Preface	<i>page</i> ix
<b>1 Definitions and Governing Equations</b>	<b>1</b>
1.1 Kinematics of Vorticity	2
1.2 Dynamics of Vorticity	5
1.3 Helmholtz's and Kelvin's Laws for Vorticity Dynamics	7
<b>2 Vortex Methods for Two-Dimensional Flows</b>	<b>10</b>
2.1 An Introduction to Two-Dimensional Vortex Methods: Vortex Sheet Computations	10
2.2 General Definition	18
2.3 Cutoff Examples and Construction of Mollified Kernels	22
2.4 Particle Initializations	26
2.5 The Case of No-Through-Flow or Periodic Boundary Conditions	31
2.6 Convergence and Conservation Properties	34
<b>3 Three-Dimensional Vortex Methods   for Inviscid Flows</b>	<b>55</b>
3.1 Vortex Particle Methods	56
3.2 Vortex Filament Methods	61
3.3 Convergence Results	75
3.4 The Problem of the Vorticity Divergence for Vortex Particle Methods	84

vi	<i>Contents</i>	
<b>4</b>	<b>Inviscid Boundary Conditions</b>	<b>90</b>
4.1	Kinematic Boundary Conditions	92
4.2	Kinematics I : The Helmholtz Decomposition	92
4.3	Kinematics II: The $\Psi$ - $\omega$ and the $\mathbf{u}$ - $\omega$ Formulations	96
4.4	Discretization of the Integral Equations	110
4.5	Accuracy Issues Related to the Regularization near the Boundary	114
<b>5</b>	<b>Viscous Vortex Methods</b>	<b>121</b>
5.1	Viscous Splitting of the Navier–Stokes Equations	124
5.2	Random-Walk Methods	130
5.3	Resampling Methods	141
5.4	The Method of Particle Strength Exchange	145
5.5	Other Redistribution Schemes	159
5.6	Subgrid-scale Modeling in Vortex Methods	164
<b>6</b>	<b>Vorticity Boundary Conditions for the Navier–Stokes Equations</b>	<b>172</b>
6.1	The No-Slip Boundary Condition	174
6.2	Vorticity Boundary Conditions for the Continuous Problem	179
6.3	Viscous Splitting Algorithms	181
<b>7</b>	<b>Lagrangian Grid Distortions: Problems and Solutions</b>	<b>206</b>
7.1	Circulation Processing Schemes	208
7.2	Location Processing Techniques	219
<b>8</b>	<b>Hybrid Methods</b>	<b>237</b>
8.1	Assignment and Interpolation Schemes	238
8.2	Vortex-In-Cell Methods	244
8.3	Eulerian–Lagrangian Domain Decomposition	251
	<b>Appendix A Mathematical Tools for the Numerical Analysis of Vortex Methods</b>	<b>261</b>
A.1	Data Particle Approximation	262
A.2	Classical and Measure Solutions to Linear Advection Equations	267
A.3	Mathematical Facts about the Flow Equations	278

<i>Contents</i>		vii
<b>Appendix B Fast Multipole Methods for Three-Dimensional N-Body Problems</b>		<b>284</b>
B.1 Multipole Expansions		286
B.2 The Poisson Integral Method		291
B.3 Computational Cost		293
B.4 Tree Data Structures		294
Bibliography		301
Index		311
