A (amplitude) mode, 12–13
AAA, see Abdominal aortic aneurysms
Abdominal aorta, 105–117
abnormal images of, 113–116
anatomy of, 106
clinical protocols for, 115
distal aorta view, 110
literature review of, 117
longitudinal view of, 110–112, 115–116
mid-aorta view, 110
overview of, 105
proximal aorta view, 107–109
questions for exam, 105
technique and probe positioning,
106–112
tips and troubleshooting, 112–113
vs. vena cava, 111–112
Abdominal aortic aneurysms (AAA),
105–117
anatomy of, 106
diagnosis of, 112
exam questions for, 105
images of, 113–115
role of ultrasound in, 105
Abdominal hemorrhage, 43
Abortion terminology, 86
Abscesses
anatomy of, 230–232
literature review of, 233–234
overview of, 230
peritonsillar, 233–234
probe selection for, 230
questions for, 230
setup and procedure for, 231–232
Absorption, 4
Acoustic enhancement, posterior, 17–18
Acoustic power, 4–5
Acoustic shadowing, 14–15, 143, 205
Acute acalculous cholecystitis, 148
Acute cholecystitis, 138
Acute emphysematous cholecystitis,
148
Acute renal failure, 129–130
Adnexal masses, 97, 101
Advanced Trauma Life Support (ATLS)
course, 23
ALARA principle, 4–5
A-lines, see Reverberation
Amplitude
adjusting, 11
definition of, 1
mode for, 12–13
Anatomy
and abscess identification, 230–232
for ascite detection, 216
of brachial and cephalic veins,
209–210
cardiac, 57–59, 66–67, 75, 106–107,
111–112
for chest ultrasound, 169–171
for deep vein thrombosis, 153–158
for FAST exam, 24–28
for foreign body removal, 224
for fractures, 183–184
gallbladder, 135–136
for joint effusion and arthrocentesis,
219–220
for lumbar puncture, 235
ocular, 175–177
pelvic, 26–27, 32, 36
for pleural effusion and thoracentesis,
213
renal and bladder, 119–121
thoracic, 54–55
uterine, 87–88
for vascular access, 195–198
Anembryonic gestation, 86
Anesthetic, 225–227, 229
Aneurysm, see Abdominal aortic
aneurysms; Ileac arteries
Anterior chamber, 175–176
Anterior zone of chest, 171
Anticoagulation therapy, see Deep vein
thrombosis (DVT)
Aorta, 111–112

  literature on, 211–219
  overview of, 209
  procedure for, 210
  questions for, 209
  tips and troubleshooting, 210–212
  see also Vascular access and cannulation

Cervix, viewing, 91–92

CFA, see Common femoral artery

CFV, see Common femoral vein

Chest ultrasound, 169–173
  abnormal images of, 172
  anatomy of, 169–171
  future applications for, 173
  hemothorax, see Hemothorax
  literature review of, 173
  normal images of, 172
  overview of, 169
  pneumothorax detection, see Pneumothorax
  probe selection for, 171
  questions for, 169
  tips and troubleshooting, 172
  views of, 171
  see also Echocardiography

Cholecystitis, 144–148

Cholecystitis
  and biliary obstruction, 140
  description of, 143–144
  images of, 143–145, 147
  scanning for, 138
  and WES sign, 143–144, 146

Chronic hydronephrosis, see Hydronephrosis

Clinical protocols
  for abdominal aorta exam, 115
  for deep vein thrombosis ultrasound, 164
  for echocardiography, 77–78
  for FAST exam, 43
  for first trimester ultrasound, 100
  for gallbladder ultrasound, 149
  for renal ultrasound, 131

Clot formation, 153–155, 159–160, 196–198
  see also Deep vein thrombosis

Cobblestoning effect of abscesses, 232

Color Doppler
  and bladder ultrasound, 122–123
  and clots, 160
  description of, 13–14

for gallbladder ultrasound, 137–138, 141–143, 145
image of, 13
and popliteal vein and artery, 155
and venous imaging, 197

Comet tails
  in chest cavity, 169–171, 173
  description of, 15–16
  for pneumothorax detection, 45–47

