<i>Preface to the first edition</i>	<i>page</i> ix
<i>Preface to the second edition</i>	xii
<b>Introduction to the first edition</b>	<b>1</b>
<b>1 Background of thermodynamics of solids</b>	<b>4</b>
1.1 Extensive and intensive conjugate quantities	4
1.2 Thermodynamic potentials	6
1.3 Maxwell's relations. Stiffnesses and compliances	8
<b>2 Elastic moduli</b>	<b>11</b>
2.1 Background of linear elasticity	11
2.2 Elastic constants and moduli	13
2.3 Thermoelastic coupling	20
2.3.1 Generalities	20
2.3.2 Isothermal and adiabatic moduli	20
2.3.3 Thermal pressure	25
<b>3 Lattice vibrations</b>	<b>27</b>
3.1 Generalities	27
3.2 Vibrations of a monatomic lattice	27
3.2.1 Dispersion curve of an infinite lattice	27
3.2.2 Density of states of a finite lattice	33
3.3 Debye's approximation	36
3.3.1 Debye's frequency	36
3.3.2 Vibrational energy and Debye temperature	38
3.3.3 Specific heat	39

vi	<i>Contents</i>	
	3.3.4 Validity of Debye's approximation	41
	3.4 Mie–Grüneisen equation of state	44
	3.5 The Grüneisen parameters	46
	3.6 Harmonicity, anharmonicity and quasi-harmonicity	57
	3.6.1 Generalities	57
	3.6.2 Thermal expansion	58
<b>4</b>	<b>Equations of state</b>	<b>63</b>
	4.1 Generalities	63
	4.2 Murnaghan's integrated linear equation of state	64
	4.3 Birch–Murnaghan equation of state	66
	4.3.1 Finite strain	66
	4.3.2 Second-order Birch–Murnaghan equation of state	70
	4.3.3 Third-order Birch–Murnaghan equation of state	72
	4.4 A logarithmic equation of state	74
	4.4.1 The Hencky finite strain	74
	4.4.2 The logarithmic EOS	76
	4.5 Equations of state derived from interatomic potentials	77
	4.5.1 EOS derived from the Mie potential	77
	4.5.2 The Vinet equation of state	78
	4.6 Birch's law and velocity–density systematics	79
	4.6.1 Generalities	79
	4.6.2 Bulk-velocity–density systematics	82
	4.7 Thermal equations of state	90
	4.8 Shock-wave equations of state	94
	4.8.1 Generalities	94
	4.8.2 The Rankine–Hugoniot equations	96
	4.8.3 Reduction of the Hugoniot data to isothermal equation of state	100
	4.9 First principles equations of state	102
	4.9.1 Thomas–Fermi equation of state	102
	4.9.2 <i>Ab-initio</i> quantum mechanical equations of state	107
<b>5</b>	<b>Melting</b>	<b>110</b>
	5.1 Generalities	110
	5.2 Thermodynamics of melting	115
	5.2.1 Clausius–Clapeyron relation	115
	5.2.2 Volume and entropy of melting	115
	5.2.3 Metastable melting	118

Cambridge University Press

052166313X - Introduction to the Physics of the Earth's Interior, Second Edition

Jean-Paul Poirier

Table of Contents

[More information](#)

<i>Contents</i>		vii
5.3	Semi-empirical melting laws	120
5.3.1	Simon equation	120
5.3.2	Kraut–Kennedy equation	121
5.4	Theoretical melting models	123
5.4.1	Shear instability models	123
5.4.2	Vibrational instability: Lindemann law	125
5.4.3	Lennard-Jones and Devonshire model	132
5.4.4	Dislocation-mediated melting	139
5.4.5	Summary	143
5.5	Melting of lower-mantle minerals	144
5.5.1	Melting of MgSiO <sub>3</sub> perovskite	145
5.5.2	Melting of MgO and magnesiowüstite	145
5.6	Phase diagram and melting of iron	146
<b>6</b>	<b>Transport properties</b>	<b>156</b>
6.1	Generalities	156
6.2	Mechanisms of diffusion in solids	162
6.3	Viscosity of solids	174
6.4	Diffusion and viscosity in liquid metals	184
6.5	Electrical conduction	189
6.5.1	Generalities on the electronic structure of solids	189
6.5.2	Mechanisms of electrical conduction	194
6.5.3	Electrical conductivity of mantle minerals	203
6.5.4	Electrical conductivity of the fluid core	212
6.6	Thermal conduction	213
<b>7</b>	<b>Earth models</b>	<b>221</b>
7.1	Generalities	221
7.2	Seismological models	223
7.2.1	Density distribution in the Earth	223
7.2.2	The PREM model	227
7.3	Thermal models	230
7.3.1	Sources of heat	230
7.3.2	Heat transfer by convection	231
7.3.3	Convection patterns in the mantle	236
7.3.4	Geotherms	241
7.4	Mineralogical models	244
7.4.1	Phase transitions of the mantle minerals	244
7.4.2	Mantle and core models	259

viii	<i>Contents</i>	
<b>Appendix</b>	PREM model (1s) for the mantle and core	<b>272</b>
	<i>Bibliography</i>	275
	<i>Index</i>	309
