Science, technology and the British industrial ‘decline’, 1870–1970
New Studies in Economic and Social History

Edited for the Economic History Society by
Michael Sanderson
University of East Anglia, Norwich

This series, specially commissioned by the Economic History Society of Great Britain, provides a guide to the current interpretations of the key themes of economic and social history in which advances have recently been made or in which there has been significant debate.

In recent times economic and social history has been one of the most flourishing areas of historical study. This has mirrored the increasing relevance of the economic and social sciences both in a student’s choice of career and in forming a society at large more aware of the importance of these issues in their everyday lives. Moreover specialist interests in business, agricultural and welfare history, for example, have themselves burgeoned and there has been an increased interest in the economic development of the wider world. Stimulating as these scholarly developments have been for the specialist, the rapid advance of the subject and the quantity of new publications make it difficult for the reader to gain an overview of particular topics, let alone the whole field.

New Studies in Economic and Social History is intended for students and their teachers. It is designed to introduce them to fresh topics and to enable them to keep abreast of recent writing and debates. All the books in the series are written by a recognised authority in the subject, and the arguments and issues are set out in a critical but unpartisan fashion. The aim of the series is to survey the current state of scholarship, rather than to provide a set of prepackaged conclusions.

The series has been edited since its inception in 1968 by Professors M. W. Flinn, T. C. Smout and L. A. Clarkson, and is currently edited by Dr Michael Sanderson. From 1968 it was published by Macmillan as Studies in Economic History, and after 1974 as Studies in Economic and Social History. From 1995 New Studies in Economic and Social History is being published on behalf of the Economic History Society by Cambridge University Press. This new series includes some of the titles previously published by Macmillan as well as new titles, and reflects the ongoing development throughout the world of this rich seam of history.

For a full list of titles in print, please see the end of the book.
Science, technology and the British industrial ‘decline’, 1870–1970

# Tables

2.1 Estimates of annual graduation in science, mathematics and technology. England *page* 20
2.2 University students by faculty, 1929–68. Great Britain 22
2.3 Career destinations of Oxford male science graduates, 1900–70 24
2.4 Higher education of active partners or executive directors of steel firms, 1875–1947 27
3.1 Queen’s Awards for Innovation in 1966 and 1967 by industrial sector 31
3.2 Estimates of industry-funded research and development spending. UK 33
4.1 Treasury estimates of government-funded ‘scientific research’, 1925 38
4.2 Government and industrial expenditure on R&D, 1964/5 39
4.3 Government contributions to civil aircraft and engine development, 1945–74 45
5.1 Gross domestic product per head 1870–1973 49
5.2 Comparative manufacturing labour productivity, capital per worker and total factor productivity in Britain, Germany and the USA, 1875–1975 49
5.3 Higher education of a sample of English and German businessmen 54
5.4 Numbers graduating from universities and equivalent institutions in science and technology, 1954/55 54
5.5 Proportion of age group (20–24) graduating from post-secondary education in science and technology, 1964 55
5.6 Output, stock and distribution of qualified scientists 55
5.7 University education of administrative elites 1970/71 56
5.8 R&D intensity, UK, USA and Japan, 1930s 59
5.9 USA/UK comparison of R&D in manufacturing industry, 1959 60
5.10 Estimated distribution of industrial R&D expenditure 1962 61
5.11 Sectoral distribution of privately funded industrial R&D, 1969 or 1970 61
5.12 Relative levels of absolute industry-funded industrial R&D 1963 and 1973 62
5.13 R&D financed by manufacturing industry as percentage of domestic product of manufacturing industry 62
5.14 Ratio of UK/Germany patents in the USA, 1886–1965 64
5.15 Major inventions, discoveries and innovations by country 65
Acknowledgements

I am most grateful to the editor of the series for inviting me to write this book. Simon Bellenie helped me to compile an extensive bibliography. Leslie Hannah, Kirsty Hughes, Sally Horrocks, Terence Kealey, John Pickstone and Jonathan Zeitlin have all shaped my thinking on the topics discussed here. Sally Horrocks, Lara Marks, Chris Mitchell, Michael Sanderson, Andrew Warwick and Alan Yoshioka read an early draft and made invaluable criticisms. Alan Yoshioka made penetrating criticisms of a further draft, for which I am very grateful. I am also grateful for additional comments to Paolo Palladino and an anonymous referee. I have also benefitted from the excellent resources of the Science Museum Library.

Note on references

References within square brackets relate to the numbered items in the bibliography. Where given, page numbers are printed in italics, for example [76:231]. For ease of reference the bibliography is grouped into related works; within groups the arrangement is roughly chronological.
