physics (cont.) focusing of ultrasound beams, 16-17 frequencies used in diagnosis, 7-8 frequency, 5 harmonic imaging, 18-19 intensity of ultrasound waves (I), 6 interference, 13-14 law of reflection, 10 longitudinal waves, 4-5 non-linear propagation, 18 phase, 5-6 power of ultrasound waves, 6 practical sources for ultrasound beams, 15-16 pressure of ultrasound waves, 6 pulse spectrum, 17-18 reflection, 8-10, 11 reflection of ultrasound waves, 8 refraction, 11-12 scattering, 10-11 Snell's law, 11-12 sound waves, 4-5 speed of sound, 6-7 speed of waves, 5 transverse waves, 4 ultrasound beams, 13 ultrasound pulse, 17 wavelength (λ), 5 wavelengths used in diagnosis, 7-8 waves, 4-5 piezoelectric materials, 27 piezoelectric plate, 24-25 plane circular piston source, See plane disc transducer plane disc transducer, 15-16 plane wave generation, 14 plane wave techniques, 43 PMN-PT, 27 point-to-point method of measurement, 76, 80 post-processing B-mode, 60-61 post-processor colour flow systems, 124-25 Pourcelot's resistance index (RI), 119 power Doppler, 121, 126-27 See also colour flow systems. power of ultrasound waves, 6 power or acoustic output control B-mode. colour flow systems, 128 Pulsed Doppler systems, power threshold control colour flow systems, 129 pressure of ultrasound waves, 6 propagation artefacts contrast imaging, 194 PT (lead titanate), 27

pulsatility index (PI), 119 pulse average intensity, 20 pulse duration (PD), 20 pulse inversion (harmonic imaging)/ phase inversion imaging technique, 188 pulse inversion amplitude modulation (PIAM) imaging technique, 188 pulse inversion imaging, 54-55 amplitude modulation (PIAM) imaging, 186 B-mode imaging, contrast imaging, pulse repetition frequency, 20 pulse repetition frequency (PRF) control colour flow systems, 128 spectral Doppler, 109 pulse spectrum, 17–18 harmonics, 18 pulse-echo principle, 2 pulse-echo sequence, 2-3 PW (pulsed wave) Doppler, 86-87, 105-06 Doppler signal processor, 91-93 PZN-PT, 27 PZT (lead zirconate titanate), 24-25 quad processing, 40 quality assurance (QA), 142-54 absolute performance measures (B-mode), 143, 144-51 clinical and technical assessment, 142 - 43definition, 142 Doppler ultrasound testing, 151-54 relative performance measures (B-mode), 143-44 standards and guidance, 142 test object materials and targets, 145 radial format, 3 range ambiguity, 114 range error artefacts, 68-69 range gate size and position spectral Doppler, 110 rayl, 8 See also acoustic impedance. Rayleigh scattering, 10 read zoom, 59 real-time display B-mode, 59 receive beam, 23-24 receive focus, 29-31 rectangular field of view, 3 reflection artefacts, 72-74 reflection of ultrasound waves, 8-10

acoustic impedance (z), 8 amplitude reflection coefficient $(R_{\Lambda}), 9$ angle of incidence (θ_i), 10 angle of reflection (θ), 10 diffuse reflection, 11 intensity reflection coefficient (R_i), 9-10 intensity transmission coefficient (T₁), 10 law of reflection, 10 scattering, 10-11 refraction B-mode measurement errors, 80 of ultrasound waves, 11-12 refraction artefacts, 70-71, 114 relative performance measures (B-mode), 143-44 air tests, 143-44 crystal drop-out, 143 definition, 143 noise, 144 sensitivity, 143-44 uniformity, 143 resistance index (RI), 119 resistance to blood flow, 101-02 resolution, 8, 13, 18 axial resolution, 26, 66 Doppler testing, 153-54 lateral resolution, 23-24, 64-65 slice thickness, resonant frequency of microbubbles, 184-85 reverberation artefacts, 73-74 reversal of blood flow, 96, 97, 98, 99 risk. See safety of diagnostic ultrasound and hazard, 155-56 risk assessment, 155-56 risk/benefit judgements, 155-56 safety of diagnostic ultrasound, 155 - 69safety of contrast agents, 161-62, 193 safety of diagnostic ultrasound, 155-69 acoustic output measurements, 156 BMUS guidelines for safety, 164 - 65cavitation effects, 155, 160-61 contrast materials, 161-62, 193 embryological exposure, 167-68 epidemiological evidence for hazard, 162-63 estimated in situ values for exposure, 156 estimation of exposure levels, 156

