Preposition Placement in English

Preposition placement, the competition between preposition-stranding (*What is he talking about?*) and pied-piping (*About what is he talking?*), is one of the most interesting areas of syntactic variation in English. This is the first book to investigate preposition placement across all types of clauses that license it, such as questions, exclamations and *wh*-clauses, and those which exhibit categorical stranding, such as non-*wh* relative clauses, comparatives and passives. Drawing on over 100 authentic examples from both first-language (British) and second-language (Kenyan) data, it combines experimental and corpus-based approaches to provide a full grammatical account of preposition placement in both varieties of English. Although written within the usage-based Construction Grammar framework, the results are presented in theory-neutral terminology, making them accessible to researchers from all syntactic schools. This pioneering volume will be of interest not only to syntacticians, but also to second-language researchers and those working on variation in English.

THOMAS HOFFMANN is Assistant Professor of English Linguistics at the University of Osnabrück, Germany. His main research interests are Construction Grammar and the syntactic and phonetic variation in World Englishes. He has co-edited the volume *World Englishes: Problems, Properties and Prospects* (2009; with Lucia Siebers) and together with Graeme Trousdale is currently co-editing the *Oxford Handbook of Construction Grammar*.
STUDIES IN ENGLISH LANGUAGE

General editor
Merja Kytö (Uppsala University)

Editorial Board
Bas Aarts (University College London), John Algeo (University of Georgia),
Susan Fitzmaurice (University of Sheffield), Christian Mair (University of Freiburg), Charles F. Meyer (University of Massachusetts)

The aim of this series is to provide a framework for original studies of English,
both present-day and past. All books are based securely on empirical research,
and represent theoretical and descriptive contributions to our knowledge of
national and international varieties of English, both written and spoken. The
series covers a broad range of topics and approaches, including syntax, phonology, grammar, vocabulary, discourse, pragmatics and sociolinguistics, and is
designed for an international readership.

Already published in this series:
Charles F. Meyer: Apposition in Contemporary English
Jan Firbas: Functional Sentence Perspective in Written and Spoken Communication
Izchak M. Schlesinger: Cognitive Space and Linguistic Case
Katie Wales: Personal Pronouns in Present-Day English
Laura Wright: The Development of Standard English, 1300–1800: Theories, Descriptions, Conflicts
Charles F. Meyer: English Corpus Linguistics: Theory and Practice
Stephen J. Nagle and Sara L. Sanders (eds.): English in the Southern United States
Anne Curzan: Gender Shifts in the History of English
Kingsley Bolton: Chinese Englishes
Irmay Taavitsainen and Päivi Pahta (eds.): Medical and Scientific Writing in Late Medieval English
Elizabeth Gordon, Lyle Campbell, Jennifer Hay, Margaret Maclagan, Andrea Sudbury and Peter Trudgill: New Zealand English: Its Origins and Evolution
Raymond Hickey (ed.): Legacies of Colonial English
Merja Kytö, Mats Rydén and Erik Smitterberg (eds.): Nineteenth-Century English: Stability and Change

L – – d! said my mother, what is all this story about?——

A COCK and a BULL, said Yorick —— And one of the best of its kind, I ever heard. (Laurence Sterne, *The Life and Opinions of Tristram Shandy, Gentleman*)

Hopefully the present book does not turn out to be a ‘cock and bull’ story but qualifies as valid scientific analysis of preposition placement in English. Also I would not go as far as labelling it ‘one of the best of its kind’, but the current version is definitely better than any of the earlier drafts. This has to do with the great number of friends and colleagues who constantly provided invaluable feedback and support.

First and foremost, I have to thank Edgar W. Schneider for his continuing support and friendship throughout the various stages of this project. It was he who suggested preposition-stranding as a potential topic for an MA thesis seven years ago, and little did we both realize at the time that it would eventually lead to a PhD thesis and, finally, end up as a book in CUP’s *Studies in English Language* series. The relationship between my MA and PhD theses can probably be best described as loose family resemblance: both deal with preposition-stranding, but while the former limited itself to relative clauses, the PhD investigated all constructions exhibiting the phenomenon in present-day English. Furthermore, in contrast to the MA study, for the PhD thesis I corroborated corpus data with psycholinguistic experiments and focused not only on British English but compared it to the second-language variety of English spoken in Kenya. Finally, while the syntactic description of preposition placement in my MA thesis was couched in arcane Minimalist Program terminology, the PhD opted for an arcane Construction Grammar analysis. From this short overview of the numerous changes that the work has undergone in the past few years it will be obvious that supervising my theses was not an easy task. Edgar, however, put up with all these linguistic mood swings. In addition to having him as my thesis supervisor, for the past five years I have also had the pleasure of working for Edgar’s research team. Both as a supervisor and as a boss he not only allowed me a great deal of freedom to pursue my own linguistic research, but also offered support whenever I needed it (be it for grant applications or comments on earlier
Acknowledgements

drafts of articles). For all of this, I can’t thank him enough and I am very much aware how lucky I am to have him as a boss and, even more importantly, as a friend.

Next I would like to thank my second supervisor, Roswitha Fischer. Way back in the last millennium when I was still a student she was the first to offer me a job as a student tutor at the English department of the University of Regensburg. At the time I mainly wanted the job for financial reasons, but it was clearly the first step towards my decision to pursue an academic career in English linguistics. I don’t know whether this has done the field of linguistics much good, but I certainly profited from this decision. So I sincerely would like to thank Roswitha for making all this possible in the first place.

As usual, there are many others without whom nothing even closely resembling the present book could have been written. During my field trip to Kenya, Alfred Buregeya from the University of Nairobi helped me find safe accommodation, ensured that I got enough subjects for all of my experiments and invited me to his house to spend some time with his wonderful family. Graeme Trousdale and And Rosta, on the other hand, supplied me with a large number of my British English subjects for the experiments. I am deeply grateful to all three of them for their help. In addition to that, I would like to thank Stefan Th. Gries for providing me with his Coll.analysis software, and I am also very grateful to John Maindonald for his help with the R software, as well as to John Paolillo and Robert Sigley for their Goldvarb support. I am furthermore indebted to Sam Featherston for introducing me to the WebExp software and for his continuous help with all questions concerning the statistical analysis of Magnitude Estimation data in SPSS. Also, I am in Manfred Sailer’s debt for having a look at my earlier endeavours into HPSG. Andreas Dufter I would like to thank for proofreading chapter 3. A big thank you also goes to Holger Saurenbach, who not only provided me with constant food for thought, but in essence converted me to Construction Grammar. Finally, I have to thank my friend Peter Waller who agreed to proofread my manuscript. I hope I can return the favour in the not so distant future.

Next, I would like to thank everyone at Cambridge University Press for their permanent support in publishing this book. In particular, I am, of course, extremely grateful to the series editor, Merja Kytö, for considering my book a possible contribution to the excellent Studies in English Language series in the first place. On top of this, I would like to express my gratitude to the commissioning editor, Helen Barton, for her continuous support throughout the entire publication process. Finally, I would like to thank the two anonymous reviewers for their valuable comments, which have helped to greatly improve the quality of the book.

Last but not least, I would like to thank my wife Moni, my rock of love, who’s keeping it real and always knows what time it is.
