PREFACE	xi
GUIDING SIGNS	xiv
CHAP.	
I. SUMMARY	1
II. INTRODUCTORY EXAMPLE	4
III. THE CHOICE OF COORDINATE DIFFERENCES	16
3/1. Existing practice	16
3/2. The division into horizontal layers	16
3/3. Effect of varying the size of the finite differences	18
3/4. The pattern on the map	18
3/5. Devices for maintaining a nearly square chequer	19
3/6. Summary on coordinate differences	19
3/7. The origin of longitude	20
IV. THE FUNDAMENTAL EQUATIONS	21
4/0. General	21
4/1. Characteristic equations of dry and moist air	23
4/2. The indestructibility of mass	23
4/3. Conveyance of water	25
4/4. Dynamical equations	30
4/5. Adiabatic transformation of energy. Entropy (See also Ch. 8/2/6)	35
4/6. Uniform clouds and precipitation	43
4/7. Radiation	46
4/8. The effects of eddy motion (See also Ch. 11/4)	65
4/9. Heterogeneity	94
4/10. Beneath the earth's surface	104
V. FINDING THE VERTICAL VELOCITY	115
5/0. Preliminary	115
5/1. Deduction of a general equation	116
5/2. Simplification by approximation	118
5/3. Method of solving the equation	119
5/4. Illustrative special cases	119
5/5. Further varieties of the simplified general equation	123
5/6. The influence of eddies	124
VI. SPECIAL TREATMENT FOR THE STRATOSPHERE	125
6/0. Introduction	125
6/1. Integrals of pressure and density	126
6/2. The continuity of mass in the stratosphere	127
6/3. Extrapolating observations of wind	127
6/4. The horizontal dynamical equations in the stratosphere	132
6/5. Radiation in the stratosphere	134
6/6. Vertical velocity in the stratosphere	135
6/7. Dynamical changes of temperature in the stratosphere	140
6/8. Summary	147

Cambridge University Press

978-0-521-68044-8 - Weather Prediction by Numerical Process, Second Edition

CONTENTS

CHAP.	PAGE
VII. THE ARRANGEMENT OF POINTS AND INSTANTS	149
7/0. General	149
7/1. The simplest arrangement of points	149
7/2. The arrangement of instants	150
7/3. Statistical boundaries to uninhabited regions	153
7/4. Joints in the lattice at the borders of sparsely inhabited regions	153
7/5. The polar caps	155
VIII. REVIEW OF OPERATIONS IN SEQUENCE	156
8/0. General	156
8/1. Initial data	157
8/2. Operations centered in columns marked "P" on the map	157
8/3. Operations centered in columns marked "M" on the chessboard map	179
8/4. Concluding remarks	180
IX. AN EXAMPLE WORKED ON COMPUTING FORMS	181
9/0. Introduction	181
9/1. Initial distribution observed at 1910 May 20 D 7 H G.M.T.	181
9/2. Deductions, made from the observed initial distribution, and set out on the computing forms	186
9/3. The convergence of wind in the preceding example	212
X. SMOOTHING THE INITIAL DATA	214
XI. SOME REMAINING PROBLEMS	217
11/0. Introduction	217
11/1. The problem of obtaining initial observations	217
11/2. Speed and organization of computing	219
11/3. Analytical transformation of the equations	220
11/4. Horizontal diffusion by large eddies	220
11/5. A survey of reflectivity	222
XII. UNITS AND NOTATION	223
12/1. Units	223
12/2. List of symbols	223
12/3. Relationships between certain symbols	228
12/4. Subscripts for height	228
12/5. Vector notation	229
INDEX OF PERSONS	230
INDEX OF SUBSIDIARY SUBJECTS	231
