

Index

- adiabatic invariant, 36
 - first invariant, 39
 - second invariant, 44
 - third invariant, 50
- artificial radiation belts, 116, 144
- bounce period, 43, 162, 163
- curvature drift (*see* drift velocity)
- detectors (particle), 68–74
- diffusion coefficient, 94
 - pitch angle diffusion coefficient, 114, 123, 125
 - radial diffusion coefficient, 141, 143
- diffusion equation, derivation, 94
 - solution by separation of variables, 95
- diffusion of particles (*see* pitch angle diffusion, radial diffusion)
- drift velocity, perpendicular to \mathbf{B} ,
 - curvature B drift, 17, 19–20
 - electric field drift, 12–14
 - gradient B drift, 17–19
- drift period, 47–50
- electron flux (*see* radiation belts)
- flux, particle,
 - definitions, 59–62
 - relationship to phase space density, 66–7
- Fokker–Planck equation, 98–100
- frozen field approximation, 136
- geomagnetic field, 25–9
 - dipole magnetic field, 29–31
 - multipole expansion, 28, 33
- geomagnetic tail, 3
- guiding center approximation, 14, 17
- gradient drift velocity (*see* drift velocity)
- growth rate of wave, 128–9
- gyrofrequency, 11
- gyroradius, 11
- Jacobian, coordinate transformation, 101–4
- L-coordinate, McIlwain coordinate, 53
- Liouville’s theorem, 64
- Lorentz force equation, 10
- Lorentz coordinate transformation, 13, 159
- Loss-cone angle,
 - bounce loss cone angle, 43
 - drift loss cone angle, 47
- magnetic anomaly, South American, 33, 78
- magnetosphere, description of, 2
- magnetic storms, 153
- Maxwell’s equations, 27, 159
- mirroring force, 21–2
- neutrons, cosmic ray albedo source, 105
- phase space density, 64
 - relationship to particle flux, 66–7
- phase velocity of wave, 119
- pitch angle, 12
- pitch angle diffusion, 111–30
 - by collisions with the atmosphere, 111–18
 - by interactions with waves, 118–30
- planets, characteristics, 151
- proton flux (*see* radiation belts)
- radial diffusion, 132–47
 - by magnetic fluctuations, 134–41
 - by electric field fluctuations, 141–4
- radiation belts, particle fluxes,
 - electrons, 79–83
 - ions other than protons, 81
 - protons, 75–8
 - time variations, 83–6
- ring current, 26
- shell splitting (of L-shells), 47
- slot region, 80
- solar wind, 2
- South American anomaly (*see* magnetic anomaly)
- wave–particle interactions, 118
- whistler waves, 119
