<i>Preface</i>	xi
<i>List of symbols</i>	xiii
<i>Useful constants</i>	xvii
<i>Geophysical quantities</i>	xviii
<i>Energy equivalents</i>	xix
1 The Earth's radiation belts	1
Introduction	1
The magnetosphere	2
The radiation belts	4
The importance of trapped radiation in space science and technology	4
Implications for astrophysics	6
Status of radiation belt knowledge	7
2 Charged particle motion in magnetic and electric fields	10
Introduction	10
Uniform magnetic field	11
Uniform magnetic and electric fields	12
Inhomogeneous magnetic field	14

viii	<i>Contents</i>	
3	The geomagnetic field	25
	Representation of the Earth's interior field	27
	The dipole field	29
	Representation of the external current systems	33
4	Adiabatic invariants	36
	Introduction	36
	First adiabatic invariant	39
	Second adiabatic invariant	44
	Third adiabatic invariant	50
	Geomagnetic coordinate system based on adiabatic invariants—the <i>L</i> -shell parameter	53
5	Particle fluxes, distribution functions and radiation belt measurements	59
	The specification of particle distributions	59
	Liouville's theorem and phase space densities	64
	Trapped radiation measurement techniques	68
	Particle detectors	71
	Trapped particle populations	74
	Introduction	74
	Radiation belt protons	75
	Electrons	79
	Ions other than protons	81
	Time variations	83
6	Particle diffusion and transport	92
	Introduction	92
	Diffusion equation	94
	Particle diffusion in the radiation belts	97
	Injection of protons by cosmic ray albedo neutrons	106
7	Diffusion in pitch angle	111
	Electron diffusion by collisions with atmospheric atoms	111
	Diffusion in pitch angle by interactions with waves	118
	Coupling of particle and wave energy	128
	Discussion	130
8	Diffusion in the <i>L</i> coordinate or radial diffusion	132
	Radial diffusion induced by magnetic fluctuations	134

<i>Contents</i>	ix
Radial diffusion induced by electric potential fields	141
Observed and derived values of D_{LL}	144
Dilution of phase space density	146
9 Summary and comments	149
Appendix A Summary of frequently used formulas	157
Appendix B Gyration, bounce and drift frequencies in a dipole field	161
<i>References</i>	167
<i>Index</i>	168
