Cracking the Ad Code

Do you need to produce successful creative ideas in advertising? If so, then you need this book. For the first time, the secret of inventing new creative campaigns is unlocked, and specific, practical tools are presented to allow the quick production of creative thoughts in marketing communications.

Along with over 100 advertisement examples and numerous case studies, you also get a systematic analysis of the creation aspect of advertising, together with a taste of the real world of advertising and what makes it work. Marketing professionals in companies will learn to know what they can expect and demand from their agencies, whilst agencies will be able to explain their work to clients in an analytic language that is easy to understand.

This is essential reading for advertising professionals working for agencies and in marketing and communication departments. It is also a useful tool for students of advertising, marketing, communication, and management, from introductory level all the way up to research faculty.

Jacob Goldenberg is an Associate Professor of Marketing in the School of Business Administration at the Hebrew University of Jerusalem. His research focuses on creativity, new product development, diffusion of innovation, social networks, and complexity in market dynamics.

Amnon Levav is Co-founder and Managing Director of Systematic Inventive Thinking (SIT). For the past 14 years he has developed and facilitated innovation programs in more than 25 countries, in a wide range of organizations, among them advertising agencies such as BBDO, Leo Burnett, and McCann-Erickson.

David Mazursky is the Kmart Professor of Marketing in the School of Business Administration, the Hebrew University of Jerusalem. His research focuses on consumer behavior, creativity, product development, innovation, and interdisciplinary research relating to abstract structures in music and the arts.

Sorin Solomon is Professor of Theoretical Physics at the Hebrew University of Jerusalem and Chair of the EU Commission Expert Group on Complexity Science.

Introduction 1

Inventing tools that support advertisers in generating ideas 1
Can creativity be defined and quantified? 2
Creativity: An academic perspective 3
Looking for a method in the creative madness 8
Effectiveness of creative ads 10
A brief outline of the tools 13
Fusion 14
Closed World 15

1. Unification 18

Where do ideas come from? 18
Prisons that set you free 19
The constraint of the medium 20
Paradox: Mixing constraints with daring 20
Definition of advertising media 22
Using the medium 22
Two approaches to using Unification 28
Approach 1: Exploring the medium to serve the message: Getting more out of an existing medium 28
Instructions for use 33
Approach 2: Content creates form: Recruiting a medium in the environment of the message 34
Instructions for use 37
How can we benefit from resources in the environment of the medium? 39
Instructions for use 40
And some for the road 41

## Contents

### 8. Extreme Effort

- What to say when you have nothing to say 137
- Two types of scenes 137
- When to use the tool 140
- Instructions for use 142
- And some for the road 144

### 9. Attribute–Value Mapping

- The three questions 145
- The difference between an attribute and a value 146
- Added value of defining the value – the next step of the process: Beginning to seek new messages 147
- A few examples: Are these advertisements based on attribute or value? 148
- Why don’t people do what they know is right? 149
- The connection between attribute and value 151
- Distinguishing between attribute and value levels 153
- What the AV Mapping offers 155
- How to build your own Attribute–Value map 156
- And some for the road 161

Acknowledgments

Very little of the content of this book would have existed in this form without the huge collaboration of several people and organizations. Historically, the application of the Systematic Inventive Thinking method to advertising started in 1994 as a joint project of the “academics” Jacob Goldenberg and Roni Horowitz, with the “agency people” Haim Hardouf, Haim Peres, and Shuki Berg at the Symbol Peres ad agency in Tel Aviv. Shuki, the Creative Director, was our supplier of examples and industry wisdom, and the Haims believed in the project enough to support it financially in its initial stages. Roni’s Ph.D. formalized, among other things, the Closed World principle which is the basis of several tools appearing in this book.

During these past 14 years, in parallel with the development of the body of research about the method, the trainers and facilitators of the SIT company (www.sitsite.com) have been applying the original tools, fleshing them out, polishing away those aspects that did not prove to be helpful, and enlarging the collection of tools and examples while working with (literally) thousands of agency people in dozens of countries. This work grounds the method in the day-to-day reality of advertising agencies and their clients, and makes all these participants in the workshops and courses true partners in its development. For this, we are truly thankful. Special thanks in this respect go to Fred Lamparter, who in 1995, as Head of Worldwide Training in Ogilvy & Mather, gave us our first chance to try out our budding tools and convinced us that, despite our shaky start, there was value in these concepts.

Since then, the main force in weaving the network of SIT users has been Martin Rabinowitz, and he is probably most responsible for its widespread acceptance. Idit Biton, Tamar Chelouche, Grant Harris, Orly Seagull, Nurit Shalev, and Yoni Stern have all been faithful teachers and helpful developers during these years, as well as the rest of the team at Systematic Inventive Thinking – SIT. Yonathan Dominitz, no longer with SIT, deserves thanks for his years as our roaming facilitator.
And last on the list, because first in their contribution to this book, many many thanks to Robyn Taragin and Omri Herzog, both from SIT. Robyn searched and researched, pled and negotiated and made sure that as many relevant examples as possible would get published; and Omri Herzog who literally transformed the varied and oftentimes messy inputs of the authors into as coherent a text as the raw materials allowed.
