- absenteeism, 203, 223–34
- academic difficulties, 199, 207
- academic pressure and sleep patterns, 204, 241, 244
- academics, 8–9, 132
- accidents: employment and increased risk for, 159; extended work hours and risk for, 169; irregular sleep and, 136; risk associated with sleep deprivation, 173; sleep patterns in Italian students and, 141; survey of, 222
- acetylcholine, 32
- Ache, 72; bedding, 73; fire, 75; infant breast feeding and lap sitting, 95–6; panther predator tale, 81, 90
- actigraph: in delayed sleep phase case vignettes, 247, 248, 250; in rhesus monkeys, 59–61; school transition study, 17; shiftwork study and, 162–3
- actimeter, *see* actigraph
- active learning, 213
- activity offset in rhesus monkeys, 61–3
- activity onset, 14; in *Octodon degus*, 43, 46f
- activity rhythms: effects of sex steroids on, 36; in *Octodon degus*, 43; in rhesus monkeys, 16
- actograms: of *Octodon degus*, 45f; of rhesus monkeys, 60f
- adaptation to stress, 238
- ADHD/IEP, 223–34
- adolescence, definition of, 270
- adolescent development, 237; changes in sleep timing and evolutionary ecology of sleep, 103; circadian timing system and, 16; homeostatic process and, 12–13
- adult enrichment and school start time, 179
- adult status, 270
- affect regulation, 270–82
- affective arousal, 277
- affective disorders, 238, 259, 262, 279
- affective dysregulation, 278
- afternoon performance, 174
- age, 229t; adjustment to early start, 161, 164; effects with work delay, 164; hours spent working and, 205f; relaxation to sleep habits, 134–6, 140; shift work, sleep, and tiredness, 163; sleep and dream response to trauma, 246
- aggressive behavior: REM sleep loss, 20
- agriculturalist, 71–2
- air quality, pollution, 74–5, 82
- alarm clock, 6
- alcohol: academic performance and, 140; avoidance, 215; consumption in adolescents, 122; drugs and, 223; sleep deprivation and, 173; working and, 203, 206
- alertness, 8, 41, 148–9, 173; computerized test for, 162, 166; as a continuum in traditional societies, 101–2; effects of naps on, 214; employment and, 159, 165; school and work start time and, 161, 213
- allergen producers, 74
- American Automobile Association Foundation for Traffic Safety, 157
- American students, 126, 128, 142, 144
- Anders, Thomas, xiii
- animal models of puberty, 27–8, 33, 42–3, 47–8, 51–4
- animals' influence on sleep, 80–1
- anthropologist, anthropology, xv, 70
- anticipatory anhedonia, 279
- anxiety: accidents and, 141; scale, 133; school achievement and, 140; sleep and, 118, 140, 144, 173, 209, 238, 241, 242; sleeping pill use and, 145; symptoms and depression vulnerability, 278
- anxiolytics, 138–9

- arecoline, 261
arousal regulation in adolescence, 280, 282
arousal threshold in posttrauma veterans, 240
arousals: effects of, 263–4; parent-child correlation, 258
aspirin, 138–9, 145
athletics, 9, 198; school start time and, 175–6, 195, 212; sleep and, 204
attendance at school: school start time and, 192, 196–7; sleep patterns and, 222
attention: effects of zinc deprivation on, in rhesus monkeys, 56; in linkage of neurobehavioral systems, 281; loss of, with extended work hours, 169; problems at school and sleep patterns, 140–1, 143; socialization of state regulation, 99, 101
attentional processes and romantic experiences, 274
Australian students, 125, 144
Austrian students, 144
automobile accidents/crashes, 20, 155–6; associated with falling asleep, 148, 156t
awakenings in borderline personality disorder, 261
awkwardness of adolescence, 271
- Baktaman, 72; bedding, beds, 73; dogs and sleep, 80; fire and air pollution, 74–5; infant lap cradling, 96; influence of menstrual cycle on women's sleep conditions, 91; initiation ritual and sleep deprivation, 89; nocturnal boredom in, 92; rare nocturnal dances, 86; sex differences and sleeping conditions in, 92
Balinese, 72; bed and bed-sharing, 78; fear, sleep in, 99–101; incense burners to deter insects, 76; infant sleeping, 96; napping, 93; nocturnal rituals, 79, 86, 88, 100; social sleeping, 96
Bearpark, Helen, xvi, 148n
bedbugs, 74
beds (*see also* sleeping conditions, for Westerners), 73, 78
bedtime(s): adolescence maturation and, 119, 200; of adolescents, 126; advancing in shift workers, 160; delayed, 236; early morning start delay and, 164; effects of employment on, 9–10; effect of visitors on, 86–7; fear and elderly bedtime in Lese, 82, 91; fluid, 71, 79; grades and, 207; influence of beliefs about sleep, 90–1; of Italian students, 135t; lack of in foragers, 79; late in Gabra herders, 83; later on weekend, 142, 220; of prepubescent children, 209; reason for, 6–8, 136; reason for later, 204; in São Paulo students, 122–3; schedule regularity, 221–30; school start time and, 141; school transition study, 17; sex differences in Italian students, 134–6; sleep complaints and, 128; sleep disruption and, 77; in Western cultures, 104
behavior problems, 199; externalizing, 203; instructional time and, 174; sleepiness and, 173, 208
behavioral testing of rhesus monkeys, 57
beliefs and sleep, 90–1, 104
benzodiazepines, 138, 145
binocular vision, 275
biological clock, *see* circadian rhythms
biological rhythmicity, 119
body movements, heritability of, 258
bone mineralization, 51
Borbély, A. A., xiv
borderline personality disorder, sleep patterns of, 260–1
brain development, 54–5, 64; sex differentiation, 55
Brazilian students (*see also* São Paulo), 201
breakfast and school start time, 193
breast feeding, 95
Brown, Bradford, 10
Brown University, 149, 154, 184
bruxism, 120–1
burns from nocturnal fires, 75
Burton, Richard, 88
bus transportation: costs, 175; safety, 175; school start and, 168, 183, 202, 212
- caffeine, 229t; academic performance and, 140; avoidance, 215; consumption in adolescents, 122; employment and, 206; trouble falling asleep and, 126
California Regional Primate Research Center, 57
camels, 80
Canada, 209
carrying-sleeping devices, 90
Carskadon, Mary A., x, xi
case vignettes of sleep phase delay, 247–51
castration replacement, 37
central nervous system: effects of sex steroids on maturation, 33; influence of puberty on, 32–3
chamber of commerce, 181–2
Chase, Michael, xiv
chemical solvents and drowsiness, 169
Chernobyl, 20
child abuse and sleep disruption, 245
child labor laws, 214