Index

European Medical Devices Directive (MDD), 163-64 examinations requiring particular caution, 165 exposure to ultrasound, 156 fetal exposure, 168 first trimester, 167-68 free-field acoustic output measurements, 156 gas body activation, 155, 160-61 good safety practice, 165 in utero exposure to ultrasound, 167-68 increase in use of diagnostic ultrasound, 167 increasing output from diagnostic scanners, 166 intestinal haemorrhage, 162 levels of exposure of patient populations, 165-67 lung capillary haemorrhage, 162 management of safety, 163 manufacturers' responsibility, 163-64 mechanical index (MI), 157 neonatal scanning, 168-69 new diagnostic modes of operation, 166 - 67new technologies, 166-67 non-thermal mechanisms and effects, 160-62 obstetric scanning, 167-68 obstetric scanning on patients with fever, 168 ophthalmic scanning, 169 patients of particular concern, 165 proper maintenance of equipment, 165 risk and hazard, 155-56 risk assessment, 155-56 risk/benefit judgements, 155-56 risks associated with thermal effects, 160 safety for specific uses, 167-69 safety record of ultrasound, 169 second and third trimesters, 168 temperature measurement, 158 temperature predictions, 157-58 thermal effects, 155, 156-60 thermal indices, 158-60 training of users, 164-65 US FDA regulations, 163 use of appropriate equipment, 165 users' responsibility, 164-65 sample volume, 43 and speckle, 67 colour flow systems, 121-22 PW Doppler, 105-06 size and position, 111-12

sample volume selection spectral Doppler, 110 scale (PRF) control spectral Doppler, 109 scattering of ultrasound waves, 10-11 second harmonic imaging with contrast agents, 186 sector field of view, 3 sector scanning phased-array transducers, 34-35 strongly convex curvilinear-array transducers, 34 sensitivity Doppler testing, 153 relative performance measure, 143 - 44shaded surface display of 3D dataset, 175-76 shadowing artefacts, 114, 135 shear force, 207 shear modulus G and shear waves, 207 shear wave elastography, 196, 207-13 complexity of real tissue elastic behaviour, 213 elastic modulus estimation (external actuator method), 208-10 elastic modulus estimation (radiation force methods), 210-11 estimating tissue stiffness from shear wave velocity, 207-08 shear wave imaging, 41, 43 side lobes of a beam, 15-16 sine wave, 5 size error artefacts, 69 slice thickness, 23-24 slice thickness artefacts B-mode imaging, 65–66 slice thickness control linear-array transducers, 33-34 slice thickness resolution absolute performance measurement, 146 - 47Snell's law, 11-12 SonoVue, 191 sound speed of, 6-7 sound waves, 4-5 spatial resolution absolute performance measurement, 146-47 speckle, 37, 67, 124-25, 136 spectral analysis, 107 spectral broadening, 112-13, 114, 119 spectral display, 105 spectral Doppler, 105-20 continuous wave (CW) Doppler, 105 development of ultrasound imaging, 106-07 Doppler ultrasound systems, 105-07

duplex Doppler systems, 106-07 features, 96 pulsed wave (PW) Doppler, 105-06 spectral analysis, 107 spectral display, 105 spectral Doppler artefacts, 114 aliasing, 114 angle dependence, 114 intrinsic spectral broadening, 114 inverted mirror image of the Doppler spectrum, 107, 114 multiple reflections, 114 range ambiguity, 114 refraction, 114 shadowing, 114 spectral Doppler controls and optimisation baseline, 109-10 beam steering angle, 110-11 Doppler angle cursor, 111 filter, 110 focal depth, 111 gain, 107 gate size and position, 110 grey-scale curve, 111 high-pass filter, 110 invert, 110 pulse repetition frequency (PRF), 109 range gate size and position, 110 sample volume selection, 110 scale (pulse repetition frequency), 109 transmit frequency, 109 transmit power, 107-08 spectral Doppler display, 86, 92 blood flow profile effects, 111 effects caused by equipment set-up, 113 effects of intrinsic spectral broadening, 112-13 effects of pathology, 113-14 effects of sample volume size and position, 111-12 factors affecting, 114 non-uniform insonation effects, 111 spectral Doppler indicators of disease, 113-14 changes in detected Doppler frequency shift, 113 changes in spectral broadening, 114 changes in velocity ratios, 113 changes in waveform shape, 114 spectral Doppler measurement blood velocity, 114-15 blood velocity measurement errors, 115 - 16errors related to angle of insonation, 115-16
