analytic continuation 18, 27, 67, 92, 140, 187, 233
asymptotic freedom 1, 3
axial gauge 98, 104, 148
axion emission 78, 192, 212

bag constant 4
bare (or naïve) perturbation theory 3, 150, 172, 193, 203, 225, 230
blackbody radiation 5, 30, 39, 98
Bloch Nordsieck theorem 222
Boltzmann equation 134, 182, 203
Bose–Einstein condensation 47
Bose–Einstein distribution 23, 171
boundary conditions (bosons) 21, 50, 101
boundary conditions (fermions) 88, 112

canonical anticommutation relations 90, 143
canonical commutation relations 26, 58, 131
chemical potential 5, 7, 45, 95, 133, 167
chiral symmetry (or invariance) 2, 8, 141, 144
chiral transition 8
collective excitations (or modes) 114, 127, 141, 143
collinear (or mass) singularity 222, 226, 235
confinement 4
conserved current 44, 126, 134
contour integral 46, 96
Coulomb gauge 104, 147, 169, 223, 240
covariant (or Lorentz) gauge 104, 118, 240
critical temperature 3
cutting rules 72

damping rate 114, 117, 175, 235
Debye (or electric) mass 10, 126, 179
deconfinement transition 5, 8
detailed balance 25, 68, 83, 85
dielectric constant 137
dilepton production 109
dilepton production (hard) 223
dilepton production (soft) 172
Dirac equation 90
Dirac matrices 90
dispersion law (or relation) 114, 117, 127, 142, 213

effective action 185
effective expansion 168, 199
effective Lagrangian 156, 168
effective mass 191
effective (or dressed) propagators and vertices 169
electron self-energy 113, 138
elementary excitation: *see* collective excitations
energy loss 82, 192
Euclidean action 20, 35
Euclidean space 18, 36, 92, 99, 123, 240

Faddeev–Popov (F–P) ghost 97, 102
Fermi–Dirac distribution 93, 171
Feynman diagram (or graph) 40, 44

More information

Feynman gauge 102, 107
Feynman rules 44, 54, 240, 242
free energy 30, 38, 42
frequency sum 29, 66, 93, 96, 243

gauge field 97
gauge (-fixing) independence 106, 126, 140, 144, 156, 167, 169, 175, 230
gauge (-fixing) parameter 101, 230
gauge invariance 97, 120, 144
Gauss's law 98
generating functional 21, 23, 36, 48, 52
global symmetry 8
gluon 1
gluon propagator 224, 228
gluon self-energy (or polarization tensor) 144, 170
grand potential 5, 47
Grassmann algebra 87
Green's function 23, 25, 47

hard momentum 120
hard thermal loop (HTL) 119, 150, 161, 167, 180
heavy ion collisions 11, 172
hydrodynamics 13, 16

ideal gas 3
imaginary-time 19
induced current 126, 184
infrared divergence (or singularity) 3, 63, 65, 195, 222, 226
interaction rate 82, 192, 235

kinetic theory 134, 180
Kinoshita–Lee–Nauenberg (KLN) theorem 222, 226
Kubo formula 126, 148
Kubo–Martin–Schwinger (KMS) formula 24, 91

Landau damping 68, 124, 137, 161
lattice QCD 2, 7
lepton pair (or dilepton) production 109
lepton pair production (hard) 223
lepton pair production (soft) 172
Linde's problem 231
linear response 115
longitudinal gluon 203, 228
longitudinal photon 123, 128, 191, 212

magnetic mass 149, 180, 229
Matsubara frequency 27, 92
Minkowksi space 18, 35, 92, 102, 123, 239

neutrino emission 212, 217

partition function 21, 29, 32, 38, 88, 95, 98, 108
path integral 19, 21, 50, 53, 89
perturbation theory (or perturbative expansion) 2, 35, 44, 63, 65, 168
phase transition 4, 6
photon production 109
photon production (hard) 199
photon production (soft) 232
photon propagator 118, 129
photon self-energy (or polarization tensor) 113, 118, 133, 134, 213
plasma frequency 127
plasmino 141
plasmon 212
Polyakov loop 8
propagator 27, 38, 48, 49
propagator (cut) 74, 83, 92, 195, 224
propagator (Matsubara, or imaginary-time) 21, 27, 38, 45, 66, 92, 107
propagator (real-time) 25, 28, 49, 52
propagator (retarded) 28, 117, 123

QED plasma 3, 118, 192
quantum chromodynamics (QCD) 1
quantum electrodynamics (QED) 98
quark 1
quark–gluon (or QCD) plasma 3, 144, 158
quasi-particle: *see* collective excitations

real-time formalism 47, 107
red giant star 212

relaxation time 84, 198, 209, 211
renormalization 42, 58, 144
renormalization group 2, 179
resummed perturbation theory: *see* effective expansion
ring diagrams 64

Schwinger–Dyson equations 148
screening (static) 126
screening (dynamical) 127, 192
self-energy 41, 56, 75
self-energy: imaginary-time 57, 66
self-energy: real-time 55, 57, 69
soft momentum 63, 120, 170
spectral function 25, 27, 49, 91
static modes 65, 179, 223
string tension 10
subtraction point 179
sum rule 26, 58, 91, 129, 142
supernova 212

thermal mass 62, 122, 133, 140, 146, 148
time-ordered (or T-) product 22
time-ordered propagator 28
transport cross-section 202, 207
transverse gluon 229
transverse photon 123, 128, 191, 208, 212

vertex 70, 150, 154
viscosity 205
Vlasov equation 135, 182

Ward identity 122, 153, 155, 164
white dwarf star 212
Wick's theorem 37, 246