- childcare practices, 69, 90; and school, 178, 181
- children: latency-age, x
- cholinergic system, 261–4
- chorionic gonadotropin and pineal tumors, 34
- chronobiology, *see* circadian rhythms
- circadian rhythms, 173–4, 209; of activity in rhesus monkeys, 52; effects of sex steroids on, 36–7; ontogenetic changes, 118
- circadian timing: system, 11, 13–17, 40–1, 201, 220, 234; of work, 159–60, 168–9
- circumcision, 239
- climate, 92
- cognition: skills, power, and fluency, 271
- cognitive and emotional processing, 270, 274, 278, 282; influence of pubertally activated drives, 271–2; link between, 277; romantic experiences and, 274; sensitivity to sleep deprivation, 280
- cognitive-behavioral therapy, 281–2
- cognitive-emotional integration, 269, 276
- cognitive function, 55
- cognitive perception, insufficient sleep, 21
- college students, 126; driving risks and, 49–8; erratic schedules and, 149; napping in, 214
- community education, 172; facilities, 178; school start time and, 175, 178
- comparative biology, xv
- Connecticut, 211
- contractual agreements, 172
- coping, 236; behaviors and sleepiness, 208; with stress, 238–9
- core body temperature, 13
- cortical lesions, 278
- cortical maturation and homeostatic process, 12
- cortical metabolic rate, 54
- cortisol, reduction in nocturnal urinary-free, in depression, 257
- countermeasures: for adolescent sleep, 211–15; for alcohol impairment while driving, 154, 155t; for sleepiness while driving, 154, 155t, 158
- creativity, decreased with sleep deprivation, 173
- crime: school start time, 182; statistics, 172
- critical periods of development, 275–6
- cross-cultural literature, 71
- cultural attitudes toward sexuality, 243
- culture, 69
- darkness: athletics and, 176; constraints on human activities, 102–3; “evil forces” and, 241; school start time and, 176, 181, 212
- daughter guarding, 97
- day length, 92
- death of sibling and sleep, 244
- delay scale, 223–34
- delayed sleep phase syndrome, xi, 132, 207, 244; case vignette, 247–8, 250
- delinquency, 20
- delta EEG counts and depression, 256
- delta power: changes in adolescence, 54; homeostatic process and, 11
- Dement, William, xiii, xiv
- dendritic growth, effects of sex steroids on, 33
- Department of Labor, 203
- depressed mood, depression, 208, 233f; accidents and, 141; after school “self-care” and, 10; comparison with normal, 242; familial sleep markers, 257–9, 260–2; family-genetic aggregation, 264; irregular sleep and, 220, 242; predictors of recurrence, 256; rate of in offspring of major depressives, 262; recurrence of, 254; REM density, 254; risk for, 257, 259, 265, 282; scale, 133; school start time and, 185; sex differences, 228, 229t; sleep and, 118, 140, 145, 173, 208, 226, 227t, 254, 256, 257, 262; sleeping pill use and, 145; studies of high-risk samples, 260–2; subtle sleep disruptions as pathways to, 264–5; trait markers, 257; unipolar, REM latency and lifetime risk for, 258, 260; vulnerability to, 278–80
- diaries of sleep-wake, 162–3, 164f
- dim light for melatonin measurement, 14, 17
- disengagement from school, 199
- disorders of initiating and maintaining sleep, 239, 247
- diurnal pattern: of activity in *Octodon degus*, 44, 47; of foraging, 84; of sleep, 72
- dopamine, 32
- Dornbusch, Sanford, 10
- dreams: loss of soul (*atma*) in, 91; spirit of wandering and, 90; trauma and, 245
- driver training programs, 157–8
- drives activated at puberty, 272
- driving, under influence of alcohol, 149–8, 152t; while sleepy, 148–58, 169, 206
- dropout: and employment, 204; and school start time, 196
- Dunn’s Learning Styles Inventory, 174
- early morning awakenings: in adolescents, 169; in Italian students, 137, 144–5

