Preface *page* vii

1 Introduction and background **1**
Basic terminology and related concepts 3
Senescence and aging 3
Longevity and life span 6
Evolutionary biology 9
History of research on senescence and longevity 12
Demographic perspectives on human longevity and life span 24
Chapter synopsis 33

2 Evolutionary and biological theories of senescence **34**
Background 34
Evolutionary (ultimate) theories: the basis of senescence 37
Biological (proximate) theories: mechanisms/models of senescence 47
Chapter synopsis 69

3 Human variation: growth, development, life history, and senescence **71**
Homeostasis 74
Growth and development 83
Life history 95
Chapter synopsis 127

4 Human variation: chronic diseases, risk factors, and senescence **131**
Chronic degenerative conditions 132
Risk factors 136
Systems/integration 166
Variation in human life span 184
Chapter synopsis 196

5 Human life span and life extension **197**
Life span 197
Non-human animal models 201
Applications to humans 208
Limits to human longevity? 218
Chapter synopsis 221

Table of Contents
More information

6 Discussion and perspectives **226**
Human senescence 226
Sex differences in life span 234
Human senescence, health, and disease 236
Aging and senescence 237
Old age: uniquely human? 240
Theory in gerontology 243
Current research directions 246
Conclusion 247
