

Number Theory
Paris 1992–93

Table des Matières

K. ALLADI
Decomposition of the integers as a direct sum of two subsets..... 1

Y. ANDRÉ
Théorie des motifs et interprétation géométrique des valeurs p -adiques de G -functions (une introduction).....37

N. BOSTON
A refinement of the Faltings–Serre method.....61

J. BOXALL
Sous-variétés algébriques de variétés semi-abéliennes sur un corps fini..69

P. COHEN
Propriétés transcendantes des fonctions automorphes81

E. FOUVRY et M. Ram MURTY
Supersingular primes common to two elliptic curves.....91

V. GRITSSENKO
Arithmetical lifting and its applications..... 103

G. HARMAN
Towards an arithmetical analysis of the continuum 127

H. HIDA
On Λ -adic forms of half integral weight for $SL(2)/\mathbb{Q}$ 139

J. MARTINET
Structures algébriques sur les réseaux 167

H. OUKHABA
Construction of elliptic units in function fields 187

I. PAYS
Arbres, ordres maximaux et formes quadratiques entières209

T.N. SHOREY
On a conjecture that a product of k consecutive positive integers is never equal to a product of mk consecutive positive integers except for $8.9.10 = 6!$ 231

P. STEVENHAGEN
Rédei-matrices and applications245

R. TIJDEMAN
Decomposition of the integers as a direct sum of two subsets.....261

Y.G. ZAHIRIN
CM Abelian varieties with almost ordinary reduction.....277