- ecology of sleep: biotic microecology, 80–3; comparative developmental, 69–112; components of, 71–2; developmental, 95–102; emotion regulation and, 109–10; evolutionary, 70–1, 102; influence of physical ecology, 92–3; microecology, 73–80; protection and safety, 71–2; sleep structure, 76–7
- ectoparasites, 74, 82
- Edina, Minnesota, 172; case study of school start time, 187–94; focus groups, 187–92; parent written survey, 192–4
- Efe, 72; bedding, 73; dogs (bisinje) and sleep, 80; grooming for ectoparasites, 82; huts, 76–7; lack of bedtime, 79; napping when sick, 94; nocturnal social activity, 85; protection by fire, 75; sex differences in sleeping, 92; sleeping arrangements, 77
- Egypt, zinc deprivation, 55
- elderly and sleep, 41, 103
- electroencephalogram (EEG): changes, 54; sleep episodes at work and, 160
- elementary school, 172, 180, 186f, 202, 208
- emotion regulation: in adolescent development, 269, 282; sleep ecology and, 109; well-being, 207–8
- emotions: activated at puberty, 272; feelings, negative and positive, 237; turmoil, 236
- employment, *x*, 1, 21, 199; comparison of adolescents and adults, 169; double shifts, 165; early start time and, 160; effects on sleep, 9–10, 210f; effects of work patterns, 83–5, 104, 107; extended work hours, 165, 168–9, 203; part-time, 133, 159, 198; positive impact of, 204; pressure to work, 202; school start time and, 181–2; sleep regulation and, 280; work after athletic practice, 177
- endocrine changes in puberty, 27–37
- environmental exposures, fatigue, sleep loss, sleepiness and, 169
- epinephrine, 32
- estradiol, 41; effects on hamster circadian oscillator, 47; feedback on GnRH pulse generator, 32; folliculogenesis in the ovary, 31; receptors in CNS, 33
- estrogen: effects on activity onset, 36; receptors in cortex, 55
- ethnographers, ethnography, 71–2, 95
- European students, 125, 144
- evolution, 69–70; adaptive response to stress, 239; influence on sleep, 102–4
- executive function and adolescent development, 269, 271–2
- exercise and sleep hygiene, 215
- expected level of education, 223–34
- experience-expectant learning, 275
- extracurricular activities, 9, 198, 204; school start time and, 175–7, 195
- falling asleep at night: as a stressor in anxious adolescents, 241; difficulty, case vignette 2, 250–1; difficulties in Italian students, 136–8, 144; relation to sleep patterns, 124; sleeping pills and, 145; trouble in, 118, 121, 125–6, 128
- falling asleep in school, 208; age and sex effects, 140; driving accident risk and, 155; effects of employment on, 9; insufficient sleep and, 207; irregular sleep and, 136; percentage of high school students, 173; school start time and, 141
- falling asleep while driving, 155t, 156t
- familial sleep markers of depression, 257–9
- fatigue: as a source of stress, 241; delayed phase case and, 247; reduced total sleep time and, 207; reports with delay start time, 164, 165f; work and, 160, 162, 169
- fear, fearfulness: of being alone at night, 250; of growing up, 248; in poor sleepers, 242; sleep as a source of, 240
- fear sleep (*tadoet poeles*), 99–101
- fertility, *see* reproductive competence
- filarial worms, 82
- Finnish Institute of Occupational Health (FIOH), 160–1
- Finnish students, 125, 142, 144
- fire, 74–6, 101, 107
- fluoxetine, 257
- follicle stimulating hormone, GnRH influence on, 31
- follicular phase, *see* menstrual cycle
- food intake, 51
- food service, 172
- forager, 71–2; bedding, 73; dispersed settlements of, 90; fire as protection from predators, 74; labor and sleep patterns in, 83–4; seasonal and diurnal foraging patterns, 84
- “forbidden zones” for sleep, 14
- Fore, introduction of blankets, 74
- France, 209; students in, 144
- frontal cortex, synaptic pruning and myelination in, 54
- fumigant, fire as, 74
- Gabra, 72; animal noises in encampment, 80; bedding, beds, 73; bedtimes and rise times in herders, 83; belief in loss of soul (*atma*) in dreaming, 91; dogs and sleep,

