observers, 225–237

inertial, 231–237
operator exponential of, 286
identity, 288
Liouville, 285
projection, 283–285
orbital, electron, 79
order, of tensor, 303
orientation, 18
orthogonal
displacements, 306
group, 340
map, 338
transformation, 227, 338–343
characterisation of, 338–343
determinant, 339
inverse, 339
proper, 340
vectors, 310
Orth V, 340
Orth + V, 340
orthonormal basis, 313, 318
for Lin V, 335
oscillation of pendulum, 237

pair potential, 107
pairwise-balanced interactions, 78, 85
paradox in interpretation of pressure, 41
in mixture theories, 177–179
parallel displacements, 304
planes, 366
circumferency, 401
partition, 383
fine, 384
into ϵ-cells, 210
of surface into ϵ-subsurfaces, 213
peridynamics, 5, 258–262
permeability, 188
tensor, 206
permutation factor, 314
phase space, 263
calculus in, 400–406
deformations in, 402
homogeneous, 402
placement, 400
distances, 401
line, 402
plane, 402
point, 264
smooth surface, 405
volume, 401, 405
physical descriptors, 225
physically admissible homogeneous deformations, 363, 365, 380
Piola-Kirchhoff stress, 136–137, 257
plane euclidean space, 366
phase space, 402
point euclidean space, 366
material, 7, 8, 73, 75, 168
phase space, 264
polar decomposition theorem, 346–347
pore size, 189
space, 188
volume, 49–50
porosity, 50, 168
porosity, at scales $\varepsilon_1, \varepsilon_2$, 40, 189
porous media, 4, 188–208
fluid in, 4
creeping flow, 202
interfacial region, 192
linear momentum balance, 190, 192–195
mass conservation, 189
non-slip, non-penetration, 196
saturated case, 189
length scales, 188
positive-definite linear transformation, 344
square root, 345
potential
multibody, 277–281
separation-dependent, pair, 107
power expended by couples, 29
external forces and couples, 23
pressure
back, porous body, 199
in a gas, 41, 131
partial, 174
principal invariants of linear transformation, 326–331
first (trace), 326–328
second, 328–329
third (determinant), 329–331
principle
of material frame-indifference, 237, 249
of material objectivity, 250
probabilistic considerations, 79, 264–267
probability
density, 79
function, 265, 281–282
for point mass location, 268
product (of vectors)
inner, 332
scalar, 310
tensor, 317
vector, 311–312
projection operator
definition, 283
methodology, 281–289
Index
motivating assumptions, 282
properties, 284–286
projection, perpendicular, 321
proper orthogonal group, 340
linear transformation, 340
characterisation of, 341–343
propulsion
jet, 148–150
rocket, 146–147
propulsive agencies, 149–150
pseudo-limits, 211, 214
scalar, 338
vector, 338
pulse jet, 150
radiative heat supply, 29
raindrop falling, 150
ram jet, 148–149
range of interactions, 101, 212–213, 261, 276
cut-off, 101, 212–213, 259
effective, 212–213
reacting mixtures, 184–187, 296
energy balance, 186
linear momentum balance, 185–186
transitions between constituents, 185–186
reaction (back pressure), 199
rectangular box in phase space, 405
reduction map, 282
reference configuration, 10
reflection, 18
region
defined by weighting function, 72
geometric, scale $\varepsilon$, 51
occupied by a body, 7, 48
regular, 383
representations,
of homogeneous deformations, 363–365
of isometries, 363
matrix (of linear transformations), 318–320
of orthogonal linear transformations, 338–343
representative elementary volume (REV), 62, 197
reproducibility, 42, 281
reproducible behaviour, 1, 42
continuously, 281
resolution
angular, 35
spatial, 34
response functions, 225
for elastica, 239
relations for different observers, 240
for simple materials, 242
for viscous fluids, 243
restrictions on response functions due to objectivity, 239–248
elastica, 241
general materials, 247–248
simple materials, 243
viscous fluids, 245, 247
Index

REV, 62, 97
intrinsic average pressure in, 204
Riemann
integral, 383–389
sum, 210, 384
surface integral, 214
right-handed orthonormal basis, 313
rigid
body, 14, 18
dynamics, 17–24
motion, 17–18
deformation, 363
rocketry, 146–147
rotation, 342, 362
rotational momentum balance, 16–17, 22–23, 25–28
global form, 16, 22–23
interior form, 25–28
local form, 28
scalar multiplication of vectors, 310
scale
fine considerations, 115–129
limiting observational, 36
scale-dependency
of boundary, 2, 34
of mass density, 2, 36
of velocity, 2, 9, 39, 73
scales of mass, length and time, 113
second
law of thermodynamics, 301–302
moment of mass
density, 123
tensor, 21
principal invariant, 328–329
self-force, 80, 99, 111, 140, 212
assumption, 212
heating, 111, 161
semigroup property, 286
separation-dependent pair potentials, 107
series, Fourier, 65–66
Silling
interaction assumptions, 259–260
‘particle’, 259, 261
simple
balanced interaction stress tensor, 85–86, 90, 156
interaction
couple stress, 117
stress tensor, 82
materials, 242
stretch, 365
simultaneity, 226
Sk √\mathcal{V}, 318
skew symmetric linear transformation, 336–337
 corresponding axial vector, 337
solid body, 7
space
configuration, 263
euclidean, 357–359
momentum, 263
observer perception, 226–227
phase, 263

averaging, 2, 43, 133, 151–166, 185–187, 217–223
scales, 113, 281–282
span of cell, 62
spatial
imprecision, 60
localisation, 44–46
region occupied by body, 7, 48
resolution, 34
scale, 37
species, 167
spin
absolute, 246
dependence of stress and heat flux, 237, 242, 249–250, 252
field, 381
of rigid body, 20
tensor, 30, 381
vector field, 30, 382
square root of element of Sym+ √\mathcal{V}, 345
state
admissible micro-, 264
microscopic, 263
statistical mechanics, 263–289
steady flow, 206
stored energy, 109
stress tensor, 223
Cauchy, 3, 28, 82, 273
symmetry or otherwise, 128–129, 280
couple, 28, 117–121
diffusive, 223
for inertial observers, 233
interaction, 3, 82, 156, 176
balanced, 85–87, 156
comparison of candidates, 91–92
fluid-fluid, 190–191
Hardy-type, 86
Noll-type, 87
for mixture constituent, 171–174
thermal, 3
thermokinetic, 83, 175
stretching tensor field, 381
strict interior, 50
structured continua, 32, 295–296
subatomic considerations, 77–79, 110–114
summation convention, 313
superfluid helium, 250
superposed rigid motion of body, 242
of observer, 242
surface
couple density, 16
excess, 294
in phase space, 405
stress, 293
tension, 192, 293
