

Contents

Preface	<i>page</i> xi
Acknowledgments	xiv
1 The Search for Antiparasitic Agents	1
Early Beginnings of Chemotherapy	1
Paul Ehrlich and the Principle of Selective Toxicity	2
Rational Discovery of Antiparasitic Agents	3
Biology of Parasites	4
Biochemical Adaptation of Parasites to the Host	5
Drug Receptor Selectivity	6
Metabolic Pathways as Targets	7
Empirical Screening of Antiparasitic Agents	8
Use of Animal Models in Screening	9
Use of <i>in vitro</i> Parasite Cultures for Screening	9
Designing Chemicals for Selective Targets	12
Relationship between Chemical Structure and Biological	
Activity of Inhibitors	13
Quantitative Structure Activity Relationship	13
Combinatorial Technology in Drug Discovery	14
References	16
2 Biophysical, Genomic, and Proteomic Analysis of Drug Targets	19
Biophysical Techniques for Studying Drug Targets	19
X-Ray Crystallography	19
Nuclear Magnetic Resonance	20
Use of Recombinant DNA Technology for Studies on Drug Targets	22
Identification of Potential Drug Targets and Candidate Antigens	
for Vaccines Using Expressed Sequence Tags	23

vi Contents

Genomic Analysis of Parasitic Helminths	24
<i>Caenorhabditis elegans</i> Genome	25
Genome Analysis of Trypanosomatids	25
Genome Analysis of <i>Plasmodium falciparum</i>	26
Structural Genomics	27
Proteomics	28
References	30
3 Energy Metabolism in Parasitic Helminths: Targets for Antiparasitic Agents	33
Life Cycles of Representative Helminths	33
Schistosomes (Blood Flukes)	34
The Liver Fluke <i>Fasciola hepatica</i>	34
The Intestinal Nematode <i>Ascaris suum</i>	34
Energy Metabolism of <i>S. mansoni</i>	35
Glucose Transporters	36
The Glycolytic Pathway	37
Inhibition of Glucose Utilization	39
Phosphofructokinase (PFK)	40
Regulation of PFK	40
Activation of PFK and Glycolysis by Serotonin	41
PFK as a Target for Antischistosomal Antimonials	44
Enzymes Involved in Phosphoenolpyruvate Metabolism	46
Mitochondrial Anaerobic Energy-Generating Pathways in Helminths	46
Phosphoenolpyruvate Carboxykinase (PEPCK)	49
Fumarate Reductase	49
Pyruvate Dehydrogenase Complex (PDC)	49
Anaerobic Mitochondrial Metabolism as Possible Targets for Antiparasitic Agents	50
References	54
4 Antimalarial Agents and Their Targets	58
Quinine and Quinidine	60
Chloroquine	61
Concentration of Chloroquine in <i>Plasmodium</i> Food Vacuoles	62
Heme Polymerization: A Target for Chloroquine Action	63
The Proteases of Hemoglobin Digestion	64
Resistance to Chloroquine	70

Cambridge University Press

Contents vii

Antimalarials Used against Chloroquine-Resistant Malaria	74
Halofantrine and Mefloquine	74
Artemisinin (Qinghaosu)	74
Quinine	76
Primaquine	76
Antifolates and Their Targets	77
Dihydropteroate Synthase	77
Dihydrofolate Reductase-Thymidylate Synthase (DHFR-TS)	80
Malaria Resistance to Pyrimethamine	82
Proteases and Merozoite Entrance and Exit from Erythrocytes	83
Antisense Oligodeoxynucleotides	84
References	86
5 Antitrypanosomal and Antileishmanial Targets	90
Tripanothione and Tripanothione Reductase in Protozoa	91
Tripanothione Reductase as a Target for Drug Design	93
Biosynthesis of Tripanothione	93
Effect of Antitrypanosomal Agents on the Tripanothione System	94
Inhibition of Tripanothione Reductase from <i>Leishmania</i> by Trivalent Antimonials	96
Tryparedoxins	97
Antiprotozoal Effects of Nifurtimox	97
Polyamines and Ornithine Decarboxylase	98
Ornithine Decarboxylase Inhibitors as Antiparasitic Agents	99
Glycolysis: A Target for Antitrypanosomal Agents	101
The Glycosome	101
Glucose Transporters	104
Pyruvate Transporters	104
α -Glycerophosphate Oxidase	105
Other Glycolytic Targets	105
Suramin and Glycolysis	106
Melarsoprol	107
Mitochondrial DNA as a Target for Antitrypanosomal Agents	107
Purine and Pyrimidine Metabolism as Targets	108
Purine Salvage Pathways	109
Nucleoside Transporters	111
Nucleoside Ribohydrolases	112
Purine Analogs as Antiparasitic Agents	112
Pyrimidine Metabolism Pathways as Possible Targets	115
Pteridin Reductase in <i>Leishmania major</i> as a Target	116