- 80; escape from nocturnal social activity by sleep, 85; fire, 74–5; incense burners to disguise human odors, 76; midday heat, labor, and napping, 83–4, 93; night travel, migration, and visitors, 86; sex and sleeping conditions, 92, 94; sleep deprivation in wedding ritual, 89; sleep life history example, 98; sleep patterns in satellite camps, 84; sleeping platform, 78
- gamma-aminobutyric acid (GABA), 32; reduction of inhibition at puberty, 33
- gas utility study, 165–8
- Gebusi, 72; all-night dances and feasts, 86; bedding, beds, 73; dogs and sleep, 80; fire, 74–5; influence of beliefs about the spirit double, 90; long house dwelling, 76; male late night ritual seances, 84, 87; rest in women, 84, 102; sexual and sleeping conditions, 94; sleep life history example, 98–9; sleeping arrangements, 76–8, 92, 101; socialized somnolence, 87, 91, 101
- gender differences, *see* sex differences
- gene expression: gonadotropin, 31
- general adaptive syndrome (GAS), 238
- genetic component: of activity onset in littermates, 46–7; in arousal response to threat or novelty, 280; in depression, 258–9, 278
- geographic region: of Italian students, 133; impact on sleep patterns, 140, 144
- goal-directed cognitive processes, 279
- goats, 80
- gonadal steroids, *see* sex steroids
- gonadotropin releasing hormone (GnRH): deficiency, 31; GnRH pulse generator, 31–5; and melatonin inhibition, 36; in monkeys, 52; and puberty, 30, 33–4; pulsatile release of, 30–5
- good sleepers, 242
- grades, *see* school performance
- graduation rates and school start time, 196–7
- Great Transitions: Preparing Adolescents for a New Century*, ix
- grieving and sleep disruption, 245
- grooming for ectoparasites, 82
- growth, *see* physical growth
- growth hormone, 30; in monkeys, 52
- hamsters: effects of estradiol on circadian period and splitting, 47; estrogen effects on activity, 36–7
- head bumping, 120–1
- health status: of high school students, 120, 125; problems with, 122; self-assessment of, 223–34
- herbal teas, use of for sleep, 139
- heritability of sleep, 258
- hierarchical multiple regression, 224
- high school students, 119, 221
- Hiwi, 72; bedding, 73; hammock sleeping and sleep disturbance, 77, 82; napping, nutrition, anemia, 93–4; protection by fire, 75, 82
- Holocaust survivors and dream recall, 240
- homedays (variable), 223–34
- homeopathic remedies, use of for sleep by Italian students, 139
- homeostatic mechanisms: biobehavioral, 236; capacity and depression risk, 265; for sleep regulation, 10–13, 40–1, 220, 4; sleep-wake regulation and depression risk, 257
- homework: reason for bedtime, 6, 8, 136; time spent on, 204
- horticulturalist, 71–2; labor and sleep patterns in, 83–4; seasonal labor demands and sleep in, 84
- human predation, 81
- hyperarousal, 239
- hypersexuality associated with sleep deprivation, 173
- hypervigilance, 238–9, 247
- hypothalamic pituitary adrenal (HPA) axis, 257, 264
- hypothalamic-pituitary gonadal (HPG): communication, 31; HPG axis at pubertal onset, 33–4
- hypothalamus, 35f, 52; arcuate n. and pulsatile GnRH release, 30
- immune system: napping, 94; sleep loss, 20
- impulses activated at puberty, 272
- incest taboo, 69
- inhibition of prohibited behaviors, 276–7
- infants: carrying of, 96, 96n; lap cradling, 95–6, 96n; role in evolutionary ecology of sleep, 103; sleep as a stress response, 239, 245; sleep disruption and separation, 245; sleep of, 95–6, 110; socializing sleep-wake patterns of, 79; state regulation of, 69
- information processing, 173
- infundibulum, 30
- inhibit, 31
- injury, 20; employment and, 159, 169; survey of, 222–34; with alcohol/drugs, 227t
- insects: borne disease, 82; deterrence of by incense burners, 76, 82; deterrence of by smoky fire, 75, 82; and sleep environment, 74
- insomnia, 121, 244, 259

- morningness-eveningness (*see also* phase preference): adjustment to early start time, 203; attention problems at school and, 140; bedtime and wake time, 119, 201; daytime sleepiness and, 129; in high school students, 125, 133; irregular sleep schedule and, 224–34; maturational change and, 119; morning and evening performance and, 174; in older and younger workers, 161; questionnaire, 120; scale, 224; in 6th grade girls, 201
 mortality in monkeys, 52
 mosquitoes, 71; disease vector, 82; malaria and smoky fires, 75; relative absence in Westerners, 105
 motivation, 272, 277
motoro, 94–5
 multiple sleep latency test (MSLT), x, 203; description of, 12; and homeostatic process, 11; REM sleep, 18; school transition study, 17–9

 naloxone, 31
 napping: association with heat and water stress, 84–5; in Balinese, 93; biphasic sleeping and, 93; in case vignette, 249; as a countermeasure for sleepiness, 213–15; driving accident risk and, 155; effects of nutrition and illness, 94; extended work hours and, 166, 167f; in Gabra, 83, 93; in Hiwi, 93; in Italian students, 136, 143; of São Paulo high school students, 123; in Swat Pathan, 93;
 narcolepsy, 18, 121, 125, 207, 260
 National Commission on Sleep Disorders Research, x
 National Institute for Occupational Safety and Health-US (NIOSH), 160, 165
 National Sleep Foundation, 157–8
 National Survey of Families and Households, 203
 negative affect, sense of self-worth and, 274
 negative affective bias, 272, 279
 negative attributional style and depression vulnerability, 279
 negative cognitive bias, 280
 neonates, sleep in offspring of depressed and controls, 262
 neural plasticity, 272, 275–6
 neuroendocrine changes at puberty, 30–2
 neuropeptide Y, 32
 neurotransmitter, changes in receptor distribution, 54
 New Zealand, 209
 N-methyl-D-aspartate (NMDA): NMDA agonists in rat, 34; NMDA projections, 34; onset of puberty, 32; receptors for in pubertal rat brain, 32
 nicotine avoidance, 215
 night wake-ups, night wakings, 121, 144–5
 nightmares, 121, 239
 nighttime wakings, long, 137
 nocturnal emission and ejaculation, 236
 noise: animals and, 80; in bedroom, 122; contrast in Western and non-Western, 106–10; cosleeping and, 78; fire and, 74–5; performance at work and, 169–70
 non-REM time in relatives of depressed, 260
 nonsteroidal anti-inflammatory drugs (NSAIDs), 138–9, 145
 norepinephrine, 32
 nutrition: effects on napping, 93–4; and recommended dietary allowances (RDAs), 51; in rhesus monkeys, 50–4

