

Contents

	<i>List of contributors</i>	page xi
	<i>Preface</i>	xiii
	Part one: Introduction to structure formation	1
1	Dark matter and structure formation	3
	<i>J. R. Primack</i>	
	1.1 Introduction	3
	1.2 Cosmology basics	7
	1.3 Age, expansion rate, and cosmological constant	12
	1.4 Measuring Ω_0	23
	1.5 Dark-matter particles	33
	1.6 Origin of fluctuations: inflation and topological defects	42
	1.7 Comparing DM models to observations: Λ CDM vs. CHDM	54
	<i>References</i>	76
2	Gravitational instability	86
	<i>A. Yahil</i>	
	2.1 Introduction	86
	2.2 Linear theory and Zel'dovich approximation	88
	2.3 Nonlinear methods and mixed boundary conditions	90
	<i>References</i>	97
3	Microwave background and structure formation	98
	<i>J. Silk</i>	
	3.1 Introduction	98
	3.2 Gravitational instabilities: linear theory	99
	3.3 Nonlinear evolution	105
	3.4 Galaxy formation by reverse engineering	111
	3.5 Cosmic microwave background anisotropies	118
	3.6 Confrontation of theory and large-scale structure	123

viii *Contents*

3.7	Future prospects	126
	<i>References</i>	131
	Part two: Large-scale structure and flows	133
4	Clusters and superclusters of galaxies	135
	<i>N. A. Bahcall</i>	
4.1	Introduction	135
4.2	Optical properties of galaxy clusters	136
4.3	X-ray properties of galaxy clusters	143
4.4	The baryon fraction in clusters	151
4.5	Cluster masses	152
4.6	Where is the dark matter?	155
4.7	The mass function of clusters	155
4.8	Quasar–cluster association	156
4.9	Superclusters	158
4.10	The cluster correlation function	160
4.11	Peculiar motions of clusters	164
4.12	Some unsolved problems	167
	<i>References</i>	169
5	Redshift surveys of the local universe	172
	<i>M. A. Strauss</i>	
5.1	Introduction	172
5.2	Varieties of redshift surveys	173
5.3	The luminosity and selection function	178
5.4	Clustering statistics	181
5.5	Measurements of the power spectrum	184
5.6	The relative distribution of galaxies and dark matter	195
5.7	Surveys for the future	198
5.8	Conclusions	206
	<i>References</i>	208
6	Measurement of galaxy distances	213
	<i>J. A. Willick</i>	
6.1	Introduction	213
6.2	Cepheid variables	216
6.3	The Tully–Fisher relation for spiral galaxies	219
6.4	Fundamental Plane relations for elliptical galaxies	225
6.5	Surface brightness fluctuations	229
6.6	Supernovae	233
6.7	Brightest cluster galaxies	237

<i>Contents</i>	ix
6.8 Redshift-distance catalogs	239
6.9 Malmquist and other biases	241
6.10 Summary	245
<i>References</i>	247
7 Large-scale flows and cosmological implications	250
<i>A. Dekel</i>	
7.1 Introduction	250
7.2 Reconstruction from peculiar velocities	253
7.3 Testing basic hypotheses	273
7.4 Statistics of mass-density fluctuations	280
7.5 Direct measurements of Ω from peculiar velocities	289
7.6 Measurements of β from galaxy density and velocities	293
7.7 Cosmological parameters	306
7.8 Conclusion	312
<i>References</i>	315
Part three: Structure on galactic scales and lensing	319
8 Cosmological simulations	321
<i>J. P. Ostriker</i>	
8.1 Introduction	321
8.2 Simulation methods	323
8.3 Results: comparison with observations	330
8.4 Conclusions	332
<i>References</i>	335
9 Black holes in galaxy centers	337
<i>S. M. Faber</i>	
9.1 Introduction	337
9.2 Surface-brightness and stellar distributions	339
9.3 Kinematic evidence for central massive black holes	345
<i>References</i>	358
10 Gravitational lensing	360
<i>R. Narayan & M. Bartelmann</i>	
10.1 Introduction	360
10.2 Lensing by point masses in the universe	364
10.3 Lensing by galaxies	384
10.4 Lensing by galaxy clusters and large-scale structure	406
<i>References</i>	426

x *Contents*

	Part four: A conclusion	433
11	The mass of the universe	435
	<i>P. J. E. Peebles</i>	
	11.1 Introduction	435
	11.2 Dynamical mass measurements	443
	11.3 The cosmological tests	455
	11.4 Scorecard and issues	460
	11.5 Concluding remarks	463
	<i>References</i>	464
	<i>Index</i>	466
