- Γ -admissible collection of polyhedra, 161
- Γ -admissible polyhedral decomposition, 37, 75
- ℓ -fold top differentials, 192
- k -gon of rational curves, 20
- admissible structure of polyhedral complexes, 183
- associated boundary component, 164
- Baily–Borel compactification, 165
- best rational approximations, 35
- boundary component
 - rational
 - of a bounded domain, 140
 - of a homogeneous self-adjoint cone, 52
 - boundary component
 - of a bounded domain, 127
- central co-core, 92
- centralizer of a boundary component, 134
- characteristic function of a convex
 - non-degenerate cone, 38
- co-core, 82
- compact root, 112
- compact torus, 2
- complementary module, 195
- cone, 38
 - k -irreducible, 56
 - central, 93
 - non-degenerate, 38
 - perfect, 93
 - self-adjoint, 38
 - self-dual, 38
- conical polyhedral complex, 11
- core, 77
- cuspidal, 15, 26
- cylindrical set, 100
- decomposition into central cones, 90
- exposed point, 85
- extendable form, 192
- extreme point, 82
- flag of k -boundary components, 64
 - standard, 64
- fundamental 5-factor decomposition, 143
- geodesic projection, 140
- Hermann convexity theorem, 120
- hermitian symmetric space, 105
- Hilbert modular surface, 26
- Hilbert modular variety, 103
- horocycle, 16
- idempotents
 - mutually orthogonal, 46
 - complete set of, 47
 - maximal set of, 47
- integral structure on a conical polyhedral complex, 12
- Jordan algebra, 43
 - formally real, 47
- kernel, 77
 - rationally locally polyhedral, 84
- Kodaira dimension, 194
- Koecher's theorem, 191
- Krein–Milman theorem, 82
- level- k structure, 20
- Levi-pseudoconvex, 104
- manifold of general type, 194
- mutation, 51
- natural basepoint
 - of a boundary component, 133
- neat subgroup, 176
- non-compact root, 112
- normalizer of a boundary component, 129