 obsessive-compulsive disorders, 274
Octodon degus, 42–8
One Timeless Spring, 273–4
 opioid peptides, 32
 oscillator: change in period of circadian, 47; circadian, 13–14, 40–1, 47; coupling to overt rhythms, 47; lack of effort of estrogen and progesterone on in *Octodon degus*, 48; pulsatile release of GnRH, 30
 over-the-counter remedies for sleep, 139, 145
 oversleeping, employment and, 9, 206
 ovulation, 32; first in rhesus monkeys, 53f
 owl and lark, *see* morningness-eveningness

 Pakistan, Swat Pathan, 72
 panther, predator tale of Ache about, 81
 Papua, New Guinea: Baktaman, 72; Fore, 74; Gebusi, 72; sexual practices, 94
 Paraguay, Ache, 72
 parasites in bedding, 74
 parasomnias, 120–1
 parent(s): adolescent employment and, 159; dependency on, 249–51; influence on sleep patterns, 6–8, 136, 142–4, 209, 243; involvement in schools, 207; occupation of, 134; school start time and, 172, 180; survey of best time to leave home, 186t, 187t
 parent-child correlations of sleep measures, 258
 pastoralist, 71–2; dispersed settlements of, 90; seasonal satellite camps, 84
 pediatricians, 199

peers: academic failure and relations with, 244; influence of bedtime, 8, 142; social ties with, 249–51
 perceived risk: of driving under the influence of alcohol, 149–8, 152f, 153f, 157; of sleepy driving, 149–8, 152f, 153f, 157
 perception of impairment: by alcohol, 153, 154t; by sleepiness, 153, 154t
 performance testing, shift work and, 160
 personality and sleep patterns, 242
 pharmacologic probe paradigm: in depression, 261; in high-risk adolescents, 262–4
 phase advance associated with exercise, 215; in hamster activity at proestrus, 36–7
 phase angle, 47
 phase delay: associated with exercise, 215; associated with academic anxieties, 244; of circadian rhythms, x, 19, 48, 119, 201; of melatonin, 16; puberty and, 201; of sleep timing, xiii, 40, 47, 118, 119, 128–9, 132, 201; weekday to weekend, 123
 phase preference (*see also* morningness-eveningness), 16, 40; delay in, 136; poor sleep and, 145; puberty and, 201
 phase shift as source of stress, 241
 physical growth, 27; epiphyseal plates, 30, 51; "growth spurt," 28, 29f, 30, 236; melatonin, 14; of *Octodon degus*, 44f; retardation of with zinc deprivation, 55–6, 58f; of rhesus monkeys, 51–4, 56
 pillow, 73, 105–6
 pineal gland, 14, 34, 35f; role in regulation of reproductive function, 42; tumors of, 34
 pituitary, 35f; and GnRH, 30; gonadotropins, 28, 33; LH and FSH, 31
 pituitary-gonadal function, 27
 placebo, 257; in comparison to scopolamine, 263
 Polish students, 202
 poor sleepers: characteristics of, 242; Italian students, 137–8, 145
 positive affect, sense of self-worth and, 274
 posttraumatic stress disorder (PTSD), 238–40
 postural balance and sleep deprivation, 281
 power plant study, 165–8
 precocious puberty, 34
 predator tales, 81
 prefrontal cortex (PFC) in adolescent development, 269, 271, 278
 presleep routine, 215

prior wakefulness and homeostatic process, 11
 production of requested behavior, 276–7
 progesterone, 32
 prostaglandins, 32
 protection: dogs and, 80; dwellings as, 76–7; fire as, 74–6; from large predators, 81; nocturnal security and evolutionary ecology of sleep, 103; from spiritual predators, 81, 91; of young, 95; Western vs. non-Western, 107
 Providence, 200
 psychopathology: academic failure as a risk for, 244; consequence of depression, 254; development from negative cognition, 282; sleep and, 238; vulnerability to, 272
 psychosocial factors and adolescent sleep, 201, 246
 pubertal maturation, 28, 29f, 269, 270; effects of zinc deprivation as in rhesus monkeys, 56–7; homeostatic process and, 13; influence on central nervous system, 32–3; influence of somatic development, 30; of rhesus monkeys, 51–4; secular trend, 36; sleep need and, 200; sleep phase delay, 118; sleep propensity and, 149
 puberty, 27, 134, 271; effects of melatonin on, 14, 34, 35f, 36; effects on sleep-wake behavior, 36–7, 201; emotional arousal at, 274; gender (sex) differences, 2; onset of, 32–6, 42, 236; onset of in *Octodon degus*, 47; sleep and circadian changes at, 280; as a trigger of stress, 243
 punishment, 277
 quality scale, 223–34
 race, 223, 229t
 raiding, 81
 Ramadan, delayed sleep in, 88
 rats: GnRH in in vitro hypothalamic explants, 33; melatonin receptors in brain and anterior pituitary, 36; NMDA stimulation and puberty in, 34; onset of puberty, 32
 reaction time, changes in adolescence, 54
 recovery sleep, rebound sleep: homeostatic process and, 13; of shift workers, 161
 regular sleep patterns, 214,
 relationship formation, 20; maintenance at night in !Kung and, 85
 REM sleep: activity and depression, 256; acute and chronic stress and, 242; arousability influence on evolutionary

