INDEX

Abbott, Leonard, 41
Abelson, Philip, 89, 136
abrasives, 142–3, 163–4
African diamond production, 170
alcohol phase transition, 229
Alundum (Norton Company), 81–3
American Chemical Society, 138
American Mineralogist, 149
Angus, John C., 203–5
Anthony, Thomas R., 205
Appleton, Victor, 30–1
ASEA, 61–77, 148, 183
atmosphere (pressure unit), 47
Australian diamond production, 170
beryllium, 216
Birch, Francis
  high-pressure experiments, 89–90
  visit to Norton, 86–7
Birdsboro Company, 103
bismuth, 223
Blainy, Alan, 171
boron nitride, 148–9
Bovenkerk, Harold
  attempts to duplicate Strong’s synthesis, 125–6
  Bridgman visit to GE, 139
  education, 104
  GE work, 104, 113, 125–6, 132, 134–5, 141–2, 152
  on Chen-Min Sung, 185
  on De Beers, 171, 179–80
  photographs, 135, 140, 168
  transfer to Detroit, 134–5, 141–2
Boyd, Francis R. (Joe)
  boydite, 91
  diamond synthesis, 154–7
  on George Kennedy, 173–6
  photographs, 87, 92, 156
  visit to Norton, 86–9
Bragg, Lawrence, 33
Bragg, William, 33
Braman, Dennis R., 192
Brazilian diamond production, 8
Bridgman, Percy W., 39–60
  advice to A. W. Lawson, 215
  childhood, 39–41

237
Bridgman, Percy W. (cont.)
collected papers, 58
diamond synthesis, 56–8, 78, 80, 96,
138–40
Nobel Prize, 58
on the diamond-anvil cell, 229
opposed-anvil device, 222
personality, 43
photograph, 42, 139, 140
The Physics of High Pressure, 52
pressure calibration, 47–9
pressure records, 49, 55
pressure research, 39–40, 43, 49–58, 78,
101–2
pressure seal, 43–7
suicide, 58–9
Brigham Young University, 136
Bundy, Francis
De Beers trial, 179
delta carbon, 192–3
education, 99–100
flying saucer design, 109–10
General Electric work, 98–105, 107,
109–10, 112–17, 119–20, 132, 133, 139,
152
photographs, 106, 119
superbelt, 145–6
Bunting, Elmer, 221
Canyon Diablo Meteor Crater, 21, 91, 192,
195
Carboloy, see tungsten carbide
Carboloy Division (General Electric), 57,
96, 114–5, 140–2
carbon, 1, 10, 146–7, 161–2
Carborundum Company, 149
Carlisle, David B., 192
Carnegie Institution of Washington, 85–6,
116, 154–6
Case Western Reserve, 202–4
ceramics, 8–3
Chambers, Dudley, 101
Chao, Edward, 90–1
Charles VII, King of France, 7
Chase, Charles, 55
Chemical News, 25
Chinese diamond synthesis, 184
close packing, 193–5
Coes, Loring, Jr., 78–94
coeite, 84–5, 90–1, 192
Comstock, George, 86
cone apparatus, 116–17, 119–21, 123–5
Connell, William, 52
Cordiner, Ralph, 126
corundum, 81–2, 120
Cosmos Club (Washington, DC), 175–6
Crookes, William, 25–8
crystal energy, 32–3
crystal structure
diamond, 33–4
graphite, 33–4
crystallography, 213–15
Crystallume, 205
cubic-anvil press, 185–8
Cullinan diamond, 2–3
Cullinan, Thomas, 3
Custers, J. F. H., 170–1
cvd, see chemical vapor deposition
Davy, Humphry, 20
De Beers
Adamant Research Laboratory, 170–2
belt apparatus, 171
control of diamond market, 132–3, 144
diamond production, 170–2, 183
diamond synthesis, 75–7
legal battles, 172, 176–81
patents, 151–2
piston-cylinder device, 171
response to GE diamonds, 143
De Carli, Paul S., 195
Index

239

Derjaguin, Boris V., 202–5, 229–30
Despretz, Charles, 16
De Vries, Robert, 205
diamond abrasives, 162–8
blue, 160
composition, 9–10, 19
conditions for synthesis, 145
confirmation of synthesis, 131–2
crystal forms, 141–2
crystal structure, 33–4
dispersion, 6
facets, 6–8
famous stones, 2–3
fine-grained, 162–3
formed by meteor impact, 192, 195
isotopically pure, 161–2
jewelry, 7–8
large synthetic crystals, 159–61, 184
lonsdaleite, 193, 196
nitrogen impurities, 220
origins, 1, 9, 11–14
phase diagram, 35–6
prices, 133, 144
production, 7–8, 11, 13
properties, 2–3, 5–6, 9–10
semiconductor, 206–8
smugglers, 219
stability, 54–6
synthesis patents, 172, 177–9
talismans, 2
tests of quantum theory, 32–3
transparency, 215–14
type I and II, 220
uses, 2, 163, 205–10, 213–14
diamond-anvil cell, 222–33
gasket, 226–7
invention, 222–5
lever arm, 224–9
patent, 232
dispersion, 6
Donahoe, Frank, 231
drilled-diamond cell, 216–21
Du Pont Mypolex, 195–7
Dunbar Laboratory, Harvard University, 51–2, 57
Dunbar, Atherton K., 51–2
Dyer, Henry B., 170–2, 189
eclogite, 83–4
Edison, Thomas, 96–7, 105
Einstein, Albert, 32–3
electric arc furnace, 21–3, 25
electromagnetic radiation, 213–14
England, Joe, 155–7
Eureka diamond, 11
Eversole, W. G., 200–2
explosions
belt apparatus, 158–9
Crookes experiments, 28
Hannay experiments, 17–19
high-pressure, 51–2, 157–9, 181
used to make diamond, 190–7
facets, 6–8
Fedoseev, Dimitri V., 202–3
Fedyakin, N. N., 229–30
fluorine, 19–21
flying saucer device, 109–10
Ford, Henry, 105
Fuller, R. Buckminster, 163
Gannal, J. N., 16
Garis, Howard, 31
garnet, 83, 86
gasket
design for belt, 118
diamond-anvil cell, 226–8
pyrophyllite, 103, 117–18
wonderstone, 103, 187