Common bile duct (CBD)
  images of, 137–138, 142, 145
  images with color Doppler, 142–143, 145
  obstruction of, 140
  scanning for, 137–138

Common femoral artery (CFA), 154–155, 161–162

Common femoral vein (CFV)
  description of, 154–155, 158–159
  images of, 156, 159, 161–162, 197
  patient positioning for, 160
  probe positioning for, 159

Complete abortion, 86

Compression techniques, see Deep vein thrombosis (DVT)

Computed tomography (CT)
  and abdominal aortic aneurysms, 105
  and aortic dissection, 115
  vs. echocardiography, 75
  and FAST exam, 23
  of hepatorenal recess (Morison’s pouch), 25
  in penetrating trauma, 43
  for renal arteries, 109
  of splenorenal recess, 26
  and ureteral stones, 119

Conventions
  for abdominal aorta exam, 107, 110
  for cardiology markers, 7, 55–56, 58
  for cardiology positional nomenclature, 54
  for hepatorenal recess markers, 28
  for imaging markers, 10
  for markers in FAST exam, 28, 30–32
  for pelvic markers, 31
  for splenorenal recess markers, 30
  for subxiphoid markers, 32
  for transvaginal markers, 91–92
  for vascular access, 201–202

Convex probes, 5–6

Coronal view, 8–10

Costs
  of FAST exam, 24, 45–47
  and first trimester ultrasound, 101

Crystals (quartz), 5
Index

CT, see Computed tomography
Cysts, renal, 124, 128–129
D (Doppler) mode, 13–14
Decubitus position, 122
for abdominal aorta exam, 112–113

for pneumothorax detection, 46–48

Main lobular fissure, 135–137

Markers for abdominal aorta exam, 107, 110
for FAST exam, 28, 30–32
in hepatorenal recess, 28
overview and conventions, 7, 10
in pelvic view, 31
in splenorenal recess, 30
in subxiphoid view, 32
for transvaginal view, 91–92
for vascular access, 201–202
Megahertz (MHz), 1–2
Mid-aorta view, 110
Mirror images, 15–18, 42
Missed abortion, 86, 99
Mitral valve, 59–60
Molar pregnancy, 99
Morison’s pouch, see Hepatorenal recess
Motion mode, see M (motion) mode
Murphy’s sign, sonographic, 138, 141, 145–146, 148
Myometrial mantle, 97–98

Ocular ultrasound, 175–181
abnormal images of, 179–180
anatomy of, 175–177
future applications for, 181
literature review of, 180
normal images of, 176, 178
and optic nerve sheath diameter, 175–179
overview of, 175
probe selection for, 177
questions for, 175
tips and troubleshooting, 177–178
views of, 177
Optic nerve sheath diameter, 175–179
Orientation and positioning, see Patient positioning; Positioning of probe
Orthopedic injuries, see Fractures; Joint effusions