- ecology of sleep and, 104; circadian timing, 13–14; early transition to, 19; heritability of, 258; increased in depression, 254; on MSLT, 18, 19; regulation and depression vulnerability, 265; time in relatives of depressed, 260
- REM sleep density: in depressed adolescents, 255t; disease to remission, 256; effects of scopolamine in adolescents at risk for depression, 263–4; increased in depression, 254; in relatives of depressed, 261
- REM sleep latency: adolescent development and, 12; borderline personality, 261; cholinergic sensitivity and, 261; in depressed adolescents, 255t; reduced in depression, 254, 264; reduction as a marker of vulnerability to depression, 256, 260; stress response and, 242
- reproductive competence, 27–8; of rhesus monkeys, 51–2
- reproductive physiology, 271
- restless sleep, 121
- reward, 277
- rhesus monkeys: description of model for adolescence, 51–4; nocturnal melatonin, 35
- Rhode Island: students, 149; survey, 208, 222
- rise time (*see also* wake-up time; waking up): early start time and, 202; grades and, 207; of Italian students, 135t; later on weekend, 142, 220; reason for, 6–8; school transitions study, 17
- risk: arising from teenage sleep deprivation, 173; attribution of for sleep- or alcohol-related crashes, 153–4, 157; for fall asleep crashes, 148; for sleeping pill use, 146
- risk taking, 206; with after school “self-care,” 10
- rites of passage, 71, 89; adolescents as a target of, 89–90, 97; initiation cycles of sub-Saharan Africa age-set societies, 89; initiation ritual and sleep deprivation, 89; spirit quests in North American peoples, 89; wedding in Gabra, 89
- ritual, 87–8; in adolescents, 97; Balinese nocturnal rituals, 88; circadian phase reversal in Ramadan, 88; communicative dreaming (waking visions), 88; dissociative states, 88; in Gebusi sleep life history, 99; influence of sleep, 87; initiation, 79; !Kung trance dance, 87; séances and state regulation in Gebusi, 101; use of nighttime for, 71, 79, 81
- rodents: difficulty as model for puberty, 42; seasonal breeding in, 42; and sleep environment, 74
- romantic experiences: effects on attentional processes, 274; literary examples of, 272–4; obsessional nature of, 274
- roosters, 80
- Rousseau, Henri, and *Sleeping Gypsy*, 71
- rumination: at bedtime in depressed adolescents, 280; in poor sleepers, 242
- safety, *see* protection
- São Paulo students’ sleep patterns, 118
- SAT, time of administration, 174
- schedule regularity, 221
- school administrators, 172, 212
- school night (week night) vs. weekend: entrainment of Western sleep schedules, 107; of Italian students, 136; sleep schedule discrepancy, 5, 118, 122–3, 128, 200; total sleep time, 222–34
- school performance, achievement, 132; associated variables in Italian students, 140, 143; employment and, 159, 203; grades, 2, 10, 174; school start time and, 141, 196–7, 213; sleep disorders and, 207; sleep patterns and, 207, 232f; underachievement as a consequence of depression, 254; vulnerable system, 19
- school start time, xi, 3, 10, 17, 19; adjustment to early, 19; African American students and, 196; athletics, 175–6; bus transportation, 175; comparison to early work times, 168–9; community education and, 176, 178; constraint on adolescent sleep patterns, 202–3; contractual agreements and, 180; daylight/darkness concerns and, 176; daytime sleepiness, 221; delay as a countermeasure, 211, 213; early rise time and, 202; Edina case study, 187–94; elementary schools, 182–3; employment and, 177, 181–2; extracurricular activities and, 175–7; grades, 185f, 196–7; impact on middle school students, 177–8; Italian students and, 141, 143–4; junior high school, 182–3; juvenile crime and, 182; lunch time and, 179; Minneapolis experience overview, 196; parent survey, 185–6; school-age childcare and, 178; sleep regulation and, 280; society’s reinforcement of, 199; stakeholders, 174–86, 194; student survey, 184–5; study of, 172–7; teacher survey, 183–4

