<b>Part 1</b>	<b>Origins</b>	<b>1</b>
<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Objectives	3
1.2	Scope	6
1.3	Audience	6
1.4	Reference	7
<b>2</b>	<b>Emergence</b>	<b>8</b>
2.1	Time	8
2.2	Catastrophes and increments	12
2.3	Heat	15
2.4	Cooling age of earth	16
2.5	Flowing rocks	19
2.6	References	20
<b>3</b>	<b>Mobility</b>	<b>22</b>
3.1	Drifting continents	23
3.2	Creeping mantle	27
3.3	A mobile surface – re-emergence of the concept	33
3.4	Wilson's plates	38
3.5	Strong evidence for plates in motion	43
	3.5.1 <i>Magnetism</i>	43
	3.5.2 <i>Seismology</i>	47
	3.5.3 <i>Sediments</i>	49
3.6	Completing the picture – poles and trenches	49
	3.6.1 <i>Euler rotations</i>	50
	3.6.2 <i>Subduction zones</i>	53
3.7	Plumes	55
3.8	Mantle convection	58
3.9	Afterthoughts	63
3.10	References	65

<b>Part 2 Foundations</b>	<b>71</b>
<b>4 Surface</b>	<b>73</b>
4.1 Plates	73
4.2 Topography	77
4.2.1 Continents	77
4.2.2 Sea floor	78
4.2.3 Seafloor depth versus age	80
4.3 Heat flow	80
4.3.1 Sea floor	80
4.3.2 Continents	83
4.4 Gravity	85
4.5 References	87
<b>5 Interior</b>	<b>89</b>
5.1 Primary structure	90
5.1.1 Main layers	90
5.1.2 Internal structure of the mantle	92
5.1.3 Layer names	93
5.1.4 Pressure, gravity, bulk sound speed	95
5.2 Layer compositions and nature of the transition zone	97
5.2.1 Peridotite zone	97
5.2.2 Transition zone and perovskite zone	98
5.3 Phase transformations and dynamical implications	105
5.3.1 Pressure-induced phase transformations	105
5.3.2 Dynamical implications of phase transformations	106
5.3.3 Thermal deflections of phase boundaries	107
5.3.4 Compositional deflections and effects on density	109
5.4 Three-dimensional seismic structure	112
5.4.1 Seismic detection of subducted lithosphere	112
5.4.2 Global deep structure	115
5.4.3 Spatial variations in the lithosphere	116
5.5 References	118
<b>6 Flow</b>	<b>122</b>
6.1 Simple viscous flow	124
6.2 Stress [Intermediate]	128
<i>Box 6.B1 Subscript notation and summation convention</i>	131
6.2.1 Hydrostatic pressure and deviatoric stress	133
6.3 Strain [Intermediate]	134
6.4 Strain rate [Intermediate]	137
6.5 Viscosity [Intermediate]	138
6.6 Equations governing viscous fluid flow [Intermediate]	140
6.6.1 Conservation of mass	140
6.6.2 Force balance	141
6.6.3 Stream function (incompressible, two-dimensional flow)	142

6.6.4	<i>Stream function and force balance in cylindrical coordinates [Advanced]</i>	144
6.7	Some simple viscous flow solutions	147
6.7.1	<i>Flow between plates</i>	147
6.7.2	<i>Flow down a pipe</i>	148
6.8	Rise of a buoyant sphere	149
6.8.1	<i>Simple dimensional estimate</i>	150
6.8.2	<i>Flow solution [Advanced]</i>	152
	<i>Box 6.B2 Stresses on a no-slip boundary</i>	156
6.9	Viscosity of the mantle	156
6.9.1	<i>Simple rebound estimates</i>	157
6.9.2	<i>Recent rebound estimates</i>	161
6.9.3	<i>Subduction zone geoids</i>	163
6.9.4	<i>Rotation</i>	166
6.10	Rheology of rocks	166
6.10.1	<i>Brittle regime</i>	167
6.10.2	<i>Ductile or plastic rheology</i>	171
6.10.3	<i>Brittle–ductile transition</i>	173
6.11	References	175
6.12	Exercises	176
<b>7</b>	<b>Heat</b>	<b>178</b>
7.1	Heat conduction and thermal diffusion	178
7.2	Thermal diffusion time scales	180
7.2.1	<i>Crude estimate of cooling time</i>	181
7.2.2	<i>Spatially periodic temperature [Intermediate]</i>	182
7.2.3	<i>Why is cooling time proportional to the square of the length scale?</i>	183
7.3	Heat loss through the sea floor	184
7.3.1	<i>Rough estimate of heat flux</i>	185
7.3.2	<i>The cooling halfspace model [Intermediate]</i>	186
7.3.3	<i>The error function solution [Advanced]</i>	188
7.4	Seafloor subsidence and midocean rises	189
7.5	Radioactive heating	192
7.6	Continents	193
7.7	Heat transport by fluid flow (Advection)	198
7.8	Advection and diffusion of heat	199
7.8.1	<i>General equation for advection and diffusion of heat</i>	199
7.8.2	<i>An advective–diffusive thermal boundary layer</i>	200
7.9	Thermal properties of materials and adiabatic gradients	202
7.9.1	<i>Thermal properties and depth dependence</i>	202
7.9.2	<i>Thermodynamic Grüneisen parameter</i>	203
7.9.3	<i>Adiabatic temperature gradient</i>	204
7.9.4	<i>The super-adiabatic approximation in convection</i>	205

7.10	References	206
7.11	Exercises	207
<b>Part 3</b>	<b>Essence</b>	<b>209</b>
<b>8</b>	<b>Convection</b>	<b>211</b>
8.1	Buoyancy	212
8.2	A simple quantitative convection model	214
8.3	Scaling and the Rayleigh number	217
8.4	Marginal stability	220
8.5	Flow patterns	224
8.6	Heating modes and thermal boundary layers	225
	8.6.1 <i>Other Rayleigh numbers [Advanced]</i>	228
8.7	Dimensionless equations [Advanced]	230
8.8	Topography generated by convection	233
8.9	References	237
8.10	Exercises	237
