always taker, 201–10
analysis of covariance, 253–60, 267–68, 271–72
average causal effect, *see* average treatment effect
average treatment effect, 35–37, 42–46
  conditional, 42–44, 83–84
  for the treated, 42–44, 47–50, 83–85
  for the untreated, 42–44, 47–50, 83–85

back-door criterion, 69–74, 76–77, 91, 131–32, 169–70
back-door path, 26–28, 69–74, 91, 188, 226–29, 250, 265, 288
  blocking, 26–28, 69–74, 76–77, 131–32, 137, 169–70, 180–83, 265–66
balancing
  definition of balance, 82
  versus adjustment, 81–83
  determinants of treatment, 82, 89, 95, 100n10, 105, 114–16, 153
bias
  baseline, 46–48, 132–35
  differential treatment effect, 46–48, 132–35
  omitted-variable, 73, 91, 129–42
  self-selection, 18–20, 77–79, 111–14, 176–77, 184–86
bound
  analysis of, 172–79, 214–16
  no-assumptions, 173–78, 214–15

causal effect, *see* average treatment effect *and* individual-level treatment effect
causal pathway, 183, 221–30
causal state, 31–33, 53, 77, 159–60
chain of mediation, 64–65
change score, 253–62
collider, 64–73, 180–81, 265–66
complier, 201–14, 221–24
conditioning, 61–74
control group, 5–6, 34–35, 44–47
control state, 31–35
counterfactual, 4–6, 31–35
  conditional expectation, 45–50, 91, 173–78
  philosophy literature, 4, 236, 284–85
covering law, 4, 232–35, 281

data-driven specification search, 83, 164–65
defier, 201–10
directed acyclic graph (DAG), 61–64

error term, 11, 78–81, 89, 131–40
examples
  Catholic school, 18, 36–39, 43, 48–49, 76–77, 110–14, 156–58, 162–65, 179–83, 195, 212
  class size, 249–51
  educational attainment, 14, 42, 194, 240–42
  education on earnings, 15, 55–57, 130–32, 160, 177, 194–95
  felons and election outcomes, 32–33
  manpower training, 19–21, 31, 36, 39, 43, 78–79
  military service, 195–98, 222–23
  National Supported Work (NSW), 20, 271–74
  Operation Ceasefire, 245–50
  political participation, 15–17, 32, 42
  school voucher, 18–19, 43, 182, 191–92, 201–14
experiment
  definition of, 6–8
experimental design, 9

front-door criterion, 182–83, 226–30, 240

generative mechanism, 230–33

ignorability, 40–41, 75–77, 80, 85, 91, 106–08, 116, 141, 169–70, 172
independence
  of potential outcomes from treatment, 40–41, 48, 75, 135
  of instrument, 201–02, 206–08, 214

individual-level treatment effect, 5, 33–38
  heterogeneity of, 36, 134, 142–49, 192, 202–04
instrumental variable (IV), 26–29, 181–82, 187–217
  binary, 187–92, 198, 203
  IV Demonstration 1, 191–92
  IV Demonstration 2, 204–10
  LATE assumptions, 201–02
  Traditional assumptions, 196–97, 214–15
interrupted time series (ITS) design, 244–49

local average treatment effect (LATE), 200–13, 221–23, 282–83
local instrumental variable (LIV), 213–15

Mahalanobis metric, 106, 110, 115
many-valued treatments, 53–57, 120–21, 159–60
marginal treatment effect (MTE), 213–14
matching, 87–122
  as data analysis algorithm, 105–16
  as stratification, 90–97
  as weighting, 98–105, 152–53
  caliper, 108–09, 112–13, 157
  exact, 107, 113
  interval, 108–09, 110, 112–13, 157
  kernel, 109, 110, 112, 113
  Matching Demonstration 1, 92–95
  Matching Demonstration 2, 95–97
  Matching Demonstration 3, 100–05
  Matching Demonstration 4, 110–14, 156–58
  nearest-neighbor, 107–09, 112–13, 116, 118, 158
mechanism, 13, 28–29, 162, 182–84, 219–42
  exhaustive, 28, 226–30
  isolated, 28, 226–30
mechanism schema, 238–39
mechanism sketch, 238–42, 280
monotone instrumental variable (MIV), 215–16
monotone treatment response (MTR), 177–78, 202n19, 216n30
monotone treatment selection (MTS), 177–78, 202n19, 215–16
monotonicity,
  of response to instrument, 201–10

naive estimator, 44–50, 91–94, 130, 153, 173–77
natural experiment, 187, 197–99, 220–22
never taker, 201–10
nonignorable, *see* ignorability
nonmanipulability, 231, 278–80

observable
  determinant of selection, 79–81
  outcome variable, 34–35, 78
observational study, 7, 41
omitted variable bias, *see* bias, omitted variables
ordinary least squares (OLS), *see* regression, ordinary least squares

panel data, 251–74
  Panel Data Demonstration 1, 254–57
partial identification, *see* bounds, analysis of
path, 69
path model, 10–12, 61–63, 240–42
point identification, 67–74, 179–83, 288
policy-relevant treatment effect (PRTE), 214
population, 21–22, 51–53
population average treatment effect (PATE), 21–22, 53
posttest, 78–79, 164, 244, 251–58, 264, 269, 271–74
potential outcome, 5–6, 33–35, 37–38, 53
pretest, 163, 179–81, 251–58, 262–64, 266–69, 271–74
propensity score, 75–76, 98–99
  estimated, 99–104
  logit estimation of, 99–103
  stratum-specific, 98–99, 142–49
  true, 75–76, 98–99

quasi-experiment, 9–10

random-sample surveys, 21–22, 51–53, 90
realism, 284–85
  critical, 235–36
regression
  as a form of matching, 142–58
  bivariate regression, 129–38, 193
  multiple regression, 136–37, 148, 185
  ordinary least squares (OLS), 89–90, 130, 137–38
  Regression Demonstration 1, 124–27
  Regression Demonstration 2, 143–49
  Regression Demonstration 3, 149–51
  Regression Demonstration 4, 153–55
  Regression Demonstration 5, 156–58
regression discontinuity (RD) design, 249–51

sample, 21–23, 44–45, 52–53
sample average treatment effect (SATE), 21–22, 53
selection
