<i>Preface</i>	ix
1 Physics foundations	1
1.1 Range of application for radiation detectors	1
1.1.1 <i>Natural sources of radiation</i>	1
1.1.2 <i>Units for radiation measurements</i>	2
1.1.3 <i>Artificial radioactivity</i>	4
1.1.4 <i>Particle accelerators</i>	6
1.2 Interactions of particles and γ -radiation with matter	9
1.2.1 <i>Detection of charged particles</i>	9
1.2.2 <i>Detection of γ-rays</i>	19
1.2.3 <i>Bremsstrahlung of electrons</i>	23
1.3 Electrons and ions in gases	25
1.3.1 <i>Mobility of ions</i>	25
1.3.2 <i>Diffusion of ions in a field-free gas</i>	26
1.3.3 <i>Recombination and electron capture</i>	27
1.3.4 <i>Drift of electrons in electric fields</i>	29
1.3.5 <i>Drift of electrons in electric and magnetic fields</i>	32
1.3.6 <i>Diffusion of electrons in electric and magnetic fields</i>	35
1.4 Quantities characterizing detectors	39
 2 Measurement of ionization	 46
2.1 Ionization chambers	46
2.2 Proportional counters	50
2.3 Geiger–Mueller counters	55
2.4 Measurement of ionization in liquids	57
2.5 Semiconductor detectors	61
 3 Measurement of position	 69
3.1 Multiwire proportional chamber	69
3.2 Planar drift chambers	74
3.3 Cylindrical drift chambers	78
3.4 The Jet drift chamber	81

vi	<i>Contents</i>	
3.5	Time projection chamber (TPC)	84
3.6	Simulation of particle tracks by ultraviolet lasers	89
3.7	Microstrip gas chambers (MSGC)	90
3.8	Bubble chambers	93
3.9	Streamer chambers	97
3.10	Flash chambers	100
3.11	Spark chambers	101
3.12	Nuclear emulsions	103
3.13	Silicon strip detectors and CCDs	104
3.14	Scintillating fibres	108
3.15	Comparison of position detectors	112
4	Measurement of time	113
4.1	Photomultiplier tubes	113
4.2	Scintillators	119
4.3	Collection of scintillation light	124
4.4	Planar spark counters	129
5	Particle identification	132
5.1	Neutron counters	132
5.2	Time-of-flight measurement	137
5.3	Cherenkov counters	137
5.4	Transition radiation detectors	150
5.5	Multiple ionization measurement	154
5.6	Comparison of identification methods for charged particles	164
6	Measurement of energy	165
6.1	Electron–photon shower counters	165
6.2	Hadron calorimeters	174
6.3	Calibration and monitoring of calorimeters	185
7	Measurement of momentum	188
7.1	Magnet shapes for fixed target experiments	188
7.2	Magnet shapes for storage ring experiments	192
7.3	Central tracking detectors for storage ring experiments	194
8	Applications of detector systems	197
8.1	Medical applications	198
8.2	Geophysical applications	200
8.3	Applications in space sciences	202
8.4	A detector for ion–atom collisions	205
8.5	A detector for heavy ion reactions	207
8.6	Detector systems for high-energy experiments	210
8.6.1	<i>A fixed target detector for CP-violating B decays</i>	210
8.6.2	<i>A detector for high-energy neutrinos</i>	211
8.6.3	<i>Detectors for B decays at an asymmetric electron–positron collider (B factory)</i>	214
8.6.4	<i>A detector for proton–antiproton collisions at high energy</i>	214

Cambridge University Press

0521648548 - Detectors for Particle Radiation - Konrad Kleinknecht

Table of Contents

[More information](#)

<i>Contents</i>	vii
8.6.5 <i>The four detectors at the electron–positron collider LEP</i>	218
8.6.6 <i>The two HERA detectors</i>	222
8.6.7 <i>Detectors at the future Large Hadron Collider (LHC)</i>	225
8.7 Proton decay detectors	227
8.8 Solar neutrino detectors	230
<i>References</i>	234
<i>Index</i>	241
