<i>Preface to the revised edition</i>	page ix
<i>Preface</i>	xiii
Introduction	1
Chapter 1 From classical to quantum mechanics	8
1.1 The ideal of the detached observer	8
1.2 States and properties in classical mechanics	13
1.3 States, properties, and probabilities in quantum mechanics	22
1.4 Schrödinger's cat and quantum jumps	32
Chapter 2 Bell's 'no go' theorem	40
2.1 The Einstein–Podolsky–Rosen incompleteness argument	40
2.2 The Greenberger–Horne–Zeilinger counter-argument	48
2.3 Stochastic hidden variables	52
2.4 Deterministic hidden variables	58
2.5 Locality and separability	64
Chapter 3 The Kochen and Specker 'no go' theorem	71
3.1 The 'colouring' problem	71
3.2 Schütte's tautology	82
3.3 Four-dimensional uncolourable configurations	95
3.4 Proofs and constructions	102
Chapter 4 The problem of interpretation	115
4.1 The problem defined	115
4.2 A uniqueness theorem for 'no collapse' interpretations	126
Chapter 5 Quantum mechanics without observers: I	131
5.1 Avoiding the measurement problem	131
5.2 The evolution of property states	133
5.3 Non-ideal measurements	141
5.4 Environmental 'monitoring'	150

viii	<i>Contents</i>	
	5.5 Proof of the tridecompositional theorem	159
	Chapter 6 Quantum mechanics without observers: II	163
	6.1 Bohmian mechanics	163
	6.2 The modal interpretation	173
	6.3 Proof of the modal recovery theorem	181
	Chapter 7 Orthodoxy	184
	7.1 The Copenhagen interpretation	184
	7.2 Some formal constructions	199
	Chapter 8 The new orthodoxy	207
	8.1 Decoherence	207
	8.2 Many worlds	218
	8.3 Consistent histories	227
	Coda	232
	Appendix Some mathematical machinery	239
	A.1 Hilbert space	239
	A.2 Quantum states	247
	A.3 The Dirac notation	254
	A.4 Spin	258
	A.5 Composite systems	263
	<i>Bibliography</i>	268
	<i>Index</i>	286