Pacing capture, detection of, 76–77
Papilledema vs. ocular ultrasound, 175
Paracentesis for ascites, 216–219
anatomy of, 216
equipment and setup for, 217
literature on, 218–219
probe selection for, 217
procedure for, 217–218
questions for, 216
role of ultrasound in, 216
tips and troubleshooting, 218
see also Thoracentesis
Paracolic gutter
description of, 24, 213
fluid movement in, 28
Parasternal long axis view, 59–60
abnormal images of, 68, 73
normal images of, 60–61, 65
probe positioning for, 56–59
troubleshooting and tips for, 64
Parasternal short axis view
description of, 59–60
images of, 62, 66, 74
probe positioning for, 61
tips and troubleshooting, 64
Patient positioning
for common bile duct view, 141
for deep vein thrombosis, 158–160
and FAST exam, 28–33
for gallbladder ultrasound, 137, 140–141
and inferior pole of kidney, 28–29
for joint effusion and arthrocentesis, 223
for lumbar puncture, 235
for paracentesis, 217–218
reverse Trendelenberg, 197–198, 207
for thoracentesis, 213–214
for vascular access, 200, 207
see also Positioning of probe
PEA, see Pulseless electrical activity (PEA)
Pelvic ultrasound
anatomy of, 26–27
and FAST exam, 31–32
fluid in (abnormal images), 40–41
normal images of, 36
tips and troubleshooting for FAST exam, 34
see also Intrauterine pregnancy (IUP)
Pericardial effusion evaluation
definition of, 66–68
differential diagnosis of, 67–68
fat pad, 68
images of, 67–68
vs. pleural effusion, 57–59
views for, 56–59
Pericardial hematoma, 69–70
Pericardiocentesis, 76
Pericardium, 57–59, 66–67
Peripheral veins, 205–206
Peritoneal cavity and fluid movement, 24–28
Peritonsillar abscesses, 233–234
Peroneal vein, 153
Phrenicolic ligament, 24, 28
Piezoelectric effect, 5
Pitch, roll and yaw, 7–8
see also Positioning of probe
Pleural effusion and thoracentesis, 212–215
anatomy of, 213
equipment and setup for, 213–214
literature on, 215–216
vs. pericardial effusion, 57–59, 67–68
probe selection for, 213
procedure for, 214–215
questions for, 213
role of ultrasound in, 212
tips and troubleshooting, 210–215
Pneumothorax
and central venous catheterization, 208
and chest x-ray, 45
detection of, 45–47
diagnosis of, 45, 47
and extended FAST exam, 24
scanning tips for, 172
technique and probe positioning, 45–47 and thoracentesis, 215–216
POC (products of conception), 86
Point of maximal impulse (PMI), 60, 64
Polycystic kidney disease, 129
Popliteal vein (PV) and artery (PA)
description of, 153, 155-images of, 158, 162–163-patient positioning for, 160-probe positioning for, 159
Portal triad, 137
Positioning of probe
see also Patient positioning; Probe selection
Posterior acoustic enhancement, 17–18
Posterior zone of chest, 171
Pouch of Douglas, 27, 89–90
Power Doppler
definition of, 14-images of, 14-for pneumothorax detection, 46, 48
Pregnancy, see First trimester ultrasound; Intrauterine pregnancy
Probe markers, see Markers
Probe selection
Products of conception (POC), 86
Proprioception, see Positioning of probe
Protocols, clinical, see Clinical protocols
Proximal aorta
Proximal venous system, see Deep vein thrombosis (DVT)
Pseudoaneurysms, 159–160-Pseudo-gestational sac of ectopic pregnancy, 99-Pulmonary artery catheter vs. echocardiography, 73-Pulmonary edema, 173
see also Chest ultrasound
Pulmonary embolism (PE), 75–76, 78-Pulmonary ultrasound, 169–171
see also Chest ultrasound
Pulseless electrical activity (PEA), 73–75-Pyramids, renal, 119–121, 124, 127-Pythagorean theorem, 202–203-Quartz crystals, 5
Renal ultrasound (cont.)
   normal images of, 122, 124–125
   overview of, 119
   and polycystic kidney disease, 129
   probe selection for, 120
   questions of, 119
   and renal calculi, 128
   and renal cysts, 128–129
   tips and troubleshooting, 124
   views of, 120–123
   see also Hepatorenal recess; Splenorenal recess
Resolution, 4
Respiratory variation, assessment, 165
Retina, 175–176
Retinal detachment, 175, 179
Reverberation, 15–16, 169–171
Reverse Trendelenburg position, 197–198, 207
Rib shadows
   and gallbladder views, 140–141
   and hepatorenal recess, 33
