<i>Preface</i>	ix
1 Glass properties	1
Introduction	1
1.1 Features of glass as an industrial material	1
1.1.1 Structural features	1
1.1.2 Thermodynamic features	5
1.1.3 Optical features	9
1.2 Classification of glasses by preparation method	15
1.2.1 Glass by melt-quenching technique	15
1.2.2 Glass by chemical vapor deposition	18
1.2.3 Glass by sol-gel process	22
1.3 Important glass systems	27
1.3.1 Oxide glasses	27
1.3.2 Halide and oxy-halide glasses	32
1.3.3 Chalcogenide glasses	37
1.4 Secondary treatment of a glass for the development of a special function	38
1.4.1 Thermal treatment	38
1.4.2 Ion exchange	50
References	52
2 Gradient index glass	58
Introduction	58
2.1 Applications	59
2.2 Design of radial gradient index profiles	61
2.3 Parameters for fabrication of index gradient	62
2.3.1 Gradient index profile	62
2.3.2 Maximum index difference	64

vi	<i>Contents</i>	
2.3.3	Chromatic property	64
2.3.4	Stress	66
2.4	Materials and fabrication techniques	67
2.4.1	Ion exchange	67
2.4.2	Molecular stuffing technique	70
2.4.3	Sol-gel technique	71
2.4.4	Comparison between various fabrication techniques	78
2.5	Spherical gradient index lens	78
	References	79
3	Laser glass	82
	Introduction	82
3.1	Fundamentals of laser physics	82
3.1.1	Stimulated emission	82
3.1.2	Cross section	85
3.1.3	Creation of a population inversion	85
3.1.4	Laser oscillation by resonant cavity	88
3.1.5	Active ions for laser glasses	89
3.1.6	Laser parameters and their host dependence	91
3.1.7	Nonradiative relaxation	93
3.2	Bulk laser glasses	96
3.2.1	Compositional dependence of laser parameters of Nd ³⁺ -doped glasses	96
3.2.2	Nonradiative relaxation of rare-earth ions in glasses	101
3.2.3	Properties of practical laser glasses	103
3.3	Fiber lasers and amplifiers	106
3.3.1	General description of fiber laser	106
3.3.2	Fiber amplifiers	109
3.3.3	Fiber laser oscillators	123
3.3.4	Recent progress	132
3.4	Waveguide lasers and amplifiers	133
3.4.1	Fabrication of channel waveguide structure	133
3.4.2	Lasing characteristics	134
3.4.3	Amplification characteristics	140
3.4.4	Devices based on the glass waveguide lasers	142
	References	145
4	Nonlinear optical glass	159
	Introduction	159
4.1	Fundamentals of nonlinear optics and applications	160
4.1.1	General description of nonlinear polarization	160
4.1.2	Optical nonlinearity of the medium	161
4.1.3	Measurement of nonlinear optical properties	163

<i>Contents</i>	vii
4.1.4 Applications of optical nonlinear materials	166
4.2 Nonresonant nonlinear glasses	168
4.2.1 Nonlinearity of dielectric materials	169
4.2.2 BGO model for nonresonant optical nonlinearities	171
4.2.3 Lines' model for nonresonant optical nonlinearities	171
4.2.4 Nuclear contributions	172
4.2.5 Nonlinear optical properties of nonresonant nonlinear glasses	173
4.3 Semiconductor-doped glasses	182
4.3.1 Fundamentals of semiconductors	182
4.3.2 Linear optical properties of semiconductor-doped glasses	187
4.3.3 Nonlinear optical susceptibilities of the strong confinement case	189
4.3.4 Nonlinear response time in the strong confinement case	194
4.3.5 Photodarkening effect	198
4.3.6 Nonlinear optical properties in the weak confinement case	203
4.3.7 Fabrication techniques	209
4.3.8 Applications of semiconductor-doped glasses	211
4.4 Metal-doped glasses	212
4.4.1 Fundamentals of optical properties of metal	212
4.4.2 Optical nonlinear mechanisms of metal-doped composite materials	216
4.4.3 Nonlinear optical properties of metal-doped glasses	218
4.4.4 Fabrication techniques	228
4.5 Comparisons of optical nonlinearities of various nonlinear glass materials	228
References	232
5 Magneto-optical glass	242
Introduction	242
5.1 Magnetic properties of materials	243
5.1.1 Origin of magnetism of materials	243
5.1.2 Macroscopic description of the magnetic properties of materials	244
5.2 Fundamentals of the Faraday effect	246
5.2.1 Origin of Faraday rotation	246
5.2.2 Verdet constant	248
5.3 Faraday effect in glasses	249
5.3.1 Diamagnetic glasses	249
5.3.2 Paramagnetic glasses	250
5.3.3 Applications	261
References	263
