallel plate and cylindrical chambers	126
<b>5.3</b>	<b>Proportional and Geiger–Müller counters</b>	<b>126</b>
5.3.1	Thin wire counters	126
	<i>Operating principles</i>	126

x	<i>Contents</i>	
	<i>Ion multiplication by collision</i>	128
5.3.2	The Geiger–Müller counter	130
5.3.3	The proportional counter	131
	<i>The proportional region</i>	131
	<i>Unsealed 4<math>\pi</math> windowless proportional counting</i>	132
	<i>Alpha and beta particle counting</i>	132
<b>5.4</b>	<b>Other detectors and detection methods</b>	<b>132</b>
5.4.1	A matter of emphasis	132
5.4.2	Liquid scintillation (LS) counting	133
	<i>Introduction</i>	133
	<i>Quenching agents</i>	133
	<i>Comments on LS counting procedures</i>	135
5.4.3	Microcalorimetry for routine activity measurements	136
	<i>Counting decays with thermal power</i>	136
	<i>Microcalorimetry for nuclear radiation applications</i>	136
5.4.4	Neutron detection for scientific and industrial applications	138
	<i>An overview</i>	138
	<i>Proportional counting</i>	138
	<i>Measurements using high-intensity neutrons</i>	139
<b>5.5</b>	<b>An introduction to semiconductor detectors</b>	<b>139</b>
5.5.1	A few historical highlights on energy spectrometry	139
5.5.2	Characteristics of germanium and silicon detectors	140
5.5.3	Lithium drifted and high-purity germanium detectors	143
5.5.4	Further comments on silicon detectors	143
5.5.5	Detectors made from crystals of semiconducting compounds	144
5.5.6	Energy resolution	145
5.5.7	A postscript on semiconducting detectors	146
<b>Chapter 6:</b>	<b>Radioactivity and countrate measurements and the presentation of results</b>	<b>147</b>
<b>6.1</b>	<b>An introduction to radioactivity measurements</b>	<b>147</b>
6.1.1	Problems	147
6.1.2	A role for secondary standard instruments	148
<b>6.2</b>	<b>Comments on the preparation of radioactivity standards</b>	<b>149</b>
6.2.1	Problems with beta particle emitters	149

	<i>Contents</i>	xi
6.2.2	Accurate radioactivity measurements	149
<b>6.3</b>	<b>4<math>\pi</math>γ pressurised ionisation chambers</b>	<b>151</b>
6.3.1	Introduction	151
6.3.2	Two types of 4 $\pi$ γ pressurised ionisation chambers	151
6.3.3	Dose calibrators	153
6.3.4	General purpose pressurised ionisation chambers	155
	<i>Their role as precision instruments</i>	155
	<i>Activity calibrations</i>	156
	<i>The calibration graph</i>	159
<b>6.4</b>	<b>Gamma ray spectrometers and gamma ray spectrometry</b>	<b>159</b>
6.4.1	Towards multi gamma ray spectrometry	159
6.4.2	Escape peaks	160
6.4.3	Energy calibrations	162
6.4.4	Energy resolution	162
6.4.5	Full energy peak efficiency calibration	163
	<i>Introduction</i>	163
	<i>Preparatory procedures</i>	163
	<i>The calibration</i>	163
6.4.6	Secondary standard instruments: strong and weak points	164
<b>6.5</b>	<b>Results, part 1: collecting the data</b>	<b>166</b>
6.5.1	Five components for a complete result	166
6.5.2	Errors and uncertainties	167
<b>6.6</b>	<b>Results, part 2: Poisson and Gaussian statistics</b>	<b>168</b>
6.6.1	A first look at statistical distributions	168
6.6.2	The Poisson distribution	169
6.6.3	Gaussian statistics	171
6.6.4	Confidence limits	174
<b>6.7</b>	<b>Other characteristics of results and statistical tests</b>	<b>175</b>
6.7.1	Countrates and their combination	175
6.7.2	Tests for accuracy and consistency	176
	<i>Accuracy</i>	176
	<i>Consistency</i>	177
6.7.3	Tests for randomness	177
<b>6.8</b>	<b>Moving on to applications</b>	<b>179</b>