   and parasternal long axis view, 64
   in pneumothorax detection, 45–47
   and renal view, 122
Right lateral decubitus position, see Decubitus position
Right portal vein, 135–138, 142
Right upper quadrant (RUQ), see Gallbladder; Hepatorenal recess (Morison's pouch)
Roll, see Pitch, roll and yaw
RV/LV ratio, 60–62
Sagittal view, 8–10
Saphenous vein, 153
Scalloping of right ventricle, 69
Scanning modes, 12–14
Scattering, 4
Screen markers, 7
Seagull sign, 108, 219–222
Short axis approach to vascular access, 198–200, 202–203, 207
Short axis, cardiac, 54, 59–60
Skull trauma, 188
   see also Fractures
Sonographic Murphy's sign, 138, 141, 145–146, 148
Spectral Doppler
   description of, 13–14
   image of, 13
   and popliteal vein and artery, 155
   vena cava vs. aorta, 107
   and venous imaging, 197
Spleen, see Splenorenal recess
Splenorenal recess
   description of, 24–25, 30
   fluid in (abnormal images), 39–40
   normal images of, 26, 31, 35
   probe positioning for, 30–31
   tips and troubleshooting, 33
   Spontaneous abortion and miscarriage, 86
Static approach to vascular access
   complication frequencies, 208
   vs. dynamic approach, 198–200
   literature on, 207–208
   preparation for, 200–201
Subclavian vein, 205, 208
Subcostal view, see Subxiphoid view
Subcutaneous fat, appearance on ultrasound, 224
Subxiphoid view
   abnormal images of, 69–70
   fluid in (abnormal images), 41
   four chamber view, 56–58, 65–66, 74
   normal images of, 33, 37, 65, 68
   probe positioning for, 32–33
   troubleshooting, 64
Superficial femoral artery (SFA), 155
Superficial femoral vein (SFV), 155, 157, 197
Superior mesenteric artery (SMA), 108–109
Supine position, see Patient positioning
Supra-pubic taps, 119
Symphysis pubis, 31
Tegaderm, 177
TGC, see Time-gain compensation (TGC)
Thoracentesis, 212–215
   anatomy of, 213
   equipment and setup for, 213–214
   literature on, 215–216
   probe selection for, 213
   procedure for, 214–215
   questions for, 213
   role of ultrasound in, 212
   tips and troubleshooting, 210–215
Threatened abortion, 86
Thrombosis, 153–155, 159–160, 196–198
   see also Deep vein thrombosis
Tibial vein, 153
Time-gain compensation (TGC), 11–12
Transabdominal view, 89–90
Transducers, see Probe selection
Transvaginal view, 90–92
Transverse or axial view
   of bladder, 122–123, 125
   of bone fractures, 184
   of gallbladder, 138, 148
   of kidneys, 122, 125–126
probe positioning for, 8–9
in transvaginal scan, 90, 92
Trauma, see FAST (Focused assessment with sonography in trauma)
Trendelenberg position, 197–198, 207
Two-person cannulation, 199–200, 207
Ultrasonography
history of use, 23–24
instrumentation, 5–6
terminology and definitions of, 1–5
Ureteral jets, 122–123
Ureteral obstruction, 119
Ureteral stones, 119
Urinary tract ultrasound, see Bladder
Uterine ultrasound
anatomy of, 87–88
transabdominal view of, 89–90
see also First trimester ultrasound;
Pelvic ultrasound
Vascular access and cannulation, 195–208
anatomy of, 195–198
complications of, preventing, 208
difficulties in, 195
equipment for, 198
of external jugular vein, 205–206
indications for, 195
literature review of, 207–208
long axis technique, 204–205, 207
of peripheral veins, 205–206
pitfalls for, 207
preparation for, 199–202
probes for, 198–199
questions for, 195
role of ultrasound in, 195
short axis technique, 202–203, 207
static vs. dynamic approach, 198–200
of subclavian vein, 205
tips for scanning, 206–207
two-person, 199–200, 207
see also Brachial and cephalic vein cannulation
Velocity, 1, 3
Vena cava
vs. aorta, 107, 111–112
and central venous pressure, 70–71
inferior, images of, 71–72, 108–109
see also Inferior vena cava (IVC)
Venipuncture, see Vascular access
Venography studies, 153–155
Venous return, augmented, 165
Ventricles
dimensions of, 60–62, 66
pressure in, 75
scalloping of, 69
Vertebral shadow, 107, 113–114
Volume estimation, bladder, 123
Wall echo shadow (WES) sign, 143–144, 146
Water bath, 225
Wavelength, 2
X-rays vs. ultrasound, 169, 183
Yaw, see Pitch, roll and yaw
