

## Index

- advection-dispersion equation, 230, 241, 291, 294, 319, 325, 389  
 aggregation and scaling, 5, 54, 70, 74  
 anisotropy ratio, 237  
 antipersistence, 416
- balance equation, 3, 14, 23, 91, 93, 354, 383  
 Brooks-Corey hydraulic properties, 146, 149, 157, 176, 180, 185, 187  
   relation to scale invariance, 176, 180, 187  
 Brownian motion (BM), 111, 122, 362, 365, 387
- concentration microscales, 304  
 concentration time, 116  
 concentration variance, 243, 298, 302, 306, 323  
   periodic porous medium, 301, 306  
   relation to dilution index, 300, 327  
   relation to entropy, 323, 412  
   time dependence, 325, 328  
 conditional effective-parameter theory, 247  
 conditional simulation, 410, 418  
 contributing area, 69, 76  
   characteristic size, 72, 76  
 correlation, 420  
 covariance function, 234, 253, 267, 271, 364, 370, 374, 377, 397, 402  
   displacement, 275, 389  
   exponential model, 267, 294, 364  
   velocity, 270, 272, 388, 391  
 cumulative drainage, 154  
 cumulative infiltration, 144, 194, 196, 202, 206, 208, 210
- Darcy's law, 114, 235, 270, 338, 358, 383
- dilution, 291, 295, 306, 310  
   index, 297, 324  
   vs. advection, 295, 324  
 dilution index, 297, 300, 324, 327  
   and concentration fluctuations, 300  
   and entropy, 324, 328  
 dispersion coefficient, 230, 276, 279, 281, 283, 293, 297, 319, 322, 330, 384, 389, 390  
 dispersivity, 229, 242, 293, 296, 301, 318, 356, 363, 384, 390, 392  
 distributed model, 3, 97  
 distribution function, 70, 73, 77, 80, 84, 98, 112, 125, 234  
 drainage density, 32, 47, 57
- effective hydraulic conductivity, 235, 313, 343, 359, 364, 381  
 effective parameters, 17, 54, 235, 245, 247, 359, 386, 391  
   conditional, 247, 343, 358, 386, 404  
   unconditional, 235, 358  
 electric resistivity tomography, 258  
 elongation exponent, 68, 74  
 equation of continuity, 91, 93  
 equivalent pore size, 169  
 ergodicity, 268, 270, 275, 279, 286, 359  
 evaporation scaling ratio, 11
- Fick's law, 228, 330, 358  
 flood-frequency analysis, 98  
 fluctuation dissipation function, 302, 303  
 flux-concentration relation, 202  
 flux matching, 17, 313 (*see also* upscaling)  
 fractal dimension, 66, 109, 111, 127, 157, 176, 180, 362  
 fractal pore-size distribution, 158, 176  
 fractures, 335, 339  
   continuum approach, 336  
   discrete approach, 337

