Preface	xi
Foreword	
<i>Tom E. Peck</i>	xiii
Introduction	1
Section 1 • Mathematical principles	5
Mathematical relationships	5
Exponential relationships and logarithms	7
Physical measurement and calibration	14
The SI units	18
Section 2 • Physical principles	21
Simple mechanics	21
The gas laws	24
Laminar flow	26
Turbulent flow	27
Bernoulli, Venturi and Coanda	28
Heat and temperature	30
Humidity	33
Latent heat	35
Isotherms	37
Solubility and diffusion	38
Osmosis and colligative properties	40
Resistors and resistance	42
Capacitors and capacitance	43
Inductors and inductance	46
Defibrillators	48
Resonance and damping	50
Pulse oximetry	54
Capnography	57
Absorption of carbon dioxide	62
Cardiac output measurement	64
The Doppler effect	68
Neuromuscular blockade monitoring	69

viii	Contents	
	Surgical diathermy	74
	Cleaning, disinfection and sterilization	76
	Section 3 • Pharmacological principles	78
	The Meyer–Overton hypothesis	78
	The concentration and second gas effects	80
	Isomerism	82
	Enzyme kinetics	85
	Drug interactions	88
	Adverse drug reactions	89
	Section 4 • Pharmacodynamics	91
	Drug–receptor interaction	91
	Affinity, efficacy and potency	93
	Agonism and antagonism	97
	Hysteresis	103
	Section 5 • Pharmacokinetics	104
	Bioavailability	104
	Volume of distribution	105
	Clearance	107
	Compartmental models	109
	Context-sensitive half time	113
	Section 6 • Respiratory physiology	115
	Lung volumes	115
	Spirometry	117
	Flow–volume loops	119
	The alveolar gas equation	123
	The shunt equation	124
	Pulmonary vascular resistance	126
	Ventilation/perfusion mismatch	127
	Dead space	128
	Fowler’s method	129
	The Bohr equation	130
	Oxygen delivery and transport	132
	The oxyhaemoglobin dissociation curve	134
	Carriage of carbon dioxide	136
	Work of breathing	138
	Control and effects of ventilation	139
	Compliance and resistance	142

	Contents	ix
Section 7 • Cardiovascular physiology	144	
Cardiac action potentials	144	
The cardiac cycle	146	
Pressure and flow calculations	149	
Central venous pressure	151	
Pulmonary arterial wedge pressure	153	
The Frank–Starling relationship	155	
Venous return and capillary dynamics	157	
Ventricular pressure–volume relationship	162	
Systemic and pulmonary vascular resistance	167	
The Valsalva manoeuvre	169	
Control of heart rate	171	
Section 8 • Renal physiology	173	
Acid–base balance	173	
Glomerular filtration rate	176	
Autoregulation and renal vascular resistance	177	
The loop of Henle	179	
Glucose handling	181	
Sodium handling	182	
Potassium handling	183	
Section 9 • Neurophysiology	184	
Action potentials	184	
Muscle structure and function	188	
Muscle reflexes	191	
The Monro–Kelly doctrine	193	
Intracranial pressure relationships	194	
Formation and circulation of cerebrospinal fluid	197	
Pain	198	
Section 10 • Statistical principles	200	
Data types	200	
Indices of central tendency and variability	202	
Types of distribution	206	
Methods of data analysis	208	
Error and outcome prediction	217	
Clinical trials	219	
Evidence-based medicine	220	
Appendix	222	
Index	236