scopolamine as a probe in high-risk depression, 262, 263t
 screaming, 120–1
 seasonal reproduction, 42; of rhesus monkeys, 53f, 57
 secondary sexual characteristics, 27–8, 29f, 236; relation to stress, 243; rhesus monkeys, 51; Tanner stages, 16
 secular trend, puberty onset, 36
 self-esteem and academic failure, 244
 self-regulation of behavior, 271, 276, 277
 sensitive periods, *see* critical periods of development
 separation: disrupted sleep in infants and young children, 245; maternal and sleep response, 239; from parents, 241; from siblings, 244; sleep delay and, 250
 serotonin, 32
 settlement pattern, 90
 sex differences: in Balinese nocturnal ritual, 88; depressed mood, 228, 229t; division of labor, 83; in driving while sleepy, 155–6; in employment, 204; in event-related potentials (ERP), 55; in Gabra sleep life history example, 98; in Gebusi sleep life history example, 98–9; gender inequality, 77; grades, 186f, 228, 229t; in sleep habits of Italian students, 134–6, 142–3; sleep quality, 228, 229t; in sleeping arrangements, 76, 78; in sleeping arrangements for adolescents, 92, 97; in use of sleep promoting substances by Italian students, 138–9, 145
 sex steroids, 27–8, 41, 47–8; actions in central nervous system, 33; brain receptors, 27, 36; influence on opioid action, 32; in monkeys, 52; prenatal exposure, 27; puberty and, 31, 33–4; sleep-related secretion of, 31
 sexual arousal and sexuality, 241, 243
 sexual development, *see* pubertal maturation; puberty
 sexual mores, 94–5
 sheep: as an animal model of puberty, 42; and sleep in Gabra, 80
 shift workers, sleep and sleep problems of, 160, 161f
 short versus long sleepers, 124
 siblings: cosleeping with, 250; death of, 244; relations and sleep patterns, 244
 Silman hypothesis, 36
 sleep apnea, 207, 260
 sleep architecture, *see* sleep stages, sleep cycle
 sleep–arousal regulation, 270, 280, 282
 sleep complaints, difficulties, disturbances, 119–21, 133–4; relationship to sleep patterns, 124–5, 128; schematic

diagram of relation to sleep patterns, 127; sex differences in Italian students, 137t
 sleep continuity: heritability of, 258; in relatives of depressed, 260; risk for depression, 265
 sleep cycle, 104
 sleep debt, 211, 249; extended work hours and, x, 165–7; substance use and, 215; work related, 169
 sleep disorder as a stressor, 241
 sleep disruption, sleep disturbances: by cosleeping, 77–8; depression and, 254–5, 259–60, 264–5; from depression cognitive ruminations, 280; by domesticated animals, 80; effects of scopolamine in adolescents at high risk for depression, 263; by fire, 75; internalizing characteristics and, 242
 sleep efficiency: in borderline personality disorder, 261; effects of scopolamine on, 264; increase by schedule regularity, 221; reduced in depression, 254
 sleep extension on weekends, 128, 242
 “sleep gates,” 14
 sleep hygiene treatment, 249
 sleep lag, 174
 sleep latency: in borderline personality disorder, 261; extended work hours and, 166; of Italian students, 136; of shift workers, 160
 sleep length, 120, 224–34; adolescent development and, 12, 40, 126, 141, 200; attention problems at school and, 140–1, 143; circadian timing system and, 13; depression and, 226, 227t, 255t, 259; effects of reduced, 207, 220; employment and, 9–10, 159, 205–6, 210f; extended work hours and, 166, 166f, 168; grades and, 207, 220; in high school students, 208; increase with work delay, 163, 164f; of Italian students, 134–6; longer on weekend, 220; of São Paulo students, 122–3; school start time and, 202; shift work and, 160–1; short vs. long sleepers, 124, 208–9
 sleep loss, 9, 16, 70; associated with ritual, 89, 100; automobile crash risk and, 148; consequences of, 173, 281; from distressing cognitive ruminations, 280; environmental exposures and, 169; extended work hours and, 165, 168; homeostatic process and, 12–13; immune system, 20; impact on cognitive-emotional integration, 269; partial sleep deprivation, 128; REM sleep and aggression, 20; shiftwork and, 160