- Fujita model, 183  
 functional normalization, 147, 191
- Gardner soil, 185, 206, 213, 218, 227, 270, 287  
 gaussian conditioning, 404  
 general circulation model, 2, 13  
 geometry number, 48  
 geomorphic width function, 74, 96, 105  
 geomorphological instantaneous unit hydrograph, 106  
 geostatistical inverse approach, 250, 258  
 Green-Ampt infiltration, 194, 196, 202, 208, 213, 216–9
- Hack's law, 63, 67, 77, 79, 81  
 exponent, 77, 81, 83  
 head variance, 238  
 heat flux, 3  
 latent, 18  
 sensible, 18  
 hillslope erosion, 35, 38, 51  
 steady-state, 37  
 homogenous function, 102, 121  
 Horton laws, 108  
 bifurcation ratio, 109  
 Horton-Strahler stream ordering, 76, 106, 108  
 Hortonian runoff, 113  
 Hurst exponent, 68, 74, 78, 362, 365, 369, 375, 380, 382, 385, 388, 390, 393, 403, 407, 413  
 hydraulic conductivity measurement, 343, 348, 354  
 correlation scales, 361, 379  
 variograms, 360, 362, 379, 400  
 hydraulic-geometric variables, 96, 107  
 HYDRO\_GEN, 402  
 hydrograph, 91, 117  
 unit, 106, 118  
 hydrologic regionalization, 90
- independent identically-distributed (IID), 117  
 index-flood method, 100  
 information entropy, 412  
 inspectional analysis, 141, 191, 207
- kriging, 248, 250, 410
- landscape morphology, 46, 49, 56  
 Lagrangian framework, 275  
 large-eddy-simulation (LES) method, 314, 320, 330  
 lumped model, 3, 17
- mainstream length, 75, 78  
 mesoscale convective complexes, 123  
 Miller-Miller similitude, 137, 169, 174, 190  
 Monte Carlo simulation, 255, 258, 415  
 multifractal, 125  
 multiscale heterogeneity, 244, 342, 392, 398, 409  
 multiscaling, 20, 96, 121, 127, 346, 351, 354, 364, 366, 371, 381
- Parlange infiltration, 205, 211  
 periodic porous medium, 313  
 Philip infiltration, 197, 199, 203  
 plume statistical moments, 275, 279, 294, 298, 330, 389
- quantile-regression approach, 98
- random hydraulic conductivity, 233, 383  
 random space function (RSF), 267, 359, 402, 405  
 reactor ratio, 297, 308  
 regional homogeneity, 104  
 relative saturation, 172, 174, 176, 180  
 renormalization group, 331  
 representative elementary area, 6  
 representative elementary volume, 226, 229, 231, 293, 341, 354  
 field-scale (FSREV), 232, 241, 244, 259  
 return period, 98  
 Richards equation, 142, 151, 171, 177, 182, 192, 227, 249  
 equivalent homogeneous mean, 237  
 fieldwide mean, 171, 237, 247  
 scaled, 152, 178, 183, 186  
 river incision, rate of, 43  
 runoff generation, 112  
 runoff ratio, 113  
 Russo-Jury exponent, 181, 186  
 Brutsaert form, 182
- S-hydrograph, 118  
 scale-invariant absorption, 142, 184  
 scale-invariant hydraulic conductivity, 138, 143, 153, 155, 162, 170, 181, 198, 204, 345, 350, 357  
 scale-invariant soil-water pressure, 138, 153, 155, 158, 170, 175, 179, 184, 198, 204  
 scale-invariant soil-water profile, 151, 213  
 scale-invariant soil-water properties, 137, 160, 172, 176, 198, 204  
 scale-invariant landscape, 30, 43, 50, 66  
 river basin, 62, 83, 95  
 scale-invariant pore-size distribution, 173, 175  
 fractal model, 176, 180

- scaling exponent, 103, 119, 129, 175, 179  
 second-order stationarity, 234, 267, 275, 402  
 self-affine, 63, 362, 365, 388  
 self-similarity, 20, 63, 70, 83, 106, 137, 175, 180, 399, 401, 403, 407, 415  
 semivariogram, 359, 365, 377, 383, 388, 392, 399, 403, 410, 416  
   correlation and, 419  
   exponential, 366, 372, 379, 392, 401  
   filtered, 367, 369, 379, 392  
   gaussian, 369, 373, 379, 392  
   multiscale, 399, 416  
   power-law, 380, 387, 388, 392, 401, 403, 407, 415  
   relation to self-similarity, 401, 407  
 similarity theory, 19, 137, 192  
 similitude analysis, 167, 191  
   Miller-Miller, 169, 171, 190  
   Warrick-Nielsen, 170, 173, 181, 193  
 simple scaling, 95, 102, 105, 124  
   exponent, 103, 129  
 sinuosity exponent, 78  
 slope-area relationship, 44, 49, 53, 57  
 soil water diffusivity, 143, 171, 178, 183, 195, 201  
 sorptivity, 144, 195, 198, 200  
 spatial homogeneity, 102  
 spatially-filled transport equation, 318  
 spatially scaling process, 20  
 specific capacity, 192, 227  
 spectral density, 365, 371, 373, 374, 397  
 still, 359, 400  
 stream power, 41  
 subgrid closure, 329  
 support scale, xiii, 357, 387, 391  
  
 Talsma infiltration, 208, 211, 213, 215–9  
 topographic compensation, 45  
 topology, drainage network, 92  
   self-similar, 106, 109, 117  
 transport laws, sediment, 52  
  
 unconditional effective-parameter theory, 235  
 upscaling, 18, 24, 50, 357  
  
 van Genuchten soil, 228  
 variance residence time (VRT), 303, 306, 310  
  
 Warrick-Nielsen similitude, 138, 170, 173, 181, 193
