	<i>Preface</i>	<i>page</i> xiii
	<i>Acknowledgements</i>	xv
	<i>List of notation</i>	xviii
1	Introduction	1
	1.1 Source and channel coding	4
	1.2 The information theoretic view	6
	1.3 Structured codes	7
	1.4 Preview	8
2	Lattices	11
	2.1 Representation	11
	2.2 Partition	17
	2.3 Equivalent cells and coset leaders	21
	2.4 Transformation and tiling	25
	2.5 Algebraic constructions	29
	Summary	34
	Problems	35
	Interesting facts about lattices	37
3	Figures of merit	39
	3.1 Sphere packing and covering	39
	3.2 Quantization: normalized second moment	46
	3.3 Modulation: volume to noise ratio	49
	Summary	56
	Problems	56
	Historical notes	57
4	Dithering and estimation	59
	4.1 Crypto lemma	61
	4.2 Generalized dither	66

Contents

4.3	White dither spectrum	71
4.4	Wiener estimation	74
4.5	Filtered dithered quantization	78
	Summary	80
	Problems	80
	Historical notes	82
5	Entropy-coded quantization	84
5.1	The Shannon entropy	84
5.2	Quantizer entropy	85
5.3	Joint and sequential entropy coding*	89
5.4	Entropy-distortion trade-off	92
5.5	Redundancy over Shannon	94
5.6	Optimum test-channel simulation	98
5.7	Comparison with Lloyd's conditions	101
5.8	Is random dither really necessary?	102
5.9	Universal quantization*	103
	Summary	106
	Problems	106
	Historical notes	108
6	Infinite constellation for modulation	110
6.1	Rate per unit volume	110
6.2	ML decoding and error probability	112
6.3	Gap to capacity	114
6.4	Non-AWGN and mismatch	117
6.5	Non-equiprobable signaling	119
6.6	Maximum a posteriori decoding*	128
	Summary	131
	Problems	132
	Historical notes	133
7	Asymptotic goodness	134
7.1	Sphere bounds	137
7.2	Sphere-Gaussian equivalence	142
7.3	Good covering and quantization	147
7.4	Does packing imply modulation?	150
7.5	The Minkowski–Hlawka theorem	152
7.6	Good packing	154
7.7	Good modulation	156

7.8	Non-AWGN	162
7.9	Simultaneous goodness	164
	Summary	173
	Problems	174
	Historical notes	176
8	Nested lattices	178
8.1	Definition and properties	179
8.2	Cosets and Voronoi codebooks	181
8.3	Nested linear, lattice and trellis codes	185
8.4	Dithered codebook	189
8.5	Good nested lattices	192
	Summary	194
	Problems	195
	Historical notes	196
9	Lattice shaping	197
9.1	Voronoi modulation	199
9.2	Syndrome dilution scheme	204
9.3	The high SNR case	206
9.4	Shannon meets Wiener (at medium SNR)	212
9.5	The mod Λ channel	219
9.6	Achieving C_{AWGN} for all SNR	226
9.7	Geometric interpretation	233
9.8	Noise-matched decoding	234
9.9	Is the dither really necessary?	237
9.10	Voronoi quantization	240
	Summary	242
	Problems	243
	Historical notes	245
10	Side-information problems	247
10.1	Syndrome coding	250
10.2	Gaussian multi-terminal problems	259
10.3	Rate distortion with side information	262
10.4	Lattice Wyner–Ziv coding	267
10.5	Channels with side information	279
10.6	Lattice dirty-paper coding	283
	Summary	289
