
Index

- advection equation, 261, 267
 - weak solution of, 62, 82, 261, 267, 269, 275, 277
- aliasing effect, 211, 225–227
- antidiffusion, 168
- B-splines, 227–229
- baroclinic, 9
- Beale's iterative technique, 86, 208–211, 242
- Birkoff–Rott equations, 13
- blob
 - variable
 - for diffusion scheme, 152–154, 235
 - for velocity calculation, 21, 49–50, 235
- vortex, 10, 21, 173, 183
 - near boundaries, 114–117, 252
- boundary condition
 - far-field, 18, 19, 238, 251, 256
 - interface, for domain-decomposition method, 252, 255, 259, 260
 - kinematic, 93
 - no-slip, 172, 174, 236, 251
 - no-through-flow, 31–32, 244
 - periodic, 13, 27, 32–33
 - pressure, 177
 - in three dimensions, 200–205
 - vorticity, 179–181
 - vorticity flux, 189, 201
- boundary elements, 192
- boundary layer, 185, 202, 256
- Calderon theorem, 248, 279
- Courant–Friedricks–Levy condition, 43, 251
- conformal mapping, 94
- conservation
 - of mass, 5
 - of momentum, 5–6
- conservation properties
 - in three dimensions, 59–61, 65–68
 - in two dimensions, 18, 53
- contour dynamics method, 70, 84
- convection–diffusion equation, 125, 154
- convergence analysis
 - for particle strength exchange, 148–152
 - for random-walk, 133–136
 - for viscous splitting, 127–130
 - in three dimensions, 75–84
 - in two dimensions, 34–50
- coordinate mapping
 - for boundary conditions, 187
 - for particle-grid operators, 240, 241
 - for variable-blob method, 153, 259
- core-spreading method, 70, 74, 165–167
- cutoff function, 10, 20–27, 33, 58
- cylinder
 - impulsively started, 137, 195–198, 256–258
 - wake, 157
- Delaunay triangulation, 213
- diffusion equation, 125, 142, 192
- distribution representation lemma, 276
- domain-decomposition method, 237–238, 251–260
- ellipse calculation, 29–31, 231–235
- energy, 18, 51, 53, 54, 65–68, 181, 283
- enstrophy, 148–149, 161, 168, 191, 282
- Eulerian description, 3, 5
- fast solver, 212, 214–218, 284–299
- filament surgery, 64, 70, 164
- filtering, 167, 168
- finite-difference
 - methods, 18, 21, 237, 248–256, 260

