### Subject Index

Adele described, 183  
Agent thought structure, adoption of,  
124–125  
Alberti, L.B., 307  
Animated pedagogical agents (APAs). See also Informal instruction,  
animations in  
botany multimedia game scenario,  
184–185  
cognitive processing enhancement by,  
197, 201  
design, principles of, 202–203  
experiments  
agent vs. non-agent environment,  
192–194, 201  
interactivity & guidance hypotheses,  
199–200, 201–202, 359  
visual vs. auditory agent cues,  
194–197  
learning enhancement by, 188–190, 198  
learning impedance by, 191–192, 201  
overview, 183, 359–360  
roles of, 183–184, 186–188  
Animations  
appeal of, 263  
applications of, 264, 271, 288, 300–301  
benefits of, 5, 92, 125–126, 143, 235–236, 286  
as compensation for lack of spatial ability, 7  
comprehension of (See Comprehension; Learning)  
as content representations, 360–361  
defined, 141, 264–265, 304  
directive function of, 315–316  
feature usage, verification of, 18–19 (See also Interrogation strategies)  
history of, 286–287, 307–308  
instructional uses of, 142–148  
and judgment of mechanical events, 8, 266  
limitations of, 33, 263–264  
narrative structure in, 278  
online processing of, 146–148  
production cost, justification of, 26  
realism in, 308  
representational function of, 315–316  
senses of, 359  
spatial/temporal structures in, 317–318  
student-authored (See Expository representations, student-authored)  
types  
effectiveness of, 100–105, 111–112  
overview, 309  
versatility of, 114  
vs. static diagrams, 304–305  
Anthropomorphism, 191  
Arrows, 11, 18, 265, 270, 271–275, 281, 312  
Assembly instructions study, 276–279, 281
Attention
Animated Pedagogical Agents
conditions and, 190
in cognitive load theory, 175
directing
for learning enhancement, 215–216,
308, 316, 350, 361–362, 365
visual, 333–334
issues in processing, 331–333, 363–364
measurement of, 19
overwhelming and, 331–333
pictorial/verbal guidance of, 343–344
problems, resolving through design,
11–12
split, effects, 209
visual
comprehension and, 11, 142–143
AutoTutor described, 183
Baldi, 189–190
Behavioral realism, 335–337, 341–342
Behaviors, decomposition of, 327
Being-Taught condition, 128–130
Betty's Brain. See Teachable Agents (TAs)
Bicycle tire pump experiment
cognitive processing requirements, 173
multimedia effect in, 30
Botany multimedia game scenario. See
also Animated pedagogical agents
(APAs)
described, 184–185, 187
experiments
agent vs. non-agent environment,
192–194
visual vs. auditory agent cues,
194–197
Bottom-up processing
in animation comprehension, 4, 50
temporal changes, 323
Breakpoints in events, patterns of
thought regarding, 267
Camouflage, 322
Canal, Giovanni (Canaletto), 307
CAROUSEL tool, 243, 244
Categorization, principles of, 323–328
CATLMs, 183, 186, 189, 194, 197, 198, 202
Causal relationships, portrayal of, 315
Cell metabolism study, 124–125
Children
animation applications for, 145–146
as research subjects, 142
social situations, learning, 295–296
Chunking, 325–327
Circumnavigation study
animation types, effectiveness of, 99,
100–103, 105
ANOVA analysis, 97–99, 103–104
cognitive processing requirements, 100
materials, 97, 102
results, 99
Cistern, flushing. See Flushing cistern
study
Cognitive capacity
allocation of, 38–39
processing demands for, 35–36, 71–72,
348
Cognitive design principles
in animation effectiveness, 30–32,
291–292
described, 3, 202–203, 280–282
integrated approach to, 350–351
of multimedia learning, 45, 88
Cognitive load theory
and animation design, 88
animations and cognitive processing,
100, 237, 290, 316–317, 365–366
attention in, 175
described, 72–73, 93–94
domain knowledge in, 197, 202, 230
enabling/facilitating functions in,
94–100
and zone of proximal development,
105–107
Cognitive processing
ability as challenge to learning,
146–148, 209, 363–364
cognitive load theory, 100, 237, 290,
316–317, 365–366 (See also
Cognitive load theory)
complexity issues in, 51–52
in comprehension
overview, 6–7, 328–329
static diagrams, 6–7, 71, 328–329
display panel interrogation patterns and user control, 214, 229–230
and domain knowledge, 343–344
dynamic visualizations study
instructional materials, differences in, 86–87
strategies employed, 87–88
times, differences in, 84, 87
encoding in, 175–176
enhancement by Animated Pedagogical Agents, 197, 201
eye-mind assumption, 330
immediacy assumption, 330–331
integration in, 35, 88, 186, 305
long-term memory in, 93–94
meaningful learning outcomes in, 35, 36
mental representation in depth aspect of, 169, 170, 174
overview, 169–170, 173, 290, 313, 339–340
no learning outcomes in, 35, 36
organization in, 35, 38–39, 266–267
pictoral/verbal guidance of, 343–344
requirements
bicycle tire pump experiment, 173
circumnavigation study, 100
time and date difference study, 100, 173
weather map animation study, 173, 214–215
rote learning outcomes in, 35, 36
spatial/temporal inferences in, 340–343
strategies, weather map animation study, 147, 237
support, as animation application, 145
working memory in, 35, 93–94, 106–107, 176, 316–317, 342–343
Cognitive theory of multimedia learning described, 33–36, 72–73
Coherence principle, 37–38
Comenius, J.A., 307
Communication in design, 12
tools for arrows, 11, 18, 265, 270, 271–275, 281, 312
dots, 312
language, 12, 196 (See also Text)
lines, 271–275, 281
points, 280
static diagrams, 268–270
visual, history of, 306–308
Complexity issues in processing, 51–52
Comprehension. See also Learning bottom-up model of, 4, 50
challenges to, 51, 71–72
cognitive processes in overview, 6–7, 328–329
static diagrams, 6–7, 71, 328–329
decomposition in (See Decomposition) defined, 93
design and, 9, 13, 50–51
and domain-general world knowledge, 9–10, 11
domain knowledge and, 9–12, 209
domain-relevant knowledge and, 9–10
and domain-specific knowledge, 10–11, 15–17, 19–21
exposure and, 26
impedance of by animations, 8, 86, 148, 176, 230, 237
by user control, 212
individual differences, effects on, 16
integrated model of, 5–6, 10
interactivity and, 17–18, 52, 294, 361–362
low-spatial ability, 6–9, 15, 22, 215
of machines (See Machines) measurement, flushing cistern experiments, 13
mental representations in dynamic systems, 50–51, 66–68, 360–361
machines, 5, 7, 15
spatial visualization ability as requirement for, 6–8, 9, 209–210, 212, 215
tests, gear function study, 220–222
Subject Index

