- α -mixing, *see* mixing conditions
- AR model, 137
- ARMA memory index, 139-141
- ARMA model, 138
- ARMAX model
 - linear, 139, 154-155
 - nonlinear, 152-153, 165-168
- ARX model, 139, 165
- asymptotic normality of estimators, 65-67
 - ARMAX models, 160-164, 167-168
 - kernel regression, 217-225, 227-230
 - M-estimators, 77-78
 - maximum likelihood, 77
 - nonlinear regression, 69-71, 74-75
- autocorrelation test, 176-178

- base, 122
- bias reduction of kernel estimators, 221, 223
- Borel field, 1
 - Euclidean, 4
 - minimal, 3
- Borel measurability, 7-10
- Borel set, 4, 181
- Borel-Cantelli lemma, *see* convergence of random variables
- boundary of a set, 180-181
- Box-Cox transformation, 62
- Brownian bridge, 185
- Brownian motion, *see* Wiener process

- central limit theorems
 - functional central limit theorem, 185, 187, 193
 - i.i.d. random variables, 33
 - Liapounov, 33-34
 - martingale differences, 116-117
- characteristic functions, 14-15
 - convergence, 31
 - inversion formula, 15
- Chebyshev's inequality, *see* inequalities
- closure of a set, 181
- cointegrated system, 205
- cointegrated vectors, 205-211
- cointegration, 179, 203-205

- conditional expectation
 - identification, 50, 55-59
 - properties, 52-53, 112
 - relative to a Borel field, 110-113
 - relative to a random vector 48-49
- conditional M-test, *see* M-test
- consistency of estimators, 63-64
 - ARMAX models, 157-159, 167
 - asymptotic variance, 71, 164, 168
 - kernel regression, 215-217, 226-229, 244
 - M-estimators, 78
 - maximum likelihood, 77
 - Newey-West estimator, 198
 - non-linear regression, 69, 73-74
- consistent test, *see* M-test
- convergence of distributions
 - asymptotic normality, 31
 - Borel measurable transformations, 37-39
 - continuous transformations, 29-30, 34-36
 - convergence in probability, 28-29
 - convergence of characteristic functions, 31
 - convergence of expectations, 27
 - mean process, 131
 - proper heterogeneity, 131
 - proper pointwise, 27, 73
 - proper setwise, 37-38, 74
 - weak convergence, 182-183, 187
- convergence of mathematical expectations, 25-26
 - characteristic functions, 31
 - convergence of distributions, 27, 34
 - dominated convergence, 25-26, 54
 - Fatou's lemma, 25, 54
 - monotone convergence, 25, 54-55
- convergence of random functions
 - pointwise, 41
 - pseudo-uniform, 41-42
 - uniform, 41-42
 - weak convergence, *see* convergence of distributions
- convergence of random variables
 - almost surely, 19, 24
 - Borel-Cantelli lemma, 21