- finite-difference (*contd.*)
 schemes
 for boundary conditions, 187
 for Laplacian on irregular mesh, 160
 for stretching computation in three-dimensional schemes, 69, 82
- Fourier analysis
 for cutoff construction, 23–24
 for deconvolution scheme, 210–211, 243
 for interpolation scheme, 222–226
- Fredholm
 alternative, 102
 integral equation, 101
- Gauss quadrature points, 27, 264
 Green's function, *see* kernel
- hairpin, 164–165, 168
 Hamiltonian system, 18, 52
 Helmholtz decomposition, 85, 90–92
 Helmholtz laws, 7
- Images
 method of, 94, 117
- impulse
 angular, 51, 53, 206
 linear, 22, 51, 206, 222, 230
- initialization, *see* particle initialization
- interpolation technique
 for filament method, 68, 69, 73
 for particle-grid matching, 238–241, 255, 259
 area-weighting formula, 239
 triangular-shaped cloud formula, 240
 for regridding scheme, 219, 222–230
- Kelvin's theorem, 9–11, 19, 56, 61, 62, 105, 181, 182
 Kelvin–Helmholtz instability, 14, 71
- kernel
 construction of mollified, 14, 22, 25–27, 57, 58
 for Biot–Savart law, 13, 32, 33, 56
 for diffusion equation, 128, 130–132, 142, 143
 for particle strength exchange scheme, 145–148
 for Poincaré identity, 95
- Kutta condition, 91, 102, 106–107, 109
- Lagrangian
 description, 2
 element, 10, 22
 formulation, 19
- Laplace's equation, 93–94
 Large eddy simulations, 123, 164, 168
 Lighthill's algorithm, 181
- material
 derivative, 3
 element, 2, 10, 19
 line, 9, 12
- measure solution, *see* advection equation, weak solution
- moment conditions
 for cutoff functions, 22, 37
 for diffusion, 147, 163
 for regridding scheme, 45, 221, 222, 224, 229
- Monte Carlo method, *see* random choice
- multipole expansions, 114, 286–288
- N*-body problem, 114, 284
 Navier–Stokes equation, 124
 Neumann boundary condition
 for diffusion, 189–194
 for pressure, 260
- numerical dissipation, 17, 18, 53, 237
- overlapping
 condition, 10, 34, 36, 39, 45–47, 65, 84, 86, 206, 207, 211, 236, 248
 subdomains, in domain-decomposition method, 252, 255, 256
- panel methods, 109–114
- particle, 10, 18, 20, 21
 approximation of function by, 261–264, 271–275
 distortion, 206–207
 initialization, 21, 26–30, 44, 262
 solution to advection equation, 273
- particle strength exchange scheme, 145–148, 197, 204, 207, 210, 245, 254, 255, 259
 with variable blob size, 153
- Poincaré identity, 91, 95, 99, 100
 proof of, 280–282
- Poisson
 equation, 12, 13, 57, 98
 solver, 244
 summation formula, 223, 263
- Prandtl equation, *see* boundary layer
- pressure, 6, 19, 259, 260
- quadrature
 adaptive, 217–219
- quadrature formula
 for midpoint rule, 14, 27, 29, 35, 48, 68, 82, 83, 263–264
 for random choice, 28, 131, 134, 135, 264–266
- random choice
 for particle initialization, 27–30, 207, 264–267

- random choice (*contd.*)
 - for particle resampling, 47, 145
- random walk, 130–141, 186, 202, 265
- regridding scheme, 29, 45, 208, 221–237, 254–256
 - for interface condition in domain-decomposition method, 254
 - for three-dimensional calculation, 55, 70, 71, 87, 89
- regularization error, 35, 43, 79, 114
- resampling, 141–145
- Reynold's transport theorem, 4

- Schwarz algorithm, 253, 259, 260
- shear flows, 28, 29, 49, 54
- shear layer, 70–72, 219
- shedding, 157
- Sobolev
 - inequality, 264
 - space, 262
- spectral methods, 21, 197, 237, 245–246
- stability
 - estimates for advection equation, 261, 269, 275
 - for particle strength exchange, 143
 - for particle-grid assignment, 241, 242
 - for viscous vortex-in-cell method, 249, 251
- strain, 206, 207, 219, 231, 236
- streamfunction, 96, 98
- stretching, 55–59, 64, 69, 81, 244
- subgrid model, 55, 64, 164, 167

- time discretization
 - forward Euler scheme, 43, 148
 - numerical analysis, 43
 - Runge–Kutta scheme, 21, 53
- transport equation, *see* advection equation
- tree data structure, 294–296
- triangulated vortex method, 116, 159, 208, 211–216

- velocity–pressure formulation
 - in domain-decomposition method, 237, 238, 251, 252
- viscous splitting, 124, 127, 181
- Voronoi mesh, 160, 213, 214
- vortex
 - blobs, *see* blob
 - dipole, 197, 199, 200
 - patch, 209, 215, 216–219, 231–235
 - ring, 61, 72, 73, 86, 165, 201–205
 - shedding, 107–110
 - sheet, 10–18, 97–98, 173, 174, 183, 184, 282, 283
 - tube, 7, 61, 64
- vortex-in-cell methods, 116, 204, 222, 237, 244–251

- vorticity
 - boundary conditions, 178
 - definition, 1
 - divergence, 1, 84–89, 202
 - flux, 175–177, 189, 205

- wake, 64, 256
- weak solutions, 12, 20, 35, 261, 275