Subject Index

Taxonomy, portrayal of, 271
Teachable Agents (TAs)
  agent thought structure, adoption of, 124–125
  animated thought, benefits of, 125–126, 136
  animations, use of, 114, 169
  concept mapping, 124, 129
    described, 115–117, 119, 135–137
  design of, 123–124, 136
  inclusion studies, 124–126
  independent performance studies, 130–135
  initiative studies, 124–126, 128–135, 136–137
  interactivity in, 115, 120
  metacognition, promotion of, 127–130, 172
  Moby, 130–133, 135
  Mr. Davis, 127–129
  principles of, 114–115
  productive agency, achievement of, 119–122
Teaching
  agent thought structure, adoption of, 124–125
  algorithms, 238–239
  approaches to, 365–366
  metacognition, promotion of, 127–130, 172
  multiple perspective enhancement of, 257–258
  sweet spot social interactions in, 122
Technology centered approach to design
  described, 32, 167
Temporal categorization, principles of, 323–328
Temporal chunking, 325–327
Temporal contiguity principle, 37, 38, 40–41
Temporal patterns
  portrayal of, 271, 275–276, 314–316
  visual processing of, 333, 348
Temporal scale, animations rendition of, 269
Text
  benefits of, 5, 12, 21–22
  comprehension
    domain knowledge in, 5, 22
    flushing cistern experiments, 21–24
    high-spatial ability learners, 22
    overview, 21–24, 26
    design/learning strategy integration in, 73
    learning and, 21–24, 334
  Thought, animation of, 116
  Time and date difference study
    animation types, effectiveness of, 100–102, 105, 107–109
    cognitive processing requirements, 100, 173
    materials, 97, 102
  results, 99
  Top-down model of animation
    comprehension described, 4, 50
  Top-down model of event processing
    323
  Trajectory judgment
    animation’s role in, 266
    and spatial ability, 8–9
  Transformation defined, 144
  Transition defined, 145
  Translation defined, 144–145
  Triple-A Game Show, 118
  User-controllable animations. See also Weather map animation study
  benefits of, 52, 210, 345–346
  dynamic systems, user comprehension of, 50–51
  features of, 212–214
  gear function study
    comprehension test scores, 224
    comprehension tests described, 220–222
    domain knowledge in, 220, 223, 224, 225, 230
    learning gains in, 223–225
    methods, 216–222
