THE GENDER DIVISION OF WELFARE
The Impact of the British and German Welfare States

*The Gender Division of Welfare* is an ambitious new study that raises interesting and important questions concerning the relationship between welfare states, gender differentiation and social inequality. The book traces the consequences of different welfare state and social policy arrangements for women and men and the households in which they live. Mary Daly examines the British and German welfare states showing that both countries differ markedly in the measures they have instituted in various areas. These include the support of families with children, as well as policies established for the provision of care for the ill and aged. The author investigates how each of these hugely influential welfare state models affects financial relations between women and men and the extent to which women and men can participate in the labour market and the family.

**Mary Daly** is Professor of Sociology at the Queen’s University of Belfast. Previously, she worked at the Georg-August Universität Göttingen, Germany, and the European University Institute, Florence, Italy. Mary Daly has completed a number of projects for the European Commission and is a member of a number of international networks on gender and the welfare state. Her many publications include *Women and Poverty* (1989), and *European Homelessness: The Rising Tide* (1992).

Acknowledgements

In terms of data sources and related assistance, I should first like to thank Hans Peter Blossfeld and Götz Rohwer, who were invaluable in gaining access to the German Socio-economic Panel while I was a researcher at the European University Institute in Florence. For access to the Family Expenditure Survey, I acknowledge the assistance of the Data Archive at the University of Essex and thank them and the Deutsches Institut für Wirtschaft for permission to use their data.

During the course of my writing this book, part of which was spent at the European University Institute, I benefited from discussions with many people and from participation in many seminars. I especially thank Colin Crouch and Yossi Shavit for their constructive responses to my work. The book was completed while I was a staff member of the Georg-August Universität in Göttingen. I would like to thank my colleagues at both the Institut für Sozialpolitik and ZENS for their responses to the various papers that I presented at seminars and for their friendly welcome to Germany. Among these I wish to make special mention of Jens Borchert. This would have been a much more difficult task without the intellectual and personal support of friends and colleagues like Johan DeDeken, Bernhard Ebbinghaus, Pauline Ginnety, Barbara Macleman, Axel West Pedersen, Carmen Sarasua Garcia, Kirsten Scheiwe and Anne Sinnott.

Many other people made a valuable contribution to the work by reading drafts and generously sharing their ideas and knowledge. Jane Lewis deserves special mention in this regard. Other people who helped and whom I thank include Dorothea Herreiner, Stephen Jenkins and Katherine Rake.

I also acknowledge the helpful comments of the anonymous reader for Cambridge University Press and the assistance there of Phillipa McGuinness and Paul Watt.