xii	<i>Contents</i>	
<b>Chapter 7: Industrial applications of radioisotopes and radiation</b>		<b>181</b>
<b>7.1 Introduction</b>		<b>181</b>
7.1.1 A change of emphasis		181
7.1.2 An overview of industrial applications		181
<i>Summary</i>		181
<i>Optimisation and control of processes in industrial plant</i>		182
<i>Plant diagnostics</i>		182
<i>Testing and inspection of materials</i>		182
<i>Composition and structure of materials</i>		183
<i>Modification and syntheses of materials</i>		183
<i>Environmental applications</i>		183
<b>7.2 Scientific and industrial applications of gamma rays</b>		<b>186</b>
7.2.1 Applications employing gamma ray attenuation		186
<i>Nucleonic gauges</i>		186
<i>Level gauges</i>		187
<i>Optimum choice of the radioactive source</i>		187
<i>Density gauges</i>		189
<i>Mineral processing</i>		192
<i>Coastal engineering</i>		192
<i>Radiography</i>		192
<i>Computerised tomography (CT)</i>		193
<i>Column scanning</i>		198
<i>On-line measurement of ash in coal</i>		198
7.2.2 Applications based on gamma ray backscatter		201
<i>Backscatter gauges</i>		201
<i>Borehole logging using backscattered <math>\gamma</math> rays</i>		201
7.2.3 Applications based on X ray fluorescence		204
<i>Introduction</i>		204
<i>X ray fluorescence analysis</i>		204
<i>Portable X ray fluorescence gauges</i>		206
<i>Applications to the mineral processing industry</i>		207
<b>7.3 Scientific and industrial applications of beta particles and electrons</b>		<b>207</b>
7.3.1 Attenuation of beams of beta particles and electrons		207
<i>Applications in paper manufacture</i>		208
7.3.2 Industrial applications of beta particle backscatter		208
7.3.3 Special applications: electron microscopy		209

	<i>Contents</i>	xiii
<b>7.4</b>	<b>Scientific and industrial applications of neutrons</b>	<b>211</b>
7.4.1	Comments on work with neutrons and neutron doses	211
7.4.2	Industrial applications of neutron sources	211
	<i>Neutron sources</i>	211
	<i>Neutron moderation</i>	215
	<i>Neutron backscatter gauges</i>	216
	<i>Neutron moisture meters</i>	216
	<i>Borehole logging with neutrons</i>	217
	<i>Neutron radiography</i>	218
7.4.3	Neutron diffraction	219
7.4.4	Neutron activation analysis (NAA)	220
	<i>An overview</i>	220
	<i>Prompt neutron activation analysis</i>	220
	<i>Instrumented neutron activation analysis</i>	221
	<i>Other comments</i>	222
<b>7.5</b>	<b>Scientific and industrial applications of protons and alpha particles</b>	<b>222</b>
7.5.1	Introduction	222
7.5.2	Multi element analyses	222
7.5.3	Thin layer activation	223
7.5.4	Smoke detectors	224
<b>7.6</b>	<b>Scientific and industrial applications of the absorption of radiation</b>	<b>224</b>
7.6.1	The chemical effects of radiation	224
7.6.2	Radiation chemistry of aqueous solutions	226
	<i>Basic processes</i>	226
	<i>Chemical dosimetry</i>	226
7.6.3	Industrial applications of high-energy radiation	228
	<i>Introductory comment</i>	228
	<i>Radiation induced polymerisation</i>	228
	<i>Effects of high-energy radiation on polymers</i>	229
7.6.4	Radiation sterilisation	230
	<i>Introduction</i>	230
	<i>Sterilisation of disposable medical products</i>	230
	<i>Other applications</i>	231
7.6.5	Food irradiation	231
<b>Chapter 8:</b>	<b>Application of tracer technology to industry and the environment</b>	<b>232</b>