Cambridge University Press

viii Contents

Antigenic Variation in African Trypanosomes and the Design of Antiparasitic Agents	117
Protein Farnesylation as a Drug Target	119
Cysteine Proteases as Targets for Antitrypanosomal and Antileishmanial Agents	120
References	122
6 Targets in Amitochondrial Protists	129
Biology of Amitochondrial Protists	129
<i>Entamoeba histolytica</i>	130
<i>Giardia intestinalis</i> (<i>G. duodenalis</i>)	130
<i>Trichomonas vaginalis</i>	131
Carbohydrate Metabolism of <i>Entamoeba histolytica</i>	131
Energy Metabolism of <i>Giardia intestinalis</i>	134
Hydrogenosomes and Energy Metabolism in Trichomonads	135
Pyruvate:Ferredoxin Oxidoreductase	137
Mechanism of Antiprotozoal Effects of Metronidazole and Related 5-Nitroimidazoles	138
Resistance to Metronidazole	141
Potentials for New Drug Targets	143
Pyrophosphate Kinases	143
Alcohol Dehydrogenases and Identification of Antiparasitic Drugs by Complementation of <i>E. coli</i> Mutants	146
PFOR as a Target	147
Proteinases as Targets	148
References	150
7 Neuromuscular Structures and Microtubules as Targets	156
Neuromuscular Physiology of Nematodes	156
Nicotinic Acetylcholine Receptors (nAChRs)	157
Nicotinic Acetylcholine Receptors in Nematodes	158
γ -Amino Butyric Acid (GABA)	163
The Action of Piperazine (Diethylenediamine) on GABA Receptors	164
Glutamate as a Neurotransmitter in Nematodes	164
Action of Avermectins on Glutamate-Gated Chloride Channels	165
Glutamate Receptors in the Pharynx of Nematodes	167
Bioamine Receptors in Nematodes	169
Microtubules as a Target for Benzimidazoles in Nematodes	170
Antimicrotubule Drugs	171
Benzimidazoles as Anthelmintics	173
Resistance to Benzimidazoles	173

Cambridge University Press

Contents ix

Neuroactive Peptides in Nematodes	174
The Neuromuscular System of Flatworms	175
Evaluation of Motility of Flatworms	176
5-Hydroxytryptamine (Serotonin) in Parasitic Flatworms	176
Cholinergic Systems in Flatworms	178
Influence of Parasite Motility on Parasite Location in the Host	178
Anthelmintics That Act on Motility in Platyhelminths	180
Neuropeptides in Flatworms	180
Potential Research on Anthelmintics	181
References	183
8 Targets in the Tegument of Flatworms	189
Structure and Function of Schistosome Tegument	189
Some Proteins Identified in Schistosome Tegument	192
Protein Attachment to the Tegument	193
Glucose Transport across the Tegument	194
Tegumental Acetylcholine Receptors, Acetylcholinesterase, and Glucose Uptake by Schistosomes	196
Metrifonate (Bilarcil) as AChE Inhibitor and Antischistosomal Agent	197
Potential Studies on Tegumental Nicotinic Targets	198
Praziquantel (PZQ)	199
Mechanism of Action of Praziquantel	199
Antigens That Attract the Host's Immune System	201
Resistance of Schistosomes to PZQ	202
Potential Studies on Ca ²⁺ Influx across the Tegument	204
Oxamniquine	205
Dyneins in <i>Schistosoma mansoni</i>	206
The Effect of Triclabendazole on <i>Fasciola hepatica</i> Tegument	207
Drugs Acting on the Tegument of Cestodes (Tapeworms)	208
References	209
Epilogue	215
References	219
Index	221
