ECONOMIC DEVELOPMENT AND COOPERATION IN THE PACIFIC BASIN

Trade, Investment, and Environmental Issues

This volume brings together contributions from leading economic analysts around the Pacific Basin, reporting on their research into three of the most important issues facing the region: trade, investment flows, and the environmental effects of economic growth. Each of these issues has important domestic and multilateral ramifications, and the Pacific Basin's status as the world's most dynamic economic region makes this analysis relevant to policymakers and researchers in all countries. The collection offers up-to-date appraisals available from economists representing the principal economies of the region. Among other contributions in the book are new insights into the forces animating regional trade and investment; detailed assessment of leading East Asian economies, such as those of China, Indonesia, Japan, Korea, and Singapore; and innovative research on economy–environment linkages.

Hiro Lee is Associate Professor in the Graduate School of International Development at Nagoya University. He was previously Assistant Professor of Economics at the University of California–Irvine and worked on a global environment project at the OECD. Professor Lee has worked extensively in quantitative analysis of international trade and development, particularly on Pacific Basin economies, and is currently working on policy assessments of APEC trade and investment liberalization and structural adjustment. In 1992 he was awarded an Abe Fellowship to undertake a research project on Cooperative Trade Strategies for the United States and Japan. His studies have been published in a variety of journals, including the *Journal of Development Economics*, the *World Economy*, and the *Journal of Asian Economics*.

David W. Roland-Holst is Associate Professor of Economics at Mills College and Research Associate at the Centre for Economic Policy Research (London). An authority on policy modeling, with extensive research experience in international trade and development, he has held academic positions in the United States, Switzerland, and the Netherlands and worked for a variety of U.S. domestic and international agencies, including the U.S. International Trade Commission, OECD, and the World Bank. In addition to seminal research on methodology, Professor Roland-Holst has done applied research on and in more than twenty developing countries. In addition to providing expert consultation to domestic and international agencies, he has published extensively in the academic literature, including such professional journals as the *Review of Economics and Statistics*, the *Canadian Journal of Economics*, the *Journal of Development Economics*, and the *Review of Income and Wealth*.

Acknowledgments

On June 30–July 1, 1995, we held an international conference on "Economic Development and Cooperation in the Pacific Basin" at the University of California, Berkeley. Earlier versions of most of the chapters contained in this volume were first presented at this conference and have been substantially revised since then. We thank the conference participants, three anonymous referees for the volume, and Scott Parris for their helpful comments on earlier drafts. Thanks also to Rosalie Herion Freese of Cambridge University Press for the final copy edit.

We gratefully acknowledge the Japan Foundation's Center for Global Partnership (CGP) for its financial support on our project, making possible the conference and the editors' collaboration. The conference not only disseminated research findings by experts on and from the region but also created an international network of interested researchers and policymakers who will contribute to a more cooperative policy agenda across the Asian Pacific region in this decade and the coming century.