xiv	<i>Contents</i>	
<b>8.1</b>	<b>Introduction</b>	<b>232</b>
8.1.1	Radiotracers come on the scene	232
8.1.2	Radiotracers: their advantages and their problems	233
	<i>The advantages of radiotracers, a summary</i>	233
	<i>Radiation safety</i>	235
8.1.3	The evolution of radiotracer applications	237
	<i>Early examples of tracer applications</i>	237
	<i>Recent advances</i>	237
<b>8.2</b>	<b>Tracer applications in the field</b>	<b>238</b>
8.2.1	The general concept of the radiotracer experiment	238
8.2.2	Choice of the optimum radiotracer: general considerations	240
	<i>Introduction</i>	240
	<i>Water tracing</i>	241
	<i>Sand and sediment tracing</i>	242
	<i>Industrial tracing</i>	242
8.2.3	Isotope injections	243
8.2.4	Tracer detection and monitoring in the field	243
	<i>Field monitoring systems</i>	243
	<i>The role of scattered radiation in the monitoring of radiotracers</i>	244
	<i>Accurate field measurements</i>	245
<b>8.3</b>	<b>Applications of tracer technology to flow studies</b>	<b>246</b>
8.3.1	General principles	246
	<i>Introduction</i>	246
	<i>Residence time distribution (RTD)</i>	246
	<i>Mean residence time (MRT)</i>	247
	<i>Complete mixing</i>	247
8.3.2	Flow rate measurements: an overview	248
8.3.3	Flow rate measurements: transit time techniques	248
	<i>Pulse velocity method</i>	248
	<i>Correlation methods</i>	250
8.3.4	Flow rate measurements: tracer dilution methods	250
	<i>Introduction</i>	250
	<i>Tracer injection at a constant rate</i>	250
8.3.5	Flow rate measurements: total sample method	252
	<i>Principle of the method</i>	252
	<i>Case study: gas flow rate measurement</i>	252

<i>Contents</i>	xv
<i>Optimising accuracy</i>	253
8.3.6 Flow rate measurements: total count method	254
8.3.7 Residence time distribution	255
8.3.8 Residence time distribution: idealised plug flow	255
8.3.9 Residence time distribution: idealised stirred flow	257
<i>Stirred flow</i>	257
<i>An example from the gold extraction industry</i>	258
8.3.10 A comment on modelling complex flows	258
<b>8.4 Industrial applications of tracers: case studies</b>	<b>260</b>
8.4.1 Introduction	260
8.4.2 Fluidised catalytic cracking unit	260
8.4.3 Radiotracers in the iron and steel industry	262
8.4.4 Inventories	263
<i>Accurate measurements of activity ratios</i>	263
<i>Mercury inventories</i>	264
<b>8.5 Conclusions</b>	<b>265</b>
<b>Chapter 9: Radionuclides to protect the environment</b>	<b>267</b>
<b>9.1 Introduction</b>	<b>267</b>
<b>9.2 The investigation of environmental systems</b>	<b>272</b>
9.2.1 Numerical modelling	272
9.2.2 Applications of radioisotopes	278
<b>9.3 Environmental applications of radioisotopes</b>	<b>279</b>
9.3.1 Introduction	279
9.3.2 River flow measurements	279
<i>The total sample method using tritium</i>	279
<i>The total count method</i>	281
9.3.3 Studies of the dispersion of contaminants	284
<i>Competition for environmental resources</i>	284
<i>Dispersion of contaminants</i>	284
<i>An analytical treatment of dispersion</i>	286
9.3.4 A case study: sewage dispersion	286
9.3.5 Applications of tracer techniques to sediment and sand tracing	289
<i>Measurements of migration rates</i>	289

xvi	<i>Contents</i>	
	<i>Coastal engineering demonstrations</i>	289
	<i>Detector calibration</i>	292
	<i>Suspended sediment gauges</i>	293
<b>9.4</b>	<b>Applications of naturally occurring radioisotopes</b>	<b>294</b>
9.4.1	Man-made versus environmental radioisotopes	294
9.4.2	Erosion studies	294
	<i>A new use for caesium-137</i>	294
	<i>Procedures and applications</i>	295
	<i>An interesting result</i>	297
	<i>Other techniques</i>	297
9.4.3	Groundwater	298
	<i>Introduction</i>	298
	<i>Groundwater resource evaluation</i>	298
	<i>Locations of recharge areas</i>	299
	<i>The dating of underground water</i>	300
	<i>Accelerator mass spectrometry</i>	301