 - sleeping in exposed conditions, 91; in monkeys, 52; poor vs. rich in Swat Pathan, 91; pursuit of, 272; sleep ecology in Western and non-Western societies and, 110–11; women sleeping with infants and children, 91
- sociality: in Gebusi to mitigate deep sleep, 91; in somnolence, 87; use of nighttime for, 71, 79, 103, 108
- socializing, 132; escape from by sleeping, 85; festivities and dances, 86; in Italian students, 136, 144; reason for bedtime, 6, 8, 243–4; visiting and traveling, 86–7
- Society for Research on Child Development (SRCD), 199
- socioeconomic status: in Edina, 194; sleep patterns in Italian students and, 139–40, 144
- soul loss (*kesambet*), *see* fear sleep
- spiritual predators, 81
- stage 1 sleep, parent-child correlation, 258
- stages 3 and 4 NREM sleep, *see* slow wave sleep
- stakeholder reports for school start time, 174–86
- Standard Shiftwork Inventory (SSI), 162, 164
- state regulation, 70; evolutionary basis, 102; sleep ecology and, 109–10; socialization of, 96, 99–102
- staying up late and autonomy, 241
- steel mill study, 162–5
- Steinberg, Laurence, 10, 21
- stimulants, accidents and, 141
- storm and stress, 237
- stress: arousal in response to sleep deprivation and, 281; biphasic response to, 239; definition and model, 237–8; employment and psychological, 159; psychosocial and pathway to depression, 264; related to sleep patterns, 208; sexual maturation and, 243; sleep model and, 240; sleep-wake response model and, 238–9; trauma and, 245–6
- stress-diathesis model of early depression, 278
- stressful life events and sleep, 242
- stressors, 236, 243, 246, 260, 280
- subcortical circuits activated at puberty, 271
- substance abuse, 2, 132; associated with after school self care, 10; depression and, 254–5; employment and, 159, 215
- substance use, 133–4, 143, 203, 208, 229; and cultural differences, 145; and sleep problems, 140
- sudden infant death syndrome (SIDS), 101; risk for, 69
- sudden unexplained nocturnal death syndrome (SUNDS), 101
- suicide as a consequence of depression, 255
- suicidal ideation and sleep problems, 209
- summer sleep camp, ix, xiii, xv
- somnambulism, 120–1
- suprachiasmatic nucleus, sex steroid receptors, 36, 41
- survey(s), 16, 20, 159; driving risk, 149; of parents for school start time, 185–6; sleep habits, 5–10, 119, 133, 184–5, 199–214, 220–30, 241; sleep inventory, 120
- Swat Pathan, 72; air quality in dwelling sealed for insulation, 75–6; bed and bed-sharing, 78; bedding, beds, 73; dogs and sleep disturbance, 80; influence of social class on sleeping arrangements, 91; midday naps and heat stress, 84–5; mud-stone dwelling, 76; napping, 93; sex differences and sleeping conditions, 92; sleep patterns in cultivation season, 83, 93
- Swiss students, 142
- synaptic density, 54
- synaptic foundation, effects of sex steroids, 33
- synaptic pruning: in adolescence, 54; overproduction and subsequent, 275
- Tahitians, sexual practices and sleeping arrangements, 94
- Taipei, Taiwan, students' sleep, 8, 142, 144
- Tanner stages, 16, 17, 28, 29f, 31, 119
- tardiness: employment and, 203; school start time and, 192
- teachers: ratings, 221; school start time and, 172, 180, 183
- television: reason for bedtime, 6, 8, 136; sleep patterns and, 142
- temporal isolation, 13
- testosterone, 41; feedback on GnRH pulse generator, 31–2; receptors in CNS, 33; spermatogenesis in the testis, 31
- thermal load, 84–5
- threat-related arousal activation, 272, 278

0521642914 - Adolescent Sleep Patterns: Biological, Social, and Psychological Influences

Edited by Mary A. Carskadon

Index

[More information](#)*Index*

297

- time of day of instruction, 174
time-use studies, 1
tobacco: academic performance and, 140;
accidents and, 141; work and, 206
traditional societies, 70
traumatic events (*see also* posttraumatic
stress disorder): 236, 241, 245–6;
adaptive sleep response, 246; child
abuse, 245; and increased sleep, 245
truancy, 20
two-process model, xiv
- unintentional sleep, after sleep loss, 13
- vigilance: domesticated animals and,
80–1; effects of naps on, 214; influence
on evolutionary ecology of human
sleep, 103; need for nocturnal, 72, 103;
against predators, 81
violence, REM sleep loss and, 20
visitors and hospitality, 86–7
vitamins and minerals, in adolescent
diet, 51
vulnerability for depression, 254, 257, 260,
278–80; affect regulation, 269; markers
of, 255, 260; negative affective bias, 279;
pharmacologic probes, 261, 262; sleep
deprivation, 280
vulnerable period, sensitive periods and
cognitive-emotional development, 275
vulnerable systems, 19–20
- wake-up time(s) (*see also* rise time):
adolescent maturation and, 199; early in
Gabra herders, 83; early morning start
delay and, 164; fluid, 71; in Italian
students, 134–6; phase delay of, 129; of
prepubescent children, 209; in São Paulo
students, 122–3, 126; short vs. long
sleepers, 124; sleep complaints and, 128
waking up, 6, 7f; adolescent patterns of,
200; difficulty with, 118, 209; readiness,
120, 124; spontaneous in morning types,
201; trouble with and driving accident
risk, 155
warfare, 81
water stress, 84–5
weekday-weekend difference (*see also*
school night vs. weekend): in Brazilian
students, 126, 128t; in college students,
126; in Italian students, 136, 137t, 141–2;
in São Paulo students, 122–3; sleep
patterns, 201, 220, 242
weekend bedtime delay, 208–9, 222–34
weekend sleep, 174, 208–9; delay of, 201
Western sleep practices, 104–9
wheel running activity, 43, 45f
witches, 81, 90; witchcraft during sleep, 91
wolves, 81
Work Experience Career Exploration
Program (WECEP), 181
work start time, 160–5, 168; sleep loss and,
160, 169; study of delay of, 161–5
working memory and motivation, 272, 277
worry, sleep patterns and, 118
- Youth Enhancement Services, xiv
- Zaire: Efe, 72; Lese, 72
"zero hour," 10
zinc: deprivation, 55, 56; effects on activity
offset, 63–4
